☞ "Mr. Sheridan is the only orthoëpist who has accented this word on the first syllable, as I have done; for Dr. Johnson, Dr. Ash, Dr. Kenrick, Barclay, Fenning, Bailey, and Entick, accent the second. Its companion, *desultory*, is accented on the first syllable by Mr. Sheridan, Dr. Johnson, Mr. Nares, Mr. Smith, and Fenning, [and by J. F. E. Ja. K. Sm. R. Wb.]; but on the second by Dr. Ash, Dr. Kenrick, Mr. Scott, W. Johnston, Mr. Perry, Buchanan, Bailey, and Entick. As these two words must necessarily be accented alike, we see Dr. Johnson and Fenning [also J. K. Sm. R. Wb.] are inconsistent. But, though the majority of authorities are against me in both these words, I greatly mistake if analogy is not clearly on my side." *Walker.*

†SUB-SÛME, *v. n.* [*sub* and *sumo*, L.] To assume by consequence. *Hammond.*

SUB/TËL-TY, *n.* [*subtilité*, Fr.] Thinness; fineness; nicety; refinement;—cunning; artifice. See *SUBTLETY*.

SUBT/LE, (sût'l) *a.* Sly; artful; cunning; crafty; wily; acute. ☞ *Subtle* and *subtle* are often confounded with each other both in orthography and pronunciation, and also in the sense of *acute*; as, a "subtle reasoner," or a "subtle reasoner."

☞ "This word and *subtle* have been used almost indiscriminately to express very different senses, as may be seen in Johnson; but, as custom has adopted a different spelling and a different pronunciation, it is to be presumed it has not been without reason. That the first sense of the word, meaning *fine*, *acute*, &c., should extend itself to the latter, meaning *sly*, *artful*, &c., is not to be wondered at, as words have a tendency to fall into a bad sense; witness *knave*, *villain*, &c.; but, if custom has marked this difference of sense by a difference of spelling and pronunciation, it should seem to be an effort of nature to preserve precision in our ideas. If these observations are just, the abstracts of these words ought to be kept as distinct as their concretes: from *subtle* ought to be formed *subtily*, and from *subtle*, *subtly*; the *b* being heard in the two first, and mute in the two last." *Walker.*

SUBT/LE-NESS,* (sût'l'nes) *n.* Quality of being subtle. *Smart.*

SUBT/LE-TY,* (sût'l'tē) *n.* Artfulness; cunning; slyness.

SUBT/LE-LY, (sût'l'ē) *ad.* Slyly; artfully; cunningly; craftily.

And the doctrine of 'the apostolical succession,' as it is properly called, means the belief that the clergy, so regularly ordained, have a commission from God to preach the gospel, administer the sacraments and guide the church; that through their ministrations only we can derive the grace which is communicated by the sacraments. It follows, of course, that those sects of Christians which have no succession (having severed from Romanism without retaining ministers regularly ordained, or having subsequently interrupted the succession, that is, all

Protestant bodies, except the church of England) have, properly speaking, neither church nor sacraments, since they possess no apostolical authority. . . . The church of England does not affirm this doctrine in her Articles; and the language of Art. 19, although not excluding it, is plainly not such as would have been used by framers who wished to incutate it." *Brande*. — *Law of succession*, (*Law*) the law or rule according to which the succession to the property of deceased individuals is regulated.

☞ "This word is not infrequently pronounced with the accent on the second syllable, as if it were formed from *success*; but this accentuation, though agreeable to its Latin original, has, as in *confessor*, yielded to the prevailing power of the English antepenultimate accent. Dr. Johnson, Mr. Sheridan, Mr. Elphinston, and Entick accent this word on the first syllable; and Dr. Ash, Dr. Kenrick, W. Johnson, Mr. Perry, Buchanan, and Bailey, on the second; Jarboley and Fenning give both, but prefer the first; Mr. Scott gives both, and prefers the second; but, from the opinion that it foolishly goes forth, that we ought to accent words as near the beginning as possible, there is little doubt that the antepenultimate accent will prevail." *Walker*. — "This is one of the words over which fashion now relaxes its sway in favor of the more consistent accentuation." [sük-cés's'or.] *Smart*.

☞ The quantity of *n*, in the first syllable of this word, and its relatives *tenet*, *tenor*, and *tenure*, is one of the most puzzling difficulties of pronunciation. How dif-

ferently this letter is pronounced by different speakers, may be gathered from a view of those orthoepists who have marked the quantity of the vowels:—

<i>Sheridan,</i>	ténable,	ténet,	ténor,	ténure.
<i>Rich,</i>	ténable,	ténet,	ténor,	ténure.
<i>Nares,</i>	ténable,	—	ténor,	ténure.
<i>Ash,</i>	ténable,	ténet,	ténor,	ténure.
<i>Scott,</i>	ténable,	ténet,	ténor,	ténure.
<i>Entick,</i>	ténable,	ténet,	ténor,	ténure.
<i>Ferry,</i>	ténable,	ténet,	ténor,	ténure.
<i>W. Johnston,</i>	ténable,	ténet,	ténor,	ténure.
<i>Buchanan,</i>	ténable,	—	ténor,	ténure.
<i>Fry,</i>	ténable,	ténet,	ténor,	ténure.
<i>Smith,</i>	—	ténet,	—	—
<i>Elphinston,</i>	—	—	ténor,	—

"From this survey of our dictionaries, we find them uniform only in the word *tenor*. They are nearly equally divided on the word *tenet*; and, if similitude were to decide, it would be clearly in favor of the short vowel, in this word as well as in *tenor*. They are both Latin words, and both have the vowel short in the original. This, however, is no reason, with those who understand the analogy of English pronunciation, (for *tremor*, *minor*, &c., have the first vowel short in Latin,) but it sufficiently shows the partiality of the ear to the short vowel in words of this form, as is evident in the word *tenant*." Walker.

The following table exhibits a view of the pronunciation of *tenable*, *tenet*, and *tenure*, by the principal English orthoepists subsequent to Walker:—

TRÍP'HÓNG, (tríp'hóng) [tríp'hóng, S. W. P. J. F. Ja. Sm. R.; tríp'hóng, K.] n. [*tríceis* and *φόνγγη*.] A coalition of three vowels in one syllable or sound; a trigraph; as, *cau, eye*. ☞ Two aspirations in succession, says Mr. Elphinstone, seem disagreeable to an English ear, and therefore one of them is generally sunk. Thus *diphthong* and *triphthong* are pronounced *diphthong* and *triphthong*. P is lost, as well as *h*, in *apphthegm*; and therefore it is no wonder we hear the first *h* dropped in *ophthalmic* and *ophthalmic*, which is the pronunciation I have adopted, as agreeable to analogy. Nay, such an aversion do we seem to have to a succession of aspirates, that the *h* is sunk in

isthmus, *Esther*, and *Demosthenes* [?], because the *s*, which is akin to the aspiration, immediately precedes. Mr. Sheridan pronounces the first syllable of *ophthalmic* like *off*, but the first of *diphthong* and *triphthong* like *dip* and *trip*. Mr. Scott, W. Johnston, and Mr. Perry, pronounce *diphthong* and *triphthong* in the same manner as Mr. Sheridan. Dr. Kenrick gives no pronunciation to *diphthong*, but makes the *h* silent in *triphthong*; while Barclay pronounces the *h* in *ophthalmic*, but makes it either way in *diphthong*, and silent in *triphthong*. It may be remarked, that Dr. Jones, who wrote a spelling dictionary in Queen Anne's time, makes the *h* in those two words silent. *Walker*.

☞ The first mode [tríp'ód] of pronouncing this word is that which is adopted by Mr. Sheridan, Dr. Kenrick, Bailey, Buchanan, and Perry; and the second, by Dr. Ash, Mr. Nares, Mr. Scott, Entick, and Fry. I do not hesitate to pronounce the former most agreeable to English analogy. *Walker*.

ŪN, *n.* A Saxon prefix, equivalent in meaning to the privative *α* of the Greeks, and the privative *in* of the Latins. It is placed, at will, before adjectives and adverbs, and before perfect participles of active verbs, to form adjectives; and also before many present participles, and a considerable number of verbs and nouns.

When prefixed to adjectives, participles, and adverbs,

it is uniformly interpreted by *not*; in substantives, by the *want* or *absence* of; and in verbs, it almost always signifies the reversing or annulling of the action or state expressed by the verb. Nearly or quite all the words compounded with *un*, that are often met with, are here inserted. But some which are, or may be, legitimately formed, are doubtless omitted.—*Un* and *in* are in some cases used indifferently; as, *unalienable* or *inalienable*. See *IN*.

 ☞ “Dr. Hill published, in a pamphlet, a petition from the letters *I* and *U* to David Garrick, Esq., both complaining of terrible grievances imposed upon them by that great actor, who frequently banished them from their proper stations, as in the word *virtue*, which, they said, he converted into *virtue*; and, in the word *ungrateful*, he displaced the *u*, and made it *ingrateful*, to the great prejudice of the said letters. To this complaint Garrick replied in the following epigram:—
 ‘If it is, as you say, that I’ve injured a letter,
 I’ll change my note soon, and, I hope, for the better.
 May the right use of letters, as well as of men,
 Hereafter be fixed by the tongue and the pen.
 Most devoutly I wish they may both have their due,
 And that I may be never mistaken for *U*.’”
Walker.

WIND, [wínd or wínd, S. W. J. E. F. Ja. K. Cobbin; wínd, P. Sm. R. Wb. Kenrick.] *n.* Air in motion; a current in the atmosphere, conveying the air, with greater or less velocity, from one part to another; a current of air; a current, as coming from a particular point:—breath; breath modulated by an instrument:—air impregnated with scent:—flatulence; windiness:—anything insignificant, or light as wind.—*To go down the wind*, to decay.—*To take or have the wind*, to gain or have the advantage.

† “These two modes of pronunciation have been long contending for superiority, till at last the former [wínd] seems to have gained a complete victory, except in the territories of rhyme. . . . Mr. Sheridan tells us that Swift used to jeer those who pronounced *wínd* with the *i* short, by saying, ‘I have a great *wínd* to find why you pronounce it *wínd*.’ A very illiberal critic retorted this upon Mr. Sheridan by saying, ‘If I may be so bold, I should be glad to be *toold* why you pronounce it *goold*.’ . . . Mr. Sheridan and Mr. Scott give the same preference to the first sound of this word that I have done. Dr. Kenrick and Mr. Barclay give only the short sound. Mr. Perry joins them in this sound, but says in dramatic scenes it has the long one. Mr. Nares says it has certainly the short sound in common usage, but that all our best poets rhyme it with *wind*, *kind*, &c.; and Mr. Smith observes, that it is now the polite pronunciation, though against analogy.” *Walker*.

WIND, *v. a.* [i. WINDED; pp. WINDING, WINDED.] To ventilate:—to perceive or follow by the wind or scent:—to ride or drive (as a horse) so as to render scant of wind:—to rest (as a horse) in order to recover wind.

†**WÖT**, [wöt, S. W. P. J. F. Ja. K. Sm.; wüt, *Elphinston.*] *v. a. & n.* To know; to be aware. *Spenser.*—It is also the preterit of the obsolete verb to *wet*; and is used by old authors both in the present and imperfect tenses. See *WRET.*

WÖTE, *v.* Same as *wot.* See *Wor*, and *WRET.*

WOULD, (wüd) *v. auxiliary and defective;* implying inclination, wish, or desire. It is regarded as the preterit of *will*, and is used to form the past tense of the potential mood; but it is likewise used in the conditional present

tense. "He would have paid the bill yesterday, if he had been able." "He would pay it now, if he could." In the former instance, *would* is used in the past tense; and in the latter, in the conditional present.

Would is used in a particular manner to express a wish or prayer, as in the phrases *would God, would to God, would to Heaven, or simply would;* as, "Would God I had died for thee, O Absalom." 2 *Sam.* "Would to God you could bear with me." 2 *Cor.* "Would to Heaven," *Dryden.* "Would thou hadst hearkened to my words," *Milton.* "Would that they would take one side or the other." *Dr. Thomas Arnold.*

The following remarks are quoted from Dr. Johnson.—"Would has the signification of *I wish, or I pray.* This, I believe, is improper, and formed by a gradual corruption of the phrase *would God;* which originally imported, that *God would, might God will, might God decree.* From this phrase, ill understood, came "*would to God;*" thence "*Would to God;*" and thence *I would, or, elliptically, would, came to signify I wish—* and it is used even by good authors, but ought not to be imitated."

||**WOUND**, (wünd or wüänd) [wünd or wüänd, *W. P. J. Cobbin;* wünd, *S. Ja. K. Sm. R. Scott; wüänd, E. Wb. Nares, Kenrick.*] *n.* A hurt given to the body or animal frame by violence; an injury; a cut; a slash; laceration.

†**WOUND**, (wünd) *v. n.* "The first pronunciation of this word, [wünd,] though generally received among the polite world, is certainly a capricious novelty,—a novelty either generated by false criticism, to distinguish it from the preterit of the verb to *wind,* of which there was not the least danger of interference, or more probably from an affectation of the French sound of this diphthong, which, as in *pour,* and some other words, we find of late to have prevailed. The stage is in possession of this sound, and what Swift observes of newspapers, with respect to the introduction of new and fantastical words, may be applied to the stage, with respect to new and fantastical modes of pronunciation. That the other pronunciation was the established sound of the word, appears from the poets, who rhyme it with *bound, found, ground, and around;* and it is still so among the great bulk of speakers, who learn this sound at school, and are obliged to unlearn it again when they come into the conversation of the polite world. Mr. Sheridan, Mr. Scott, and Mr. Elphinston, adopt the first sound of this word; but Dr. Kenrick and W. Johnston the second: Mr. Perry gives both, but prefers the first; and though Mr. Smith, in his Vocabulary, has classed it with *sound* and *found,* he says *wound* is the common pronunciation. I am, however, of Mr. Nares's opinion, who says this pronunciation ought to be entirely banished. But where is the man bold enough to risk the imputation of vulgarity by such an expulsion?" *Walker.*—Smart styles wüänd "the old-fashioned, pronunciation."

||**WOUND**, (wünd or wüänd) *v. a.* [*i.* WOUNDED; *pp.* WOUNDING, WOUNDED.] To hurt the animal frame by violence; to hurt, to injure.

Y.

Y the twenty-fifth letter of the alphabet, is borrowed from the Greek *Y*, and is, at the beginning of words and syllables, a consonant, and in other situations a vowel, having the sound of *y*, and subject to the changes of this letter. It is used instead of *i* at the end of words, as *thy*; or when two *i* would come together, as in *dying*; and sometimes for the sake of distinction, as in the words *die and ye*.

||**YACHT**, (yòt) [yòt, *S. W. P. J. F. Ja. K. Sm.*; yòt, *E. Kenrick*.] *n.* [D.] A small ship or vessel of state, pleasure, or passage.

||**YAN**, *n.* A large esculent root, growing in tropical climates.

||**YAN'KEE**,* (yäng'ke) *n.* A cant term for an inhabitant of New England, and by some applied to the inhabitants of the United States indiscriminately. ☞ Different etymologies have been assigned to this word; but that of Heckewelder is perhaps the most probable one; viz., that it is a corruption of the word *English*, by the Indians of North America, which was pronounced by them *Yangees*. *J. A. Rev.* Jamieson, in his "Dictionary of the Scottish Language," has the word *yankie*, which he defines as follows:—"A sharp, clever woman, at the same time including an idea of forwardness."

||**YAN'Q-LITE**,* *n.* (*Min.*) Same as *arinite*. *Brande*.

||**YÄ**, *pron.* The nominative *pl.* of *Thou*.—It is never used but where the plural is really meant, and generally only in the solemn style. It is sometimes, especially in elder poetry, used in the objective case; as, "Vain pomp and glory of the world, I hate *ye*." *Shak*.

||**YÄ**, (yä or yē) [yä, *S. J. E. Ja. K. Sm. R.*; yē, *W. P. Wb.*; yä or yē, *F.*] *ad. Yēs*:—a particle of affirmation, correlative to *nay*:—a particle by which the sense is intended or enforced; not only so, but more than so. ☞ The word is antiquated, being now rarely used except in the solemn style.

☞ "Mr. Sheridan, Mr. Scott, W. Johnston, Mr. Smith, and Mr. Fry, pronounce this word so as to rhyme with *may*, *pay*, &c.; but Steele or Brightland, Dr. Jones, who wrote the 'New Art of Spelling,' in Queen Anne's time, Dr. Kenrick, and Mr. Perry, pronounce it like the pronoun *ye*. Though so many are against me, I do not hesitate to pronounce the latter mode the best; first, as it is more agreeable to the general sound of the diphthong; next, as it is more related to its familiar substitute *yes*, and, lastly, unless my memory greatly fails me, because it is always so pronounced when contrasted with *may*; as in that precept of the gospel, 'Let your communication be *ye*, *yea*, and *ay*, *nay*.'" *Walker*.

Most of the orthoëpists more recent than Walker pronounce this word *yä*.

||**YÄÄ**,* or **YÄÄ**, *n.* An affirmative vote; one who votes in the affirmative; same as *ay*. *Hastel*.—*Yeas* and *nays*, a list of the members of a legislative body voting in the affirmative and negative of a proposition.

||**YÄÄLL**, *a.* A hideous outcry; a cry of horror; a scream.

||**YÄÄL'ÖW**, (yäl'ö) [yäl'ö, *W. P. J. F. Ja. K. Sm. R.*; yäl'ö, *S. Nares*, *Scott*.] *a.* Being of a bright, gold-like color.

☞ "Mr. Sheridan, Mr. Nares, Mr. Scott, Dr. Jones, and Mr. Fry, pronounce this word as if written *yellow*, rhyming with *tallow*. But Dr. Kenrick, W. Johnston, Mr

Smith, and Mr. Perry, preserve the e in its pure sound, and rhyme the word with *mellou*. The latter mode is, in my opinion, clearly the best, both as more agreeable to analogy and the best usage; for I am much deceived if the former pronunciation do not border closely on the vulgar." Walker.

YEL'LOW, n. Yellow color; the color of gold; a golden hue.

YEO'MAN, (yö'man) [yö'man, *W. P. J. E. F. Ja. K. Sm. R. W. b.*; yem'man, *S. Scott, Smith, Barclay*; yüm'mun, *Kenrick*. n.; *pl.* YEO'MEN, (yö'men) A man of a small estate in land; a farmer; a gentleman farmer; — an upper servant in a nobleman's family: — an officer in the king of England's household: — a title of certain inferior military attendants, or foot-guards, called *yeomen of the guard*. — (*Naut.*) A seaman appointed to certain duties, as to attend to the store-rooms.

¶ Junius gives us a great variety of derivations of this word, but seems most to approve of that from *gæman*, in the old Frisic, signifying a countryman or villager; and this word is derived further, by Junius, from the Greek *yaia*, *yaín*, *yí*, which, he tells us, does not only signify the earth in general, but any great portion of land. Skinner says it may be derived from the Anglo-Saxon *gemane*, or the Teutonic *gemein*, a common man, or one of the commonalty; or from *ewemann*, a shepherd; from *goodman*, an appellation given to inferior people; from *gemana*, a companion; from *georgman*, a young man; from *jeman*, an ordinary man, or any body, like the Spanish *hidalgo*; but he prefers its derivation from the Anglo-Saxon *guma*, a painful or laborious man.

¶ But, however widely etymologists are divided in the derivation of this word, orthoëpists are not less divided in their pronunciation of it. Mr. Sheridan, Mr. Scott, Mr. Coote, (author of the 'Elements of Grammar,') Steele's Grammar, (published in Queen Anne's time,) Mr. Barclay, Mr. Smith, and Buchanan, pronounce it with the diphthong short, as if written *yemman*; Dr. Kenrick pronounces it as if written *yömmán*; Mr. Elphinston (who quotes Langham, the famous reformer of orthography in Queen Elizabeth's time, for the same pronunciation) sounds the *eo* like *ee*; and Dr. Jones, the author of the 'New Art of Spelling,' in Queen Anne's time, pronounces it in the same manner; to which we may add Ben Jonson, who says that *yeoman*, *people*, and *jeopardy*, were truer written *yemán*, *peple*, *jepardy*. But W. Johnston, Mr. Perry, Entick, and Fry, pronounce the *eo* like long, open *o*, as if written *yöman*; and this last appears to me to be the most received pronunciation. It is that which we constantly hear as applied to the king's body-guard, and it is that which has always been the pronunciation on the stage. — An authority which, in this case, may not, perhaps, improperly be called the best echo of the public voice. I well remember hearing Mr. Garrick pronounce the word in this manner, in a speech in King Lear: 'Tell me, fellow, is a madman a gentleman or a yöman?'" Walker.

YEO'MAN-LY, a. Of or belonging to a yeoman. *E. Jonson*.

YEO'MAN-RY, n. The collective body of yeomen; the collective body of farmers; husbandmen.

YÈRK, v. n. To move, as with jerks; to jerk; to wince. *Beaumont & Fl.* [R.]

YÈRK, n. A quick motion; a jerk. *Johnson*. [R.]

YERN, v. a. See YEARN.

YÈS, [yès, *P. E. Ja. Sm. R.*; yís, *S. W. J.*; yès or yís, *F. K.*] ad. A term of affirmation; the affirmative particle, opposed to *no*; yea. — It is, like yea, a word of enforcement; even so; not only so, but more.

¶ "This word is worn into a somewhat slenderer sound than what is authorized by the orthography; but *e* and *i* are frequently interchangeable, and few changes can be better established than this. W. Johnston and Mr. Perry are the only orthoëpists, who give the sound of the vowels, that do not mark this change; but Mr. Sheridan, Mr. Scott, Dr. Kenrick, Mr. Nares, Mr. Smith, and Dr. Jones, in his 'New Art of Spelling,' confirm this change, and rhyme it with *hiss*, *miss*, *bliss*, &c." Walker.

¶ "It is not probable that a polite speaker would, at this day, even on Mr. Walker's authority, pronounce the word *yès*, yís." Jamieson.

YÈS-A-WÀ-L,* n. A state messenger in India. *Crabb*.

YÈST, [yèst, *S. W. F. Ja.*; yèst or yèst, *P. J.*; yèst, *K. Sm. Nares*.] n. Barn; spume; foam; froth; yeast. — Now commonly written and pronounced *yeast*. See YEAST.

YÈS'tER, a. [*gestern*, *gestern*, *Sax.*; *hesternus*, *L.*; *hestern*, *old Engl.*] That was next before the present day. — It is not often used but in composition with *day* or *night*.

[YÈS'tER-DÄY, or YÈS'tER-DÄY, [yès'ter-dä, *W. P. J. E. F. Ja. Sm. R. W. b.*; yès'ter-dä, *S. Kenrick, Nares, Scott*] n. The day last past; the day next before to-day.

¶ "Though *yès*, from its continual use, is allowably worn into the somewhat easier sound of *yis*, there is no reason why *yesterday* should adopt the same change; and, though I cannot pronounce this change vulgar, since Mr. Sheridan, Dr. Kenrick, Mr. Nares, and Mr. Scott, have adopted it, I do not hesitate to pronounce the regular sound, given by W. Johnston, as the more correct and agreeable to the best usage." Walker. [Bacon]

[YÈS'tER-DÄY, or YÈS'tER-DÄY, ad. On the day last past.

[YÈS'tER-EVÈ,* or YÈS'tER-E'VEN-ING,* n. The evening last past. *Rome*.

YÈS'tY, a. Frothy; yeasty. *Shak*. See YEASTY.

YET, [yèt, *S. W. P. J. E. F. Ja. K. Sm. R.*; yèt or yit, *Kenrick*.] conj. Nevertheless; notwithstanding; however.

¶ "The *e* in this word is frequently changed by incorrect speakers into *i*; but, though this change is agreeable to the best and most established usage in the word *yès*, in *yèt* it is the mark of incorrectness and vulgarity.

¶ Dr. Kenrick is the only orthoëpist who gives any countenance to this incorrectness, by admitting it as a second pronunciation; but Mr. Sheridan, Mr. Scott, W. Johnston, Mr. Perry, and Mr. Smith, give the regular sound only." Walker.

YÈT, ad. Beside; over and above; still; once again; at this time; so soon; hitherto; thus far; at least; in a new degree; even; after all; hitherto, sometimes with *as* before it.

YÖÜ, (*yü*, when emphatic; *yu*, when otherwise,) [*yü*, *S. W. J. Ja. K.*; *yü* or *yu*, *Sm.*; *yü*, *P.*] *pron.* *personal*, *pl.* of *Thou*. [Nominative *ye* or *you*; possessive *yours*; objective *you*.] The person or persons spoken to. It is commonly used when a single individual is addressed, instead of *thou* or *thee*; but properly with a plural construction; as, “*you were*,” instead of “*thou wast*.” †*ye* “In the sentence, ‘Though he told you, he had no right to tell you,’ the pronoun *you*, having no distinctive emphasis, invariably falls into the sound of the antiquated form of this pronoun, *ye*.” *Walker*.

YÖUNG, (*yüing*) *a.* Being in the first or early part of life, as opposed to *old*;—used of animal, and also of vegetable, life:—not old; youthful; inexperienced.

YÖUR, (*yür*, when emphatic; *yur*, when otherwise,) [*yür*, *S. W. P. F. Ja. K.*; *yür* or *yür*, *J. Sm.*] *pron.* *possessive* or *adjective*. Belonging to you.—*Your* and *yours* are the possessive forms of *you*. *Your* is used when the thing

possessed follows; as, “*your* book;” otherwise *yours*, as, “*This* book is *yours*.”

†*ye* “This word is nearly under the same predicament as the pronoun *my*. When the emphasis is upon this word, it is always pronounced full and open, like the noun *ever*; as, ‘The moment I had read your letter, I sat down to write *mine*;’ but when it is not emphatic, it generally sinks into *yur*, exactly like the last syllable of *last-ye*; as, ‘I had just answered your first letter, as *yur* last arrived.’ Here, if we were to say, ‘I had just answered your first letter as *yur* last arrived,’ with *your* sounded full and open like *ever*, as in the former sentence, every delicate ear would be offended. This obscure sound of the possessive pronoun *your* always takes place when it is used to signify any species of persons or things in an indeterminate sense. Thus, Addison, speaking of those metaphors which professional men most commonly fall into, says, ‘Your men of business usually have recourse to such instances as are too mean and familiar.’ The pronunciation of *your*, in *yourself*, is a confirmation of these observations.” *Walker*.

YÖUR-SEL'F, (*yür-sel'f*) [*yür-sel'f*, *W. J. Ja. Sm.*; *yür-sel'f*, *P. F.*] *pron.* You; even you; the reciprocal form of you, when used for *thou* or *thee*.—*Yourselves*, (*yür-sel'vz*) the reciprocal form of *you* strictly used in the plural; as, “*You* saw it *yourself*,” (when one is addressed); “*You* saw it *yourselves*,” (when several are addressed).

THE EDITOR'S PREFACE.

THE following pages contain the whole of Walker's "Key to the Classical Pronunciation of Greek, Latin, and Scripture Proper Names," together with his "Introduction," "Rules," and "Notes," and also his "Observations on the Greek and Latin Accent and Quantity." To the Greek and Latin names inserted by Walker in his Key, have been here added, by the Editor, about 3,000 other Greek and Latin names. Of these additional names, about 2,400 have been taken from the "Classical Pronunciation of Proper Names, established by Citations from the Greek and Latin Poets, Greek Historians, Geographers, and Scholiasts," by Thomas Swinburne Carr, of King's College, London; between 500 and 600 are words which were added by the Rev. W. Trollope, A. M., one of the Masters of Christ's Hospital, London, in his edition of Walker's Key; and some have also been inserted, which were taken from Scheller's "Latin and German Lexicon."

The words standing in the Initial Vocabulary without a letter annexed to them, are words found in Walker's Key; and they are inserted with his pronunciation, the notation added to them being in general accordance with his principles. It is the same notation that is used in the preceding Dictionary. The words to which (C.) (T.) or (S.) are annexed, are taken respectively from Carr, Trollope, and Scheller.

There is a considerable number of the Greek and Latin names, in the pronunciation of which Carr differs from Walker. These names are repeated in the Initial Vocabulary, the pronunciation of Carr following that of Walker, having the letter (C.) annexed to it. In the pronunciation of a considerable number of words, Walker is influenced by English analogy and usage; but Carr adheres rigidly to classical authority, and has no regard to English analogy or English usage; and with respect to the pronunciation of the words which they pronounce differently, that of Carr is almost always better supported by classical authority, than that of Walker. Carr says of his work, — "The object of it is to determine the pronunciation of classical proper names solely on the basis of *classical authority*, — including, of course, metrical quotations, orthography, and etymology. . . . As it was the object of the author to establish the *classical* pronunciation of proper names, it was a matter of very secondary importance as to whether the accentuation of any particular name, if based upon classical authority, might coincide or not with that adopted by popular usage. It did not fall within the limits of his task 'to consult the English ear,' or to recognize the 'analogy of the English language,' as in the slightest degree competent to establish the pronunciation of dead languages, which can only be recovered from a perusal of their literary monuments now existing."

The few critical notes inserted by Mr. Trollope, in his edition of Walker's Key, in some of which he combats Walker's principles, are inserted in their proper

places; and the Editor has also added a very few notes of his own. Though some obvious errors, mostly typographical, in Walker's Key, have been corrected, yet the course pursued has been to allow Walker's pronunciation to stand as he intended it should. His decisions, however, are in many instances combated by other authorities.

The words added to the Initial Vocabulary of this edition of the Key, are not inserted in the Terminational Vocabulary. Walker inserted many words in the Terminational Vocabulary which he did not introduce into the Initial Vocabulary; and some words found in both are pronounced differently in the two Vocabularies. Some palpable inconsistencies and errors have been corrected; yet the Terminational Vocabulary remains, for the most part, as Walker left it.

The pronunciation of but a small part of the Scripture Proper Names can be determined by classical authority; and they are, therefore, much more subjected to the English analogy, than the Greek and Latin names. The pronunciation of most of these names, as given by Walker, is in accordance with general usage. There is, however, a considerable number of them respecting the pronunciation of which other respectable orthoëpists differ from him. These names stand in the Initial Vocabulary with Walker's pronunciation placed first, followed by the deviations from him of the following orthoëpists; namely, Oliver, Perry, Smart, Carr, and also Taylor, the editor of Calmet's "Dictionary of the Bible." In some cases, the deviations are, doubtless, to be preferred to Walker's mode.

The great addition now made to the vocabulary of Greek and Latin names in this work, and the exhibition of the authorities of other orthoëpists in relation to many of the Greek, Latin, and Scripture proper names, with regard to which the pronunciation of Walker is combated, will give this edition of his "Key" advantages over any other that has yet been published.

PREFACE.

THE "Critical Pronouncing Dictionary of the English Language" naturally suggested an idea of the present work. Proper names from the Greek and Latin form so considerable a part of every cultivated living language, that a dictionary seems to be imperfect without them. Polite scholars, indeed, are seldom at a loss for the pronunciation of words they so frequently meet with in the learned languages; but there are great numbers of respectable English scholars, who, having only a tincture of classical learning, are much at a loss for a knowledge of this part of it. It is not only the learned professions that require this knowledge, but almost every one above the merely mechanical. The professors of painting, statuary, and music, and those who admire their works; readers of history, politics, poetry; all who converse on subjects ever so little above the vulgar,—have so frequent occasion to pronounce these proper names, that whatever tends to render this pronunciation easy must necessarily be acceptable to the public.

The proper names in Scripture have still a higher claim to our attention. That every thing contained in that precious repository of divine truth should be rendered as easy as possible to the reader, cannot be doubted; and the very frequent occasions of pronouncing Scripture proper names, in a country where reading the Scripture makes part of the religious worship, seem to demand some work on this subject more perfect than any we have hitherto seen.

I could have wished it had been undertaken by a person of more learning and leisure than myself; but we often wait in vain, for works of this kind, from those learned bodies which ought to produce them, and at last are obliged, for the best we can get, to the labors of some necessitous individual. Being long engaged in the instruction of youth, I felt the want of a work of this kind, and have supplied it in the best manner I am able. If I have been happy enough to be useful, or only so far useful as to induce some abler hand to undertake the subject, I shall think my labor amply rewarded. I shall still console myself with reflecting, that he who has produced a prior work, however inferior to those that succeed it, is under a very different predicament from him who produces an after-work inferior to those that have gone before.

TO THE SECOND EDITION.

THE favorable reception of the first edition of this work has induced me to attempt to make it still more worthy of the acceptance of the public, by the addition of several critical observations, and particularly by two Terminational Vocabularies, of Greek and Latin, and Scripture, Proper Names. That so much labor should be bestowed upon an inverted arrangement of these words, when they had already been given in their common alphabetical order, may be matter of wonder to many persons, who will naturally inquire into the utility of such an arrangement. To these it may be answered, that the words of all languages seem more related to each other by their terminations

than by their beginnings; that the Greek and Latin languages seem more particularly to be thus related; and classing them according to their endings seemed to exhibit a new view of these languages, both curious and useful; for, as their accent and quantity depend so much on their termination, such an arrangement appeared to give an easier and more comprehensive idea of their pronunciation, than the common classification by their initial syllables. This end was so desirable, as to induce me to spare no pains, however dry and disgusting, to promote it; and, if the method I have taken has failed, my labor will not be entirely lost, if it convinces future prosodists that it is not unworthy of their attention.

TO BEEN RECORDED

happen, it is not much to be regretted, that, when they meet, they are scarcely intelligible to each other.*

But the English are accused not only of departing from the genuine sound of the Greek and Latin vowels, but of violating the quantity of these languages more than the people of any other nation in Europe. The author of the "Essay upon the Harmony of Language" gives us a detail of the particulars by which this accusation is proved; and this is so true a picture of the English pronunciation of Latin, that I shall quote it at length, as it may be of use to those who are obliged to learn this language without the aid of a teacher.

"The falsification of the harmony by English scholars, in their pronunciation of Latin, with regard to essential points, arises from two causes only; first, from a total inattention to the length of vowel sounds, making them long or short, merely as chance directs; and, secondly, from sounding double consonants as only one letter. The remedy of this last fault is obvious. With regard to the first, we have already observed, that each of our vowels hath its general long sound, and its general short sound, totally different. Thus the short sound of *e* lengthened is expressed by the letter *a*, and the short sound of *i* lengthened is expressed by the letter *e*; and, with all these anomalies usual in the application of vowel characters to the vowel sounds of our own language, we proceed to the application of vowel sounds to the vowel characters of the Latin. Thus, in the first syllable of *sidus* and *nomen*, which ought to be long, and of *miser* and *onus*, which ought to be short, we equally use the common long sound of the vowels; but, in the oblique cases, *sideris*, *nominis*, *miseri*, *oneris*, &c., we use quite another sound, and that a short one. These strange anomalies are not common to us with our southern neighbors, the French, Spaniards, and Italians. They pronounce *sidus*, according to our orthography, *seedus*, and, in the oblique cases, preserve the same long sound of the *i*. *Nomen* they pronounce as we do, and preserve, in the oblique cases, the same long sound of the *o*. The Italians also, in their own language, pronounce doubled consonants as distinctly as the two most discordant mutes of their alphabet. Whatever, therefore, they may want of expressing the true harmony of the Latin language, they certainly avoid the most glaring and absurd faults in our manner of pronouncing it.

"It is a matter of curiosity to observe with what regularity we use these solecisms in the pronunciation of Latin. When the penultimate is accented, its vowel, if followed but by a single consonant, is always long, as in Dr. Forster's examples. When the antepenultimate is accented, its vowel is, without any regard to the requisite quantity, pronounced short, as in *mirabile*, *frigidus*, except the vowel of the penultimate be followed by a vowel; and then the vowel of the antepenultimate is, with as little regard to true quantity, pronounced long, as in *maneo*, *redeat*, *odium*, *imperium*. Quantity is, however, vitiated to make *i* short, even in this case, as in *oblivio*, *vineæ*, *virium*. The only difference we make in pronunciation between *vineæ* and *venia* is, that to the vowel of the first syllable of the former, which ought to be long, we give a short sound; to that of the latter, which ought to be short, we give the same sound, but lengthened. *U*, accented, is always, before a single consonant, pronounced long, as in *humerus*, *fugiens*. Before two consonants no vowel sound is ever made long, except that of the diphthong *au*; so that, whenever a doubled consonant occurs, the preceding syllable is short.† Unaccented vowels we treat with no more ceremony in Latin than in our own language."—*Essay upon the Harmony of Language*, p. 224. Printed for Robson, 1774. [By William Mitford.]

This, it must be owned, is a very just state of the case; but, though the Latin quantity is thus violated, it is not, as this writer observes in the first part of the quotation, merely as chance directs, but, as he afterwards observes, regularly, and, he might have added, according to the analogy of English pronunciation, which, it may be observed, has a genius of its own, and which, if not so well adapted to the pronunciation of Greek and Latin as some other modern languages, has as fixed and settled rules for pronouncing them as any other.

The learned and ingenious author next proceeds to show the advantages of pronouncing our vowels so as to express the Latin quantity. "We have reason to suppose," says he, "that our usual accentuation of Latin, however it may want of many elegances in the pronunciation of the Augustan age, is yet sufficiently just to give, with tolerable accuracy, that part of the general har-

* "Erasmus se adfuisse olim commemorat, cum die quodam solenni complures principum legati ad Maximilianum Imperatorem salutandi causâ advenissent; singuloseque, Gallum, Germanum, Danum, Scotum, &c. orationem Latinam ita barbaram ac vastè pronuntiassent, ut Italici quibusdam nihil nisi risum moverent, qui eos non Latinè sed suâ quemque lingua, locutes jurassent."—*Middleton, De Lat. Lit. Pronun.*

† The love of the marvellous prevails over truth; and I question if the greatest diversity in the pronunciation of

Latin exceeds that of English at the capital and in some of the counties of Scotland; and yet the inhabitants of both have no great difficulty in understanding each other.

† This corruption of the true quantity is not, however, peculiar to the English; for Beza complains in his country: "Hinc enim fit ut in Græcâ oratione vel nullum, vel prorsus corruptum numerum intelligas, dum multæ breves producuntur, et contrâ plurimæ longæ corripuntur."—*Beza de Germ. Pron. Græcæ Lingue*, p. 50.

mony of the language, of which accent is the efficient. We have also pretty full information, from the poets, what syllables ought to have a long, and what a short quantity. To preserve, then, in our pronunciation, the true harmony of the language, we have only to take care to give the vowels a long sound or a short sound, as the quantity may require, and, when doubled consonants occur, to pronounce each distinctly." *Ibid.* p. 228.*

In answer to this plea for alteration, it may be observed, that, if this mode of pronouncing Latin be that of foreign nations, and were really so superior to our own, we certainly must perceive it in the pronunciation of foreigners, when we visit them, or they us. But I think I may appeal to the experience of every one who has had an opportunity of making the experiment, that, so far from the superiority on the side of the foreign pronunciation, it seems much inferior to our own. I am aware of the power of habit, and of its being able, *on many occasions, to make the worse appear the better reason*; but, if the harmony of the Latin language depended so much on a preservation of the quantity as many pretend, this harmony would surely overcome the bias we have to our own pronunciation, especially if our own were really so destructive of harmony as it is said to be. Till, therefore, we have a more accurate idea of the nature of quantity, and of that beauty and harmony of which it is said to be the efficient in the pronunciation of Latin, we ought to preserve a pronunciation which has naturally sprung up in our own soil, and is congenial to our native language. Besides, an alteration of this kind would be attended with so much dispute and uncertainty, as must make it highly impolitic to attempt it.

The analogy, then, of our own language being the rule for pronouncing the learned languages, we shall have little occasion for any other directions for the pronunciation of the Greek and Latin proper names, than such as are given for the pronunciation of English words. The general rules are followed almost without exception. The first and most obvious powers of the letters are adopted, and there is scarcely any difficulty but in the position of the accent; and this depends so much on the quantity of the vowels, that we need only inspect a dictionary to find the quantity of the penultimate vowel, and this determines the accent of all the Latin words; and, it may be added, of almost all Greek words likewise.† Now, in our pronunciation of Latin words, whatever be the quantity of the first syllable in a word of two syllables, we always place the accent on it; but in words of more syllables, if the penultimate be long, we place the accent on that; and if short, we accent the antepenultimate.

The rules of the Latin Accentuation are comprised, in a clear and concise manner, by Sanctius within four hexameters:

"Accentum in se ipsâ monosyllaba dictio ponit.
Exacuit sedem dissyllabon omne priorem.
Ex tribus, extollit primam penultima curta:
Extollit se ipsam quando est penultima longa."

These rules I have endeavored to express in English verse:

Each monosyllable has stress of course:
Words of two syllables the first enforce:
A syllable that's long, and last but one,
Must have the accent upon that or none;
But, if this syllable be short, the stress
Must on the last but two its force express.

The only difference that seems to obtain between the pronunciation of the Greek and Latin languages is, that, in the Latin, *ti* and *si*, preceded by an accent, and followed by another vowel forming an improper diphthong, are pronounced, as in English, like *sh* or *zh*; as, *natio, nation*; *persuasio, persuasion*, &c.; and that, in the Greek, the same letters retain their pure sound, as *φιλιαντία, ἀγνωσία, προβάτιον, &c.* This difference, however, with very few exceptions, does not extend

* By what this learned author has observed of our vicious pronunciation of the vowels, by the long and short sound of them, and from the instances he has given, he must mean that length and shortness which arise from extending and contracting them, independently of the obstruction which two consonants are supposed to occasion in forming the long quantity. Thus we are to pronounce *manus* as if written *man-nus*; and *pannus* as if written *pan-nus*, or as we always hear the word *panis*, (bread) for in this sound of *pannus* there seems to be no necessity for pronouncing the two consonants distinctly, or separately, which he seems to mean by distinctly, because the quantity is shown by the long sound of the vowel; but if by distinctly he means separately, — that is, as if what

is called in French the *schéva*, or mute *e*, were to follow the first consonant, — this could not be done without adding a syllable to the word; and the word *pannus* would in that case certainly have three syllables, as if written *pan-ch-nus*. — See *Observations on the Greek and Latin Accent and Quantity*, sect. 24.

† That is, in the general pronunciation of Greek; for, let the written accent be placed where it will, the *quantitative* accent, as it may be called, follows the analogy of the Latin.

‡ "The Greek language," says the learned critic, "was happy in not being understood by the Goths, who would as certainly have corrupted the *t* in *aitia, orion, &c.*, into *aitoa, woiou, &c.*, as they did in the Latin *motio* and *doceo*

to proper names, which, coming to us through, and being mingled with, the Latin, fall into the general rule. In the same manner, though in Greek it was an established maxim, that, if the last syllable were long, the accent could scarcely be higher than the penultimate, yet, in our pronunciation of Greek, and particularly of proper names, the Latin analogy of the accent is adopted; and, though the last syllable is long in *Demosthenes*, *Aristophanes*, *Theramenes*, and *Deiphobe*, yet, as the penultimate is short, the accent is placed on the antepenultimate, exactly as if they were Latin.†

As these languages have been long dead, they admit of no new varieties of accent, like the living languages. The common accentuation of Greek and Latin may be seen in Lexicons and Graduses; and where the ancients indulged a variety, and the moderns are divided in their opinions about the most classical accentuation of words, it would be highly improper, in a work intended for general use, to enter into the thorny disputes of the learned; and it may be truly said, in the rhyming adage,

"When doctors disagree,
Disciples then are free."

This, however, has not been entirely neglected. Where there has been any considerable diversity of accentuation among our prosodists, I have consulted the best authorities, and have sometimes ventured to decide; though, as Labbe says, "*Sed his de rebus, ut aliis multis, malo doctiorum judicium expectare, quam meam in medium proferre sententiam.*"

But the most important object of the present work is settling the *English quantity*, (see Rules 20, 21, 22,) with which we pronounce Greek and Latin proper names, and the sounds of some of the consonants. These are points in a state of great uncertainty, and are to be settled, not so much by a deep knowledge of the dead languages, as by a thorough acquaintance with the analogies and general usage of our own tongue. These must, in the nature of things, enter largely into the pronunciation of a dead language; and it is from an attention to these, that the author hopes he has given to the public a work not entirely unworthy of their acceptance.

§ There is unquestionably much sound sense and solid argument in the remarks contained in our author's Introduction; and the affectation with which the Greek and Latin languages are sometimes pronounced is, to say the least, extremely ridiculous. At the same time, it would not be amiss to adopt some uniform mode of pronunciation, by which the true quantity of the words, and some portion, at least, of their ancient character, might be retained. The chief defect in the English pronunciation consists in the false analogy of the vowel sounds, and the corrupt inflection of the consonants *c*, *g*, *s*, *t*, before some of the vowels. This cannot, of course, be remedied, without departing, in some slight degree, from the general rules of our own language; but, if no sounds were introduced but those which are familiar to an English ear, though not perfectly in accordance with the usage of the English tongue, the trifling appearance of harshness or formality, which a closer approximation to the correct pronunciation might possess, would gradually wear away, and be amply compensated by its greater accuracy. Now, in order to attain this end, it will only be necessary to affix to each vowel its distinctive long and short quantity, and to confine the above-named consonants invariably to the same sound. The precise rules for pronouncing these letters will be given in their proper places; without interfering, however, with those of Mr. Walker, which, with the exception alluded to, are clear, correct, and explicit, and, for those who prefer to adhere to the English pronunciation, the best, without any exception, that can be adopted. — TROLLOPE.]

into *moshio* and *dosheo*.* This, however, may be questioned; for if, in Latin words, this impure sound of *t* takes place only in those words where the accent is on the preceding vowel, as in *natio*, *facio*, &c., but not when the accent follows the *t*, and is on the following vowel, as in *societas*, *societas*, &c., why should we suppose any other mode of pronunciation would have been adopted by the Goths in their pronouncing the Greek? Now, no rule of pronunciation is more uniform, in the Greek language, than that which places an acute on the *iota* at the end of words, when this letter is succeeded by a long vowel; and consequently, if the accent be preserved upon the proper letter, it is impossible the preceding *t* and *s* should go into the sound of *sh*. Why, therefore, may we not suppose that the very frequent accentuation of the penultimate *i* before a final vowel preserved the preceding *r* from going into the sound of *sh*, as it was a difference of accentuation that occasioned this impure sound of *t* in the Latin language? For though *i*, at the end of words, when followed by a long vowel, or a vowel once long and afterwards contracted, had always the accent on it in Greek, in Latin the accent was always on the preceding syllable in words of this termination; and hence seems to have arisen the corruption of *t* in the Gothic pronunciation of the Latin language.

It is highly probable, that, in Lucian's time, the Greek *r*, when followed by *i* and another vowel, had not assumed the sound of *σ*; for the sigma would not have failed to accuse him of a usurpation of her powers, as he had done of her character; and, if we have preserved the *r* pure in this situation when we pronounce Greek, it is, perhaps, rather to be placed to the preserving power of the accented *i* in so great a number of words, than any adherence to

* Ainsworth on the letter *T*.

the ancient rules of pronunciation, which invariably affirm that the consonants had but one sound; unless we except the *γ* before *γ*, *κ*, *χ*, *ξ*; as *ἀγγελος*, *ἀγκυρα*, *ἀγγισια*, *κ. τ. λ.*, where the *γ* is sounded like *ν*. But this, says Henry Stephens, is an error of the copyists, who have a little extended the bottom of the *ν*, and made a *γ* of it; for, says he, it is ridiculous to suppose that *ν* was changed into *γ*, and at the same time that *γ* should be pronounced like *ν*. On the contrary, Scaliger says, that where we find a *ν* before these letters, as *ἀγκυρα*, it is an error of the copyists, who imagined they better expressed the pronunciation by this letter, which, as Vossius observes, should seem to demand something particular and uncommon.

It is reported of Scaliger that, when he was accosted by a Scotchman in Latin, he begged his pardon for not understanding him, as he had never learned the Scotch language. If this were the case with the pronunciation of a Scotchman, which is so near that of the continent, what would he have said to the Latin pronunciation of an Englishman? I take it, however, that this diversity is greatly exaggerated.

† This, however, was contrary to the general practice of the Romans; for Victorinus, in his Grammar, says, "*Græca nomina, si isidem literis proferruntur, (Latinò versa,) Græcos accentus habebunt: nam cum dicimus Thyas, Nais, autem habebit posterior accentum; et cum Themistio, Calypso, Theano, ultimam circumflexi videbimus, quod utrumque Latinus sermo non patitur, nisi admodum raro.*" "If Greek nouns turned into Latin are pronounced with the same letters, they have the Greek accent; for, when we say *Thyas*, *Nais*, the latter syllable has the acute accent; and when we pronounce *Themistio*, *Calypso*, *Theano*, we see the last syllable is circumflexed; neither of which is ever seen in Latin words, or very rarely." — *Serrius. Forster. Reply*, p. 31, Notes 32, bott.

FOR PRONOUNCING THE VOWELS OF

GREEK AND LATIN PROPER NAMES.

1. EVERY vowel with the accent on it, at the end of a syllable, is pronounced, as in English, with its first long, open sound. Thus *Ca'to*,* *Philome'la*, *Ori'on*, *Pho'cion*, *Lu'cifer*, &c., have the accented vowels sounded exactly as in the English words *pa'per*, *me'tre*, *spi'der*, *no'ble*, *tu'tor*, &c.

2. Every accented vowel, not ending a syllable, but followed by a consonant, has the short sound, as in English. Thus *Man'tius*, *Pen'theus*, *Pin'darus*, *Col'chis*, *Cur'tius*, &c., have the short sound of the accented vowels, as in *man'ner*, *plen'ty*, *prin'ter*, *coll'ar*, *cur'few*, &c.

3. Every final *i*, though unaccented, has the long, open sound. Thus the final *i*, forming the genitive case, as in *magis'tri*, or the plural number, as in *De'cii*, has the long, open sound, as in *vi'al*; and this sound we give to this vowel, in this situation, because the Latin *i* final, in genitives, plurals, and preterperfect tenses of verbs, is always long; and consequently, where the accented *i* is followed by *i* final, both are pronounced with the long diphthongal *i*, like the noun *eye*, as *Achi'vi*.†

4. Every unaccented *i*, ending a syllable not final, as that in the second of *Alcibiades*, the *Hernici*, &c., is pronounced like *e*,‡ as if written *Alcebiades*, the *Herneci*, &c. So the last syllable but one of the *Fabii*, the *Horatii*, the *Curii*, &c., is pronounced as if written *Fa-be-i*, *Ho-ra-she-i*, *Cu-re-a-she-i*; § and therefore, if the unaccented *i*, and the diphthong *æ*, con-

clude a word, they are both pronounced like *e*,|| as *Harpyiæ*, *Har-py'e-e*.

5. The diphthongs *æ* and *æ*, ending a syllable with the accent on it, are pronounced exactly like the long English *e*, as *Cæsar*, *Cæta*, &c., as if written *Cee'sar*, *E'ta*, &c.; and like the short *e*, when followed by a consonant in the same syllable, as *Dædalus*, *E'dipus*, &c., ¶ pronounced as if written *Deddalus*, *Eddipus*, &c. The vowels *ei* are generally pronounced like long *i*.** For the vowels *eu*, in final syllables, see the word *IDOMENEUS*; and for the *ou* in the same syllables, see the word *ANTINOÛS*, and similar words, in the Terminational Vocabulary.

6. *Y* is exactly under the same predicament as *i*. It is long when ending an accented syllable, as *Cy'rus*; or when ending an unaccented syllable, if final, as *Æ'gy*, *Æ'py*, &c.; short when joined to a consonant in the same syllable, as *Lyc'i'das*; and sometimes long and sometimes short when ending an initial syllable not under the accent, as *Ly-cur'gus*, pronounced with the first syllable like *lie*, a falsehood; and *Lysimachus*, with the first syllable like the first of *legion*, or nearly as if divided into *Lys-im'a-chus*, &c.

7. *A*, ending an unaccented syllable, has the same obscure sound as in the same situation in English words; but it is a sound bordering on the Italian *a*, or the *a* in *fa-ther*, as *Dia'na*, where the difference between the accented and unaccented *a* is palpable.

8. *E* final, either with or without the preceding

* This pronunciation of *Cato*, *Plato*, *Cleopatra*, &c., has been but lately adopted. Quin, and all the old dramatic school, used to pronounce the *a*, in these and similar words, like the *a* in *father*. Mr. Garrick, with great good sense, as well as good taste, brought in the present pronunciation, and the propriety of it has made it now universal.

† This is the true analogical pronunciation of this letter when ending an accented syllable; but a most disgraceful affectation of foreign pronunciation has exchanged this full diphthongal sound for the meagre, squeezed sound of the French and Italian *i*, not only in almost every word derived from those languages, but in many which are purely Latin; as, *Faustina*, *Messalina*, &c. Nay, words from the Saxon have been equally perverted, and we hear the *i* in *Elfrida*, *Edwina*, &c., turned into *Elfreeda*, *Edwæna*, &c. It is true this is the sound the Romans gave to their *i*; [This is by no means certain. — TROLLOPE.] but the speakers here alluded to are perfectly innocent of this, and do not pronounce it in this manner for its antiquity, but its novelty.

‡ [This arises from the more rapid pronunciation of the vowel, which is short. — TROLLOPE.]

§ [See below on Rule 10. — TROLLOPE.]

|| [The *i* is rapidly pronounced, the voice resting upon the final diphthong. — TROLLOPE.]

¶ [This is certainly incorrect. Diphthongs are pronounced long wherever they occur; as, *Deedalus*, *Eedipus*, &c. The Latins doubtless distinguished between the sound of *a* and *æ*, as the Greeks between the corresponding diphthongs *ai* and *oi*; but this difference cannot be readily accommodated to the English pronunciation. — TROLLOPE.]

[It may be said, that, in Greek and Latin poetry, diphthongs are always regarded as long; but it surely cannot be said, with truth, that in English they are always "pronounced long, wherever they occur." Various other orthoepists adhere to the rule which Walker adopts in relation to the pronunciation of these diphthongs; and general usage, among good speakers, is in accordance with it. And this, not only in proper names: the diphthong in the word *assafoetida*, for example, is pronounced like short *e*, both by the orthoepists and by general usage. — EDITOR.]

** See *Elegia*, *Hygeia*, &c., in the Terminational Vocabulary of Greek and Latin Proper Names. [The statement of Walker, that "the vowels *ei* are generally pronounced like *i* long," is not in accordance with his remarks in his notes relating to the terminations *eia* and *eius*, in the Terminational Vocabulary. In these notes, he decides in favor of placing the accent on the *e*, and permitting the *i*, as *y* consonant, to articulate the succeeding vowel; as, *Ele-ge'ia*, (el-e-je'ya.) See these notes, pp. 594 and 304. — EDITOR.]

consonant, always forms a distinct syllable; as, *Penelope*, *Hippocrene*, *Evoc*, *Amphitrite*, &c. When any Greek or Latin word is Anglicized into this termination, by cutting off a syllable of the original, it becomes then an English word, and is pronounced according to our own analogy. Thus *Acidalius*, altered to *Acidale*, has the final *e* sunk, and is a word of three syllables only; *Proserpine*, from *Proserpina*, undergoes the same alteration. *Thebes* and *Athens*, derived from the Greek *Θῆβαι* and *Ἀθῆναι*, and the Latin *Thebæ* and *Athenæ*, are perfectly Anglicized; the former into a monosyllable, and the latter into a dissyllable; and the Greek *Κρήτη* and the Latin *Creta* have both sunk into the English monosyllable *Crete*. *Hecate*, likewise pronounced in three syllables when Latin, and in the same number in the Greek word *Ἑκάτη*, in English is universally contracted into two, by sinking the final *e*. Shakspeare seems to have begun, as he has now confirmed, this pronunciation, by so adapting the word in "Macbeth":

"Why, how now, Hecat? you look angrily."—*Act IV.*

Perhaps this was no more than a poetical license to him; but the actors have adopted it in the songs in this tragedy:

"*He-cate, He-cate, come away.*"—

And the play-going world, who form no small portion of what is called the better sort of people, have followed the actors in this word, and the rest of the world have followed them.

The Roman magistrate, named *ædilis*, is Anglicized by pronouncing it in two syllables, *æ'dile*. The capital of Sicily, *Syracuse*, of four syllables, is made three in the English *Syracuse*; and the city of *Tyrus*, of two syllables, is reduced to a monosyllable in the English *Tyre*.

Rules for Pronouncing the Consonants of Greek and Latin Proper Names.

9. *C* and *G* are hard before *a*, *o*, and *u*; as, *Cato*, *Comus*, *Cures*, *Galba*, *Gorgon*, &c.; and soft before *e*, *i*, and *y*; as, *Cebes*, *Scipio*, *Scylla*, *Cinna*, *Geryon*, *Geta*, *Gillus*, *Gyges*, *Gymnosophista*, &c.*

10. *T*, *S*, and *C*, † before *ia*, *ie*, *i*, *io*, *iu*, and *eu*,

* That this general rule should be violated by smatterers in the learned languages, in such words as *gymnastic*, *heterogeneous*, &c., is not to be wondered at; but that men of real learning, who do not want to show themselves off to the vulgar by such innuendoes of their erudition, should give in to this irregularity, is really surprising. We laugh at the pedantry of the age of James I., where there is scarcely a page in any English book that is not sprinkled with twenty Greek and Latin quotations, and yet do not see the similar pedantry of interlarding our pronunciation with Greek and Latin sounds, which may be affirmed to be a greater perversion of our language than the former. In the one case, the introduction of Greek and Latin quotations does not interfere with the English phraseology; but, in the other, the pronunciation is disturbed, and a motley jargon of sounds introduced, as inconsistent with true taste as it is with neatness and uniformity.

[This censure is more severe than just. It is certain that these consonants were uniformly pronounced hard, by the Latins, before all the vowels indifferently; *c* like *k*, and *g* like the English *g* in *gun*. This is proved with respect to *c* by the Greek writers, who always spell Latin names in which it occurs with *k*; as *Κικέρων*, *Σκάρπιων*, for *Cicero*, *Scipio*. On the other hand, the Romans express the Greek *k* by *c*; as *Cimon* for *Κίμων*. Hence Quintilian observes, *C est litera, que ad omnes vocales vim suam perferat*. The hard sound of *g* is also apparent from words derived from the Greek, where *y* is always represented by *g*; and that the analogy of sound is strictly preserved, is especially manifest in such words as *angelus*, from the Greek *ἄγγελος*. In these words, the final *y* was always pronounced like *v*; and,

preceded by the accent, in Latin words, as in English, change into *sh* and *zh*; as, *Tatian*, *Statius*, *Portius*, *Portia*, *Sosius*, *Caduceus*, *Accius*, *Helvetii*, *Mæsia*, *Hesiod*, &c., pronounced *Tushean*, *Stusheus*, *Porsheus*, *Porshea*, *Sosheus*, *Cadusheus*, *Aksheus*, *Helveshei*, *Mezhea*, *Hezheod*, &c. But when the accent is on the first of the diphthongal vowels, the preceding consonant does not go into *sh*, but preserves its sound pure; as, *Miltiades*, *Antiates*, &c.

11. *T*, *S*, and *C*, in proper names ending in *tia*, *tia*, *cyon*, and *sion*, preceded by the accent, are changed into *sh* and *zh*. Thus *Phocion*, *Sicyon*, and *Cercyon*, are pronounced exactly in our own analogy, as if written *Phosheon*, *Sisheon*, and *Sersheon*; *Artemisia* and *Aspasia* sound as if written *Artemizhea* and *Aspazhea*; *Galatia*, *Aratia*, *Alotia*, and *Batia*, as if written *Galashea*, *Arashea*, *Aloshea*, and *Bashea*; and, if *Atia*, the town in Campania, is not so pronounced, it is to distinguish it from *Asia*, the eastern region of the world. But the termination *tion* (of which there are not even twenty examples in proper names throughout the whole Greek and Latin languages) seems to preserve the *t* from going into *sh*, as the last remnant of a learned pronunciation, and to avoid, as much as possible, assimilating with so vulgar an English termination. Thus, though *Æsion*, *Iasion*, *Dionysion*, change the *s* into *z*, as if written *Æzion*, *Iazion*, *Dionyzion*, the *z* does not become *zh*; but *Philistion*, *Gratcion*, *Eurytion*, *Androtion*, *Hippotcion*, *Iphitcion*, *Ornytion*, *Metion*, *Polytion*, *Stratcion*, *Sotcion*, *Pallantion*, *Ation*, *Harpocratcion*, and *Amphictycon*, preserve the *t* in its true sound. *Hephestion*, however, from the frequency of appearing with *Alexander*, has deserted the small class of his Greek companions, and joined the English multitude, by rhyming with *question*; and *Tatian* and *Theodotion* seem perfectly Anglicized. With very few exceptions, therefore, it may be concluded that Greek and Latin proper names are pronounced alike, and that both of them follow the analogy of English pronunciation.

12. *Ch*. These letters, before a vowel, are always pronounced like *k*; as, *Chabrias*, *Colchis*, &c.; but, when they come before a mute consonant, at the beginning of a word, as in *Chthonia*, they are mute, and the word is pronounced as if written *Thonia*. Words

as this sound is preserved in the Latin by a change of letter, it follows that the *g*, which represents the second *y*, agrees with it in sound also. Since, therefore, the true pronunciation of these letters, *c* and *g*, corresponds with their English pronunciation before certain vowels, there is no great violence done to the harmony of language by adopting it, in Latin proper names, before all. — TROLLOPE.]

† [The uniform and single sound of *c* has been noted in the note on the preceding rule; that of *s* and *t* were doubtless also single and uniform. That *s* had but one sound, like that of the English in *sun*, is evident from the Greek usage of the letter, and from the silence of all the old grammarians as to any variety in its pronunciation, — a remark which, by the way, will apply to all the consonants generally. With respect to *t*, the only difficulty regards the syllable *ti*, when followed by a vowel, as in the examples given in the rule. There is no doubt that *ti* was always pronounced alike by the Latins, whatever was the place of the accent; so that it was the same in *Miltiades* and *Tatian*, except that in the former it was *long*, and in the latter *short*, and therefore uttered with greater rapidity. This is evident from words common both to the Greeks and Romans, with the former of whom the pronunciation of *τ* never varies. In Latin names, also, the Greeks always retain the same letters, and *vice versa*. Thus we have *Τίτιος*, *Titius*; and *Ποσειδωνίων* *Seu*, *Pessiumianum Deum*, Herod. l. 11. It does not appear, indeed, that any sound like *sh* or *zh* was known to the Romans; nor is it likely that they pronounced the same letter differently in declining the same word; as, nom. pl. *artes*, gen. *arshium*, dat. *artibus*, &c. These observations are equally applicable to the next rule. — TROLLOPE.]

beginning with *sche*, as *Schedius*, *Scheria*, &c., are pronounced as if written *Skedius*, *Skeria*, &c.; and *c* before *n*, in the Latin pronomen *Cneus*, or *Cneus*, is mute; so in *Cnopus*, *Cnosus*, &c., and before *t* in *Cteatus*, and *g* before *n* in *Gnidus*,—pronounced *Nopus*, *Nossus*, *Teatus*, and *Nidus*.*

13. At the beginning of Greek words, we frequently find the uncombinable consonants *mn*, *tn*, &c.; as, *Mnemosyne*, *Mnesidamus*, *Mneus*, *Mnesteus*, *Tmolus*, &c. These are to be pronounced with the first consonant mute, as if written *Nemosyne*, *Nesidamus*, *Neus*, *Nesteus*, *Molus*, &c., in the same manner as we pronounce the words *Bdelium*, *Pneumatic*, *Gnomon*, *Mnemonics*, &c., without the initial consonant. The same may be observed of the *c* hard like *k*, when it comes before *t*, as *Ctesiphon*, *Ctesippus*, &c. Some of these words we see sometimes written with an *e* or *i* after the first consonant, as *Menesteus*, *Timolus*, &c., and then the initial consonant is pronounced.

14. *Ph*, followed by a consonant, is mute; as, *Phthia*, *Phthiotis*, pronounced *Thia*, *Thiotis*, in the same manner as the naturalized Greek word *Phthisic*, pronounced *Tisic*.

15. *Ps*:—*p* is mute also in this combination, as in *Psyche*, *Psammetichus*, &c., pronounced *Sylee*, *Sammeticus*, &c.

16. *Pt*:—*p* is mute in words beginning with these letters, when followed by a vowel; as, *Ptolemy*, *Pterilas*, &c., pronounced *Tolemy*, *Terilas*, &c.; but, when followed by *l*, the *t* is heard, as in *Ptolemy*; for, though we have no words of our own with these initial consonants, we have many words that end with them, and they are certainly pronounced. The same may be observed of the *z* in *Zmilaces*.

17. The letters *s*, *x*, and *z*, require but little observation, being generally pronounced as in pure English words. It may, however, be remarked, that *s*, at the end of words, preceded by one of the vowels but *e*, has its pure hissing sound; as, *mas*, *dis*, *os*, *mus*, &c.; † but, when *e* precedes, it goes into the sound of *z*; as, *pes*, *Thersites*, *vates*, &c. It may also be observed, that, when it ends a word preceded by *r* or *n*, it has the sound of *z*. Thus the letter *s*, in *mens*, *Mars*, *mors*, &c., has the same sound as in the English words *hens*, *stars*, *wars*, &c. *X*, when beginning a word or syllable, is pronounced like *z*; as, *Xerxes*, *Xenophon*, &c., are pronounced *Zerkzes*, *Zenophon*, &c. *Z* is uniformly pronounced as in English words. Thus the *z* in *Zeno* and *Zeugma* is pronounced as we hear it in *zeal*, *zone*, &c.

Rules for Ascertaining the English Quantity of Greek and Latin Proper Names.

18. It may at first be observed, that, in words of two syllables, with but one consonant in the middle, what-

* [These letters are not absolutely mute, being accompanied with a small guttural tone, sufficient to indicate their effect upon the pronunciation. So in the next rule, the remark at the end of which proves that the guttural sound was so as to have nearly the same effect as the insertion of a vowel. Rules 14, 15, 16, are subject to the same remark. The word *Tropletemus*, in Rule 16, can hardly be considered of the same class.—TROLOPE.]

† [Not only so, but in all cases, as before remarked; neither with *e*, *r*, or *a* preceding, is *s* necessarily pronounced like *z*.—TROLOPE.]

‡ The only word occurring to me, at present, where this rule is not observed, is *canon*, a rule, which is always pronounced like the word *canon*, a piece of ordnance.

[Considerable difference, however, was made by the Romans between the long and short vowels, by pronouncing the latter more rapidly than the former. Probably a kind

ever be the quantity of the vowel in the first syllable in Greek or Latin, we always make it long in English. Thus *Crates*, the philosopher, and *crates*, a hurdle; *decus*, honor, and *dedo*, to give; *ovo*, to triumph, and *ovum*, an egg; *Numa*, the legislator, and *Numen*, the divinity, have the first vowel always sounded equally long by an English speaker, although, in Latin, the first vowel in the first word of each of these pairs is short. †

19. On the contrary, words of three syllables, with the accent on the first, and with but one consonant after the first syllable, have that syllable pronounced short, let the Greek or Latin quantity be what it will. Thus *regulus* and *remora*, *mimicus* and *minium*, are heard with the first vowel short in English pronunciation, though the first word of each pair has its first syllable long in Latin; and the *u*, in *fumigo* and *fugito*, is pronounced long in both words, though in Latin the last *u* is short. This rule is never broken but when the first syllable is followed by *e* or *i*, followed by another vowel: in this case, the vowel in the first syllable is long, except that vowel be *i*. Thus *lamia*, *genius*, *Libya*, *docco*, *cupio*, have the accent on the first syllable, and this syllable is pronounced long in every word but *Libya*, though in the original it is equally short in all.

20. It must have frequently occurred to those who instruct youth, that, though the quantity of the accented syllable of long proper names has been easily conveyed, yet that the quantity of the preceding unaccented syllables has occasioned some embarrassment. An appeal to the laws of our own language would soon have removed the perplexity, and enabled us to pronounce the initial unaccented syllables with as much decision as the others. Thus every accented antepenultimate vowel but *u*, even when followed by one consonant only, is, in our pronunciation of Latin, as well as in English, short. Thus *fabula*, *separo*, *diligo*, *nobilis*, *cucumis*, have the first vowels pronounced as in the English words *capital*, *celebrate*, *simony*, *solitude*, *luculent*, in direct opposition to the Latin quantity, which makes every antepenultimate vowel, in all these words but the last, long; and this *we* pronounce long, though short in Latin. But, if a semi-consonant diphthong succeed, then every such vowel is long but *i* in our pronunciation of both languages; and *Euganeus*, *Eugenia*, *filius*, *folium*, *dubia*, have the vowel in the antepenultimate syllable pronounced exactly as in the English words *satiare*, *menial*, *delirious*, *notorious*, *penurious*; though they are all short in Latin but the *i*, which we pronounce short, though in the Latin it is long.

21. The same rule of quantity takes place in those syllables which have the secondary accent; for, as we pronounce *lamentation*, *demonstration*, *diminution*, *domination*, *incubration*, with every vowel in the first syllable short but *u*, so we pronounce the same vowels

of double emphasis was placed upon the long vowels, which the English pronunciation does not recognize. We make no difference, for instance, in the sound of the verb *moror*, whether it signifies to *delay*, or to be *foolish*. In the first signification it is *short*, in the latter *long*; and that the Romans marked this difference in their pronunciation, is evident from the sarcasm of Nero, pointed against his predecessor Claudius, Suet. Ner. 33: *Moror cum inter homines desisise, productis syllabâ primâ*. The anomaly would be removed by regularly pronouncing the long vowels as in the English words *tame*, *scene*, *bone*, *tune*, and the short ones as in *can*, *sent*, *win*, *bond*, *tun*, added to the single sound of the consonant already described. The application of this rule to the examples produced in the following sections, if the quantity of the syllables be duly attended to, will sufficiently prove the advantages arising from this method of pronunciation.—TROLOPE.]

in the same manner in *lamentatio, demonstratio, diminutio, dominatio, and lucubratio*; but, if a semi-consonant diphthong succeed the secondary accent, as in *Ariovistus, Heliodorus, Gabinianus, Herodianus, and Volusianus*, every vowel preceding the diphthong is long but *i*, just as we should pronounce these vowels long in the English words *amiability, mediatorial, propitiation, excoriation, centuriator, &c.*

22. But, to reduce these rules into a smaller compass, that they may be more easily comprehended and remembered, it may be observed, that, as we always shorten every antepenultimate vowel with the *primary* accent but *u*, unless followed by a semi-consonant diphthong, though this antepenultimate vowel is often long in Greek and Latin, as *Æschylus, Æschines, &c.*, and the antepenultimate *i*, even though it be followed by such a diphthong, as *Eleusinia, Ocria, &c.*, so we shorten the first syllable of *Æsculapius, Enobarbus,* &c.*, because the first syllable of both these words has the *secondary* accent; but we pronounce the same vowels long in *Æthiopia, Ægialeus, Haliartus, &c.*, because this accent is followed by a semi-consonant diphthong.

23. This rule sometimes holds good, where a mute and liquid intervene, and determines the first syllable of *Adrian, Adriatic, &c.*, to be long, like *day*, and not short, like *add*; and it is on this analogical division of the words, so little understood or attended to, that a perfect and a consistent pronunciation of them depends. It is this analogy that determines the first *u* to be long in *stupidus*, and the *y* short in *clypea*, though both are short in the Latin, and the *o*, in the first syllable of *Coriolanus*, which is short in Latin, to be long in English.

24. The necessity of attending to the quantity of the vowel in the accented syllable has sometimes produced a division of words in the following vocabulary that does not seem to convey the actual pronunciation.† Thus the words *Sulpitius, Anicium, Artemisium, &c.*, being divided into *Sul-pi'ti-us, A-nic'i-um, Ar-te-mis'i-um, &c.*, we fancy the syllable after the accent deprived of a consonant closely united with it in sound, and which, from such a union, derives an aspirated sound equivalent to *sh*. But, as the sound of *t, c, or s*, in this situation, is so generally understood, it was thought more eligible to divide the words in this manner, than into *Sul-pi'ti-us, A-ni'ci-um, Ar-te-mi'si-um*, as, in the latter mode, the *i* wants its shortening consonant, and might, by some speakers, be pronounced, as it generally is in Scotland, like *ee*. The same may be observed of *c* and *g*, when they end a syllable, and are followed by *e* or *i*, as in *Ac-e-ra'tus, Ac-i-da'li-a, Tig-el-l'nus, Teg'y-ra, &c.*, where, the *c* and *g* ending a syllable, we, at first sight, think them to have their hard sound; but, by observing the succeeding vowel, we soon perceive them to be soft, and only made to end a syllable in order to determine the shortness of the vowel which precedes.

25. The general rule, therefore, of quantity indicated by the syllabication adopted in the Vocabulary is, that, when a consonant ends a syllable, the vowel is always short, whether the accent be on it or not; and that, when a vowel ends a syllable with the accent on it, it

is always long; ‡ that the vowel *u*, when it ends a syllable, is long, whether the accent be on it or not; and that the vowel *i*, (3) (4) when it ends a syllable without the accent, is pronounced like *e*; but, if the syllable be final, it has its long, open sound, as if the accent were on it; and the same may be observed of the letter *y*.

Rules for Placing the Accent of Greek and Latin Proper Names.

26. Words of two syllables, either Greek or Latin, whatever be the quantity in the original, have, in English pronunciation, the accent on the first syllable; and, if a single consonant come between two vowels, the consonant goes to the last syllable, and the vowel in the first is long; as, *Cato, Ceres, Comus, &c.*§

27. Polysyllables, adopted whole, from the Greek or Latin, into English, have generally the accent of the Latin; that is, if the penultimate be long, the accent is on it; as, *Severus, Democedes, &c.*; if short, the accent is on the antepenultimate; as, *Demosthenes, Aristophanes, Posthumus, &c.*—See INTRODUCTION.

28. When Greek or Latin proper names are Anglicized, either by an alteration of the letters, or by cutting off the latter syllables, the accent of the original, as in appellatives under the same predicament, is transferred nearer to the beginning of the word. Thus *Proserpina* has the accent on the second syllable; but, when altered to *Proserpine*, it transfers the accent to the first. The same may be observed of *Homerus, Virgilius, Horatius, &c.*, when Anglicized to *Homer, Virgil, Horace, &c.*

29. As it is not very easy, therefore, so it is not necessary, to decide where doctors disagree. When reasons lie deep in Greek and Latin etymology, the current pronunciation will be followed, let the learned do all they can to hinder it. Thus, after *Hyperion* has been accented by our best poets according to our own analogy, with the accent on the antepenultimate, as Shakspeare:—

“*Hyperion's* curls, the front of Jove himself.”—*Hamlet*.

“————— that was to this
Hyperion to a satyr.”—*Ibid*.

“————— next day after dawn,
Doth rise and help *Hyperion* to his horse.”—*Henry Vth*.

So Cooke, in his translation of *Hesiod's Theogony*, follows the accentuation of Shakspeare:—

“*Hyperion* and *Japhet*, brothers, join:
Thea and *Rhea* of this ancient line
Descend; and *Themis* boasts the source divine.”}

“The fruits of *Thia* and *Hyperion* rise,
And with refulgent lustre light the skies.”

After this established pronunciation, I say, how hopeless, as well as useless, would it be to attempt the penultimate accentuation! which yet ought undoubtedly to be preserved in reading or speaking Greek or Latin compositions, but, in reading or speaking English, must be left to those who would rather appear learned than judicious.¶ But *Acron, Arion, Amphion,*

* [It is more correct to pronounce these diphthongs long universally, which may be done without any violence to the ear of an Englishman.—TROLLOPE. See note, p. 849.—EDITOR.]

† [This is not the case, if the correct method of pronunciation is adopted.—TROLLOPE.]

‡ [Not according to the above method.—TROLLOPE.]

§ [There is no doubt, as before observed, that the Lat-

ins made a difference in this respect. In dissyllables, the analogy of the English language will admit of this less readily than in polysyllables; but still an accelerated pronunciation may be employed to mark the distinction.—TROLLOPE.]

¶ [Shakspeare's deviation from classical authority, in one word, does not invalidate the general propriety of classical pronunciation. The penultima of *Hyperion* (*Υπερίων*)

Echion, Orion, Ixion, Pandion, Asion, Alphon, Eri- on, Ophon, Methion, Axion, Eion, Thlexion, and Sandion, preserve their penultimate accent invariably; while *Ethalion*, a word of the same form and origin, is pronounced with the accent on the antepenultimate, like *Deucalion* and *Pygmalion*; and this, if I mistake not, is the common pronunciation of a ship in the British navy, so called from the name of the Argonaut, who accompanied Jason in his expedition to Colchis, to fetch the golden fleece.

30. The same difficulty of deciding between common usage and classical propriety appears in words ending in *ia*, as *Alexandria, Antiochia, Seleucia, Samaria, Iphigenia*,* and several others, which were pronounced, by our ancestors, as appears from their poetry, according to our own analogy, with the accent on the antepenultimate syllable; and there is no doubt but every word of this form would have fallen into the same accentuation, if classical criticism had not stepped in and prevented it. A philosophical grammarian would be apt to think we are not much obliged to scholars for this interruption of the vernacular current of pronunciation; but, as there is so plausible a plea as that of reducing words to their original languages, and as a knowledge of these languages will always be an honorable distinction among men, it is strongly to be suspected that these words will not long continue in their plain, homespun, English dress. This critical correction, however, seems to have come too late for some words, which, as Pope expresses it, have "slid into verse," and taken possession of our ears; and therefore, perhaps, the best way of disposing of them will be to consider them as the ancients did the quantity of certain doubtful syllables, and to pronounce them either way. Some, however, seem always to have preserved the accent of their original language, as *Thalia* and *Sophia*; but *Iphigenia, Antiochia, Seleucia, and Samaria*, have generally yielded to the English antepenultimate accent; and *Erythia, Deidamia, Laodamia, Hypodamia, Apamia, Ilihyia, and Orihyia*, from their seldom appearing in mere English composition, have not often been drawn aside into plain English pronunciation. The same may be observed of words ending in *nicus*, or *nice*: if they are compounded of the Greek $\nu\kappa\eta$, the penultimate syllable is always long, and must have the accent; as, *Stratonicus, Berenice*, &c.; if this termination be what is called a *gentile*, signifying a man by his country, the penultimate is short, and the accent is on the antepenultimate; as, *Macedonicus, Sardonicus, Britannicus*, &c. — See ANDRONICUS.

31. Thus we see many of these proper names are of dubious accentuation; and the authorities which may be produced on both sides sufficiently show us the inutility of criticizing beyond a certain point. It is in these as in many English words; there are some which, if mispronounced, immediately show a want of education; and there are others which, though not pronounced in the most erudite manner, stamp no imputation of ignorance or *illiteracy*. To have a general knowledge, therefore, of the pronunciation of these words, seems absolutely necessary for those who would appear respectable in the more respectable part of society. Perhaps no people on earth are so correct in the accentuation of proper names as the learned among the English. The Port-Royal Grammar informs us that, "notwithstanding all the rules that can be given, we are often under the necessity of submitting to custom, and of accommodating our pronunciation to what is received among the learned, according to the country we are in." "So we pronounce," says the grammarian, "*Aristobulus, Basilus, Ido'lium*, with the accent on the antepenultimate, though the penultimate is long, because it is the custom; and, on the contrary, we pronounce *Andre'as, ide'a, Mari'a, &c.*, with the accent on the penultimate, though it is short, because it is the custom of the most learned. The Italians," continues he, "place the accent on the penultimate of *antonomasi'a, harmoni'a, philosophi'a, theologi'a*, and similar words, according to the Greek accent, because, as Ricciolius observes, it is the custom of their country. Alvarez and Greter think we ought always to pronounce them in this manner, though the custom, not only of Germany and Spain, but of all France, is against it; but Nebrissensis authorizes this last pronunciation, and says that it is better to place the accent of these vowels on the antepenultimate syllable; which shows," concludes the grammarian, "that, when we once depart from the ancient rules, we have but little certainty in practice, which is so different in different countries."

But, however uncertain and desultory the accentuation of many words may be, it is a great satisfaction to a speaker to know that they are so. There is a wide difference between pronouncing words of this kind ignorantly and knowingly. A person who knows that scholars themselves differ in the pronunciation of these words can always pronounce with security; but one who is unacquainted with the state of the accent is not sure that he is right when he really is so, and always pronounces at his peril.

* * It is hoped the candid peruser of this work will make allowances for an occasional error in dividing a syllable or placing an accent, when he reflects on the difficulty with which such a work must necessarily be attended. The author flatters himself, however, that such attention has been paid both to the compilation and the proofs, that the fewest errors imaginable have escaped him. [A considerable number of such errors of inadvertence have been corrected in this edition. — EDITOR.]

is long in Hom. II. T. 398, and Shakspeare evidently sacrificed quantity to the harmony of his versification. The sanction of an English poet will scarcely justify the translator of Hesiod in following his irregularities. The word *Ethalion* is not in point. — TROLLOPE.]

* [These words were written, in Greek, with the diphthong *ei*; but, in Latin, the penultima may be considered common, as that in *Academia*, which is spelt with *ei* in Greek, but made short by Juvenal. In English, therefore, it would be the worst of affectation to accent them otherwise than long-established usage warrants. A characteris-

tic anecdote is related of the late eccentric *Dr. Parr*, in reference to the modern pronunciation of them. Being one day consulted, by an amiable professor, as to the propriety of accenting the penultima of the word *Alexandria*, he surprised him with the following satisfactory admonition: "I must call it *Alexandri'a*; but I would advise you to call it *Alexan'dria*." — TROLLOPE.]

† [Our author properly accents *Aristob'ulus*; but the error of the grammarian does not affect the argument. — TROLLOPE.]

RULES

REFERRED TO IN THIS EDITION BY THE FIGURES IN THE COLUMNS OF
THE FOLLOWING VOCABULARY.

☞ The sounds of the vowels, as long, short, &c., were not marked by Walker in his Key; but the same system of notation that is used in the preceding Dictionary has been applied to this edition of the Key, by the Editor; and thus any special reference, by numbers, to the preceding Rules of Walker is rendered unnecessary.

The following Rules have been taken substantially from Walker; No. 1, from the 10th and 11th of the preceding Rules; No. 2, from the 11th; No. 3, from Walker's notes, in the Terminational Vocabulary, relating to the terminations *ia*, *eia*, and *eius*, (see pages 894 and 904); No. 4, from the 5th Rule; and No. 5, from the 12th, 13th, 14th, 15th, and 16th Rules.

RULE 1. — The consonants *c*, *s*, *t*, and *x*, before *ia*, *ie*, *ii*, *io*, *iu*, *eu*, and *yo*, preceded by the accent, in Latin and Greek words, as in English, commonly take the sound of *sh*, as in the following words: *Por'ti-a*, (pör'she-a,) *A-lex'i-a*, (a-lëk'she-a,) *Cly'ti-e*, (klīsh'e-ë,) *Hel-ve'ti-i*, (hel-vë'she-i,) *Pho'ci-on*, (fö'she-ön,) *Ac'ci-us*, (äk'she-üs,) *Ca-du'ce-us*, (ka-dü'she-üs,) *Sī'cy-on*, (sīsh'e-ön.) — When *s*, preceded by the accent, is followed by *ia*, or *io*, it takes the sound of *zh*; as, *Mæ'si-a*, (më'zhe-a,) *He'si-od*, (hë'zhe-od.) — According to Walker, the words *Asia*, *Sosia*, and *Theodosia*, are the only exceptions.

RULE 2. — In some proper names, *t* preserves its true sound; as, *Ætion*, *Amphictyon*, *Androtion*, *Eurytion*, *Gratton*, *Harpocraton*, *Hippotion*, *Iphition*, *Metion*, *Ornytion*, *Pallantion*, *Philistion*, *Polytion*, *Sotion*, *Stration*, and a few others; but *Hephæstion* and *Theodotion* are Anglicized, the last syllables being pronounced like the last syllables in *question* and *commotion*. In the words *Æsion*, *Dionysion*, and *Iasion*, the *s* takes the sound of *z*, but not of *zh*.

RULE 3. — In words ending in *eia*, *eii*, *eium*, and *eius*, with the accent on the *e*, the *i* following the accent is to be understood as articulating the following vowel, like *y* consonant; as, *Eleg'e'ia*, (el-e-jë'ya,) *Pompe'ii*, (pom-pë'yī,) *Pompe'ium*, (pom-pë'yum,) *Pompe'ius*, (pom-pë'yus.) The same rule also applies to words ending in *ia*, preceded by *a* or *o* having the accent upon it, as *Acha'ia*, (a-kä'ya,) *Lato'ia*, (la-tö'ya,) and likewise to words having the accent on a vowel, followed by *ia*, though they may not end the word, as *Ple'iades*, (plë'ya-dëz.)

Note. — In the different editions of Walker's Key, there is an inconsistency with regard to the class of words ending in *eia*, *eii*, *eium*, and *eius*. In some of them, the accent is placed on the *e*, as in *Apule'ius*; while others have it placed on the *i*, as *Pompe'ius*; and, in some cases, the same word is differently accented in the Initial and Terminational Vocabularies; but, in his notes on the terminations *ΕΙΑ* and *ΕΙΥΣ*, in the Terminational Vocabulary, Walker decides in favor of placing the accent on the *e*, including the whole list "under the same general rule, that of sounding the *e* separately, and the *i* like *y* consonant." In this Vocabulary, all the words of this class have the accent placed upon the *e*.

RULE 4. — The diphthongs *æ* and *æ*, ending a syllable with the accent on it, are pronounced like long *e*, as in *Cæ'sar*, (së'zar;) but, when followed by a consonant in the same syllable, like short *e*, as in *Dæd'alus*, (dëd'a-lüs.)

RULE 5. — In Greek and Latin words, which begin with uncombinable consonants, the first letter is silent: thus *C* in *Cneus* and *Ctesiphon*, *M* in *Mneus*, *P* in *Psyche* and *Ptolemy*, *Ph* in *Phthia*, and *T* in *Tmolus*, are not sounded.

PRONUNCIATION

OF

GREEK AND LATIN PROPER NAMES.

INITIAL VOCABULARY.

The words to which the letter (C) is annexed have been taken from Mr. Carr's "Classical Pronunciation of Proper Names."

The words to which the letter (T) is annexed are words which were added by Mr. Trollope, in his edition of Walker's Key.

The words to which the letter (S) is annexed have been derived from Scheller's Latin and German Lexicon.

The words which have not one of the above letters annexed to them are to be found in Walker's Key.

When a word is repeated, for the purpose of showing a deviation from Walker's pronunciation by Carr,

the letter (C) is annexed to the word as pronounced by Carr; as, for example, the word *Abasa* is pronounced *A-ba'sa* by Walker, and *Ab'a-sa* by Carr.

The figures annexed to the words refer to the *Five Rules of Pronunciation*, on page 354. Thus the figure (1) annexed to *Abantias* refers to Rule 1, which shows that the word is pronounced *A-bän'she-zs*.

The Rules referred to in the notes at the bottom of the pages, are Walker's *Rules for Pronouncing the Vowels of Greek and Latin Proper Names*, found on pages 849—853.

The words in *Italics* are the preceding words *Anglicized*. Thus the Latin word *Adrianus* is changed, in English, into *Adrian*.

* *Äba*. — Every *a*, ending a syllable, with the accent upon it, is pronounced like the *a* in the English words *favor*, *ta-per*, &c. See Rule 1, prefixed to this Vocabulary.

† *Äbana*. — Every unaccented *a*, whether initial, medial, or final, ending a syllable, has an obscure sound, bordering on the *a* in *father*. See Rule 7, prefixed to this Vocabulary. [In this Key, as prepared by Walker, the vowels had no

marks of long, short, &c.; but in this edition, they are marked so as to indicate their sound in accordance with Walker's Rules. — EDITOR.]

‡ *Ächabytos*. — *Ch*, in this and all the subsequent words, have the sound of *k*. Thus *Achabytos*, *Achæa*, *Achates*, &c., are pronounced as if written *Ächabytos*, *Äkæa*, *Äkates*, &c. See Rule 12.

* Amphigenia. — See IPHIGENIA, and Rule 30, prefixed to this Vocabulary.

† Anadyomene. — This epithet, from the Greek ἀναδύομαι, emergens, signifying rising out of the water, is applied to the picture of Venus rising out of the sea, as originally painted by Apelles. I doubt not that some, who only hear this word without seeing it written, suppose it to mean Anno Domini, the year of our Lord.

‡ Andronicus. — This word is uniformly pronounced, by our prosodists, with the penultimate accent; and yet, so averse is an English ear to placing the accent on the penultimate i, that, by all English scholars, we hear it placed upon the antepenultimate syllable. That this was the pronunciation of this word in Queen Elizabeth's time, appears plainly from the tragedy of Titus Andronicus, said to be written by

Shakspeare; in which we every where find the antepenultimate pronunciation adopted. It may, indeed, be questioned whether Shakspeare's learning extended to a knowledge of the quantity of this Græco-Latin word; but, as Mr. Steevens has justly observed, there is a greater number of classical allusions in this play than are scattered over all the rest of the performances on which the seal of Shakspeare is indubitably fixed; and therefore it may be presumed that the author could not be ignorant of the Greek and Latin pronunciation of this word, but followed the received English pronunciation of his time; and which, by all but professed scholars, is still continued. — See SOPHONICUS. — The analogy of the language, with which Shakspeare's authority can have nothing to do, is decisive in favor of the penultimate accentuation. — TROLLOPE.

* *Antiochia*. — For words of this termination, see *IPHONIA*, and No. 30 of the Rules prefixed to this Vocabulary.
 † *Apotheosis*. — When we are reading Latin or Greek, this word ought to have the accent on the penultimate syllable; but, in pronouncing English, we should accent the antepenultimate.

“Allots the prince of his celestial line
 An *apothēsis* and rites divine.” — GARTH.

[The Greek word is *ἀποθέωσις*. If the true pronunciation were retained, the word would necessarily be excluded from English poetry. But this is no reason that an almost solitary instance of poetic license should be a rule in reading prose. — TROLLOPE.] — [See *APOTHEOSIS*, in the Dictionary. — EDITOR.]

† *Arabæcs*. — Lempriere, Gouldman, Gesner, and Littleton, accent this word on the first syllable, but Ainsworth and Holyoke on the second; and this is so much more agreeable to an English ear, that I should prefer it. [See *ARABÆCS*. — TROLLOPE.]

§ *Arbela*, the city of Assyria where the decisive battle

was fought between Alexander and Darius, and the city in Palestine of that name, have the accent on the penultimate; but *Arbela*, a town in Sicily, has the accent on the antepenultimate syllable.

|| *Archilamus*. — Ainsworth, Gouldman, Littleton, and Holyoke, place the accent on the antepenultimate syllable of this word; but Lempriere and Labbe [also Carr] on the penultimate. I have followed Lempriere and Labbe, though, in my opinion, wrong; for, as every word of this termination has the antepenultimate accent, as *Polydamas*, *Theodamas*, &c., I know not why this should be different; though Labbe tells us that the learned are of his opinion.

¶ *Areopagus*. — Labbe tells us that the penultimate syllable of this word is, beyond all controversy, short, — *quidquid nonnulli in tanta luce etiam non secutantur*. Some of these blind men are Gouldman, Holyoke, and Littleton; but Lempriere and Ainsworth, [also Carr], the best authorities, agree with Labbe. [There is no authority for the word in full; but, from the quantity of the word *νάγος*, Labbe is unquestionably correct. — TROLLOPE.]

* *Argives*. — I have observed a strong propensity in school-boys to pronounce the *g* in these words hard, as in the English word *give*. This is, undoubtedly, because their masters do so; and they will tell us that the Greek *gamma* should always be pronounced hard in the words from that language. What, then, must we alter that long catalogue of words where this letter occurs, as in *Genesis, genius, Diogenes, Ægyptus, &c.*? The question answers itself. [Our good author has a mighty antipathy to any approach towards the classical pronunciation in Anglicized proper names. Perhaps the reasons already given for a different prejudice may be thought satisfactory. — TROLLOPE.]

termined the accent of this word on the second syllable. [The quantity of the word is sufficiently marked by its derivatives. Martial. Epigr. — *Scis quid in Arscacia, &c.* Lucan. Phar. viii. 409 — *Nascitur Arscadies*. Hence, perhaps, by analogy, we may obtain the true pronunciation of *Arbaces*; q. v. — TROLLOPE.]

† *Artemis*. — “The sisters to Apollo tune their voice,
And *Artemis* to thee, whom darts rejoice.”
COOKE’S *Hesiod*. Theog. v. 17.

‡ *Artenita*. — *Artemis* places the accent on the antepenultimate syllable of this word; but Lempriere, Gouldman, and Holyoke, [also Carr.] more correctly, in my opinion, on the penultimate.

* *Atrebatæ*. — Ainsworth accents this word on the antepenultimate syllable; but Lempriere, Gouldman, Holyoke, and Labbe, [also Carr,] on the penultimate; and this is, in my opinion, the better pronunciation. [There is a line in

the Christian poet *Sidonius Apollinaris*, who flourished A. D. 432, which favors the accentuation of Ainsworth — *Atrebatum terras*, &c. — TROLLOPE.]

* *Bellerus*. — All our lexicographers unite in giving this word the antepenultimate accent; but Milton seems to have sanctioned the penultimate, as much more agreeable to English ears, in his *Lycidas*: —
 “Or whether thou, to our moist vows denied,
 Sleep’st by the fable of *Bellerus* old.”

Though it must be acknowledged that Milton has, in this word, deserted the classical pronunciation, yet his authority is sufficient to make us acquiesce in his accentuation in

the above-mentioned passage. [True; but not elsewhere. — TROLLOPE.]

† *Bianor*. — Lempriere accents this word on the first syllable, but Labbe, Ainsworth, Gouldman, and Holyoke, on the second; and these agree with Virgil, *Ecl.* ix. v. 60.

‡ *Britones*. — Labbe tells us that this word is sometimes pronounced with the penultimate accent, but more frequently with the antepenultimate. [*Qua nec terribiles Cimbrī, nec Britones unquam*, &c. *Juv. Sat.* xv. 124. — TROLLOPE.]

* Candace. — Lempiere, Labbe, and Ainsworth, [also Carr,] accent this word on the first syllable, but Gouldman and Holyoke on the second; and I am much mistaken if the

general ear has not sanctioned this latter pronunciation and given it the preference.

* *Cleomenes*. — There is an unaccountable caprice in Dryden's accentuation of this word, in opposition to all prosody; for, through the whole tragedy of this title, he places the accent on the penultimate, instead of the antepenultimate, syllable. [This observation is perfectly just. But is there not something equally capricious in our author's note on the word *Andronicus*, compared with this charge against Dryden? — TROLLOPE.]

† *Cleopatras*. — The learned editor of Labbe tells us this word ought to be pronounced with the accent on the antepenultimate, *Cle-op'a-tra*, though the penultimate accentuation, he says, is the more common. [I know of no authori-

ty for the penultimate accentuation. — TROLLOPE. — The poets make it long by position. — CARR.]

‡ *Nacaeidum*. — C before n, in this and the succeeding words, is mute; and they must be pronounced as if written *Nacaeidum, Nacalis*, &c. [See note on Rule 13. — TROLLOPE.]

§ *Collina*. — Lempriere accents this word on the antepenultimate; but Ainsworth, Gouldman, and Holyoke, more properly on the penultimate.

|| *Colates*. — Ainsworth and Lempriere accent this word on the antepenultimate syllable; but Labbe, Gouldman, and Holyoke, more agreeably to the general ear, on the penultimate.

* Delphi. — This word was, formerly, universally written Delphos, till Mr. Cumberland, a gentleman no less remarkable for his classical erudition than his dramatic abilities, in his *Widow of Delphi*, rescued it from the vulgarity in which it had been so long involved.

† Diomedes. — All words ending in *edes* have the same accentuation; as, *Archimedes, Diomedes, &c.* The same may

be observed of words ending in *icles* and *acles* as, *Iphicles, Damocles, Androcles, &c.* — See the Terminational Vocabulary.

‡ Dioscorus. — An heresiarch of the fifth century.
§ Dioscuri. — The name given to Castor and Pollux, from the Greek Διός and κέρος, pro κέρος, "the sons of Jove."

* *Eridanus*. —

"Alpheus and *Eridanus* the strong,
That rises deep, and stately rolls along."

COOKE'S *Hesiod. Theog.* v. 520.

† *Erythea*. —

"Chrysaor, Love the guide, Callirhōe led,
Daughter of Ocean, to the genial bed,
Whence Geryon sprung, fierce with his triple head;
Whom Hercules laid breathless on the ground
In *Erythea*, which the waves surround."

COOKE'S *Hesiod. Theog.* v. 523.

[The Greek is Ἐρυθεία. — TROLLOPE.]

† *Eumenes*. — It is not a little surprising that so elegant a

writer as Hughes should, throughout the whole tragedy of the *Siege of Damascus*, accent this word on the penultimate syllable; especially as there is not a single proper name, of more than two syllables, in the Greek or Latin languages, of this termination, which has the penultimate syllable long. Lee has done the same in the tragedy of *Alexander*, which would lead us to suppose there is something naturally repugnant to an English ear in the antepenultimate accentuation of these words, and something agreeable in the penultimate.

§ *Euthalia*. — Labbe observes that this word does not come from the muse *Thalia*, as some suppose, but from the masculine *Euthalios*; as *Eulatia*, *Eumenia*, *Eustolia*, *Eutropia*, *Emmelia*, &c., which are professedly accented on the antepenultimate. See Rule 30.

* *Granicus*. — As Alexander's passing the River *Granicus* is a common subject of history, poetry, and painting, it is not wonderful that the common ear should have given in to a pronunciation of this word more agreeable to English analogy than the true classical accent on the penultimate syllable. The accent on the first syllable is now so fixed as to make the other pronunciation savor of pedantry. — See *ANRONICUS*. — [That is, if correct speaking be pedantry. — THOLOPE.]

† *Hegemon*. — Gouldman and Holyoke accent this word on the antepenultimate syllable, but Labbe and Lempriere, [also Carr,] more classically, on the penultimate.

‡ *Heliogabulus*. — This word is accented on the penultimate syllable by Labbe and Lempriere; but, in my opinion, more agreeably to the general ear by Ainsworth, Gouldman, and Holyoke, on the antepenultimate.

§ *Heraclitus*. — This name of the weeping philosopher is so frequently contrasted with that of *Democritus*, the laughing philosopher, that we are apt to pronounce both with the same accent; but all our prosodists are uniform in giving the antepenultimate accent to the latter, and the penultimate to the former word.

* Hippocrene. — Nothing can be better established than the pronunciation of this word in four syllables, according to its original; and yet, such is the license of English poets, that they do not infrequently contract it to three. Thus *Coocke, Hesiod. Theog. v. 9* : —

“And now to Hippocrene resort the fair,
Or, Olynus, to thy sacred springs repair.”

And a late translator of the Satires of Persius : —

“Never did I so much as sip,
Or wet with Hippocrene a lip.”

This contraction is inexcusable, as it tends to embarrass pronunciation and lower the language of poetry.

† *Hybreas*. — Lempiere accents this word on the penulti-

mate syllable, but Labbe, Gouldman, and Holyoke, more properly, on the antepenultimate.

‡ *Hyperion*. — See Rule 29.

§ *Iapetus*. —

“Son of Iapetus, o'er-subtle, go,
And glory in thy artful theft below.”

Coocke's Hesiod.

Greek *idēa*, in opposition to the Latin, which we generally follow in other cases, and which, in this word, has the penultimate short, in Ainsworth, Labbe, and our best prosodists; and, according to this analogy, *idea* ought to have the accent on the first syllable, and that syllable short, as the first of *idiōt*. But, when this word is a proper name, as the daughter of Dardanus, I should suppose it ought to fall into the general analogy of pronouncing Greek names, not by accent, but by quantity; and therefore that it ought to have the accent on the first syllable; and, according to our own analogy, that syllable ought to be short, unless the penultimate in the Greek is a diphthong, and then, according to general usage, it ought to have the accent. — [The fact is, that the Greek, in this case, is a diphthong, the name being *Idāia*, and therefore, in Latin and English, *Idēa*. In the beginning of the note, there is some confusion in our author's statements. The penultimate in *idēa* is short; in the Latin *idea*, long. Aurel. Vic.: *Animos idea fatigat.* — TROLLP.

* *Idomeneus*. — The termination of nouns in *eus* was, among the ancients, sometimes pronounced in two syllables, and sometimes as a diphthong, in one. Thus Labbe tells us that *Achilleus*, *Argyllēus*, *Phalarēus*, *Aspirtēus*, are pronounced commonly in four syllables, and *Nereus*, *Orpheus*, *Porteus*, *Tereus*, in three, with the penultimate syllable short in all; but that these words, when in verse, have generally the diphthong preserved in one syllable:

“Eumenidum veluti demens videt agmina Pentheus.”

VIRG.

He observes, however, that the Latin poets very frequently dissolved the diphthong into two syllables:

“Naladum castu, tantum non Orpheus, Hebrum
Pœnaque respectus, et nunc manet Orpheus in te.”

The best rule, therefore, that can be given to an English reader, is, to pronounce words of this termination always with the vowels separated, except an English poet, in imitation of the Greeks, should preserve the diphthong; but, in the present word, I should prefer *I-dōm'e-neus* to *I-dōm-e-nēus*, whether in verse or prose. — [The reverse of this is decidedly the best rule; viz., to preserve the diphthong invariably, except when an English poet, after the example of the Latin, dissolves it. *I-dōm-e-nēus* must be incorrect, as the Greek name is always spelt with an *ε*; so that the resolved diphthong would be pronounced *Idō-mēn'e-us*. — TROLLP.] — [The following remarks are quoted from Mr. Carr: “It must be observed, that the termination *eus*, in proper names, derived from the third declension of Greek contracts in *eus*, as *Orpheus*, *Pentheus*, *Theseus*, (*Ὀρφεύς*, *Πενθεύς*, *Θησεύς*) are generally pronounced as one syllable in poetry; as,

‘Eumenidum veluti demens videt agmina Pentheus.’

VIRG.

‘Hæc Proteus, et se jactu dedit æquor in altum.’

VIRG.

But, out of poetry, the termination *eus* must be dissolved according to the analogy of the Latin language, (as *Dēus*, from *Zeús*), when the penultimate *e*, representing the Greek *ε* in the original, will, of course, be short; as, *Orpheus*, *Theseus*, &c. But, if they are converted into adjectives, the penultimate becomes long; as, *Pentheus*, (*adj.* of *Penthesus*); *Nereus*, (*adj.* of *Nereus*); *Orpheus*, (*adj.* of *Orpheus*); thus representing the quantity of the original Greek adjectives, *Πενθεύς*, *Νησεύς*, *Ὀρφεύς*. — EDITOR.]

† *Ilioneus*. — See *IDOMEENEUS*.

‡ *Imaus*. — All our prosodists make the penultimate syllable of this word short, and consequently accent it on the

antepenultimate; but Milton, by a license he was allowed to take, accents it on the penultimate syllable:

“As when a vulture on *Imaus* bred,
Whose snowy ridge the roving Tartar bounds.”

§ *Iphigenia*. — The antepenultimate syllable of this word had been in quiet possession of the accent for more than a century, till some Greeklings, of late, have attempted to place the stress on the penultimate, in compliment to the original *Ἰφιγένεια*. If we ask our innovators on what principles they pronounce this word with the accent on the *i*, they answer, because the *i* stands for the diphthong *ei*, which, being long, must necessarily have the accent on it. But it may be replied, this was, indeed, the case in the Latin language, but not in the Greek, where we find a thousand long penultimates without the accent. It is true, one of the vowels which composed a diphthong in Greek, when this diphthong was in the penultimate syllable, generally had an accent on it; but not invariably; for a long penultimate syllable did not always attract the accent in Greek, as it did in Latin. An instance of this, among thousands, is that famous line of dactyls in Homer's *Odyssey*, expressing the tumbling down of the stone of Sisyphus:

Αἰτῖς ἐπειτα πέδονδε κλονίδεστο λάας ἀναϊδῶς.
Odys. b. 11.

Another striking instance of the same accentuation appears in the first two verses of the *Iliad*:

Μῆνην ἄειδε θεὰ Πηληϊάδεω, Ἀχιλλῆος
Οὐλομένην, ἣ μυρ' Ἀχαιοῖς ἄλαε ἔθηκε

I know it may be said that the written accents we see on Greek words are of no kind of authority, and that we ought always to give accent to penultimate long quantity, as the Latins did. Not here to enter into a dispute about the authority of the written accents, the nature of the acute, and its connection with quantity, which has divided the learned of Europe for so many years, — till we have a clearer idea of the nature of the human voice, and the properties of speaking sounds, which alone can clear the difficulty, — for the sake of uniformity, perhaps, it were better to adopt the prevailing mode of pronouncing Greek proper names like the Latin, by making the quantity of the penultimate syllable the regulator of the accent, though contrary to the genius of Greek accentuation, which made the ultimate syllable its regulator; and if this syllable was long, the accent could never rise higher than the penultimate. Perhaps, in language, as in laws, it is not of so much importance that the rules of either should be exactly right, as that they should be certainly and easily known: so the object of attention, in the present case, is not so much what ought to be done as what actually is done; and, as pedantry will always be more pardonable than *illiteracy*, if we are in doubt about the prevalence of custom, it will always be safer to lean to the side of Greek or Latin than of our own language. — [Enough has been said on the pronunciation of words of this class in Rule 30. — TROLLP.] — [See note on *Iphigenia*, in the *Terminational Vocabulary*, on page 893. — EDITOR.]

|| *Iphimedia*. — This and the foregoing word have the accent on the same syllable, but for what reason cannot be easily conceived. That *Iphigenia*, having the diphthong *ei* in its penultimate syllable, should have the accent on that syllable, though not the soundest, is at least a plausible reason, but why should our prosodists give the same accent to the *i* in *Iphimedia*, which, coming from *ἐμ*, and *μεδία*, has no such pretensions? If they say it has the accent in the Greek word, it may be answered, this is not esteemed a sufficient reason for placing the accent in *Iphigenia*; besides, it is giving up the sheet-anchor of modern prosodists,

the quantity, as the regulator of accent. We know it was an axiom in Greek prosody, that when the last syllable was long by nature, the accent could not rise beyond the penultimate; but we know, too, that this axiom is abandoned in Demosthenes, Aristoteles, and a thousand other words. The only reason, therefore, that remains for the penultimate accentuation of this word, is, that this syllable is long in some of the best poets. Be it so. Let those who have more learning and leisure than I have find it out. In the interim, as this may, perhaps, be a long one, I must recur to my advice under the last word; though Ainsworth has, in my opinion, very properly, left the penultimate syllable of both these words short, yet those who affect to be thought learned will

always find their account in departing as far as possible from the analogy of their own language in favor of Greek and Latin. [Carr gives as the Greek ἰσχυρότητα. — ΕΙΡΩΝ.]

* *Lasthenia*. — All the prosodists I have consulted, except Ainsworth, accent this word on the penultimate syllable; and, though English analogy would prefer the accent on the antepenultimate, we must necessarily yield to such a decided superiority of votes for the penultimate in a word so little Anglicized by use. — See ΓΡΗΘΕΜΙΑ.

† *Leonatus*. — In the accentuation of this word I have followed Labbe and Lempriere, the former of whom says, "Quamquam de hac voce amplius cogitandum cum eruditus viris existimem." Till, then, these learned men have considered this word, I think we may be allowed to consider it as formed from the Latin *leo* and *natus*, "lion-born;" and, as the *a* in *natus* is long, no shadow of reason can be given why it should not have the accent. This is the accentuation constantly given to it in the play of *Cymbeline*, and is, in my opinion, the best. — [Unquestionably; and therefore the accent has been so placed. — TROLOPE.]

‡ *Lucia*. — Labbe cries out loudly against those who accent this word on the penultimate, which, as a Latin word,

ought to have the accent on the antepenultimate syllable. "If once," says he, "we break through rules, why should we not pronounce *Amnia*, *Anastasia*, *Cecilia*, *Lucretia*, *Natalia*, &c., with the accent on the penultimate, likewise?" This ought to be a warning against our pronouncing the West-India island *St. Lucia*, as we sometimes hear it, *St. Luc'i'a*.

§ *Lupercal*. — This word is so little interwoven with our language, that it ought to have its true Latin accent on the penultimate syllable. But, wherever the antepenultimate accent is adopted in verse, as in Shakspeare's *Julius Cæsar*, where Antony says, —

"You all did see that on the *Lup'ercal*
I thrice presented him a kingly crown," —

we ought to preserve it. Mr. Barry, the actor, who was informed by some scholar of the Latin pronunciation of this word, adopted it in this place, and pronounced it *Lup'er'cal*, which gratified every ear that heard him.

* *Megara*. — I have, in this word, followed Labbe, Ainsworth, Gouldman, and Holyoke, by adopting the antepenultimate accent, [Carr does the same,] in opposition to Lempriere, who accents the penultimate syllable.

† *Megaricus*. — Labbe pronounces this word in four syllables, when a noun substantive; but Ainsworth marks it as a trisyllable, when a proper name, and, in my opinion, in-

correctly. — See *Idomeneus*. — [Ainsworth is right. See *Ovid. Met. x. 606.* — *Trollope*.]

‡ *Melobosis*. — In this word I have given the preference to the antepenultimate accent, with Labbe, Gouldman, and Holyoke, [also Carr,] though the penultimate, which Lempriere has adopted, is more agreeable to the ear. — [In both the second and third syllables, the *o* is the Greek *omicron*. — *Trollope*.]

* *Mulucha*.—This word is accented on the antepenultimate syllable by Labbe, Lempriere, and Ainsworth, and on the penultimate by Gouldman and Holyoke. Labbe, indeed, says, *ut volueris*; and I shall certainly avail myself of this permission to place the accent on the penultimate; for, when this syllable ends with *u*, the English have a strong propensity to place the accent on it, even in opposition to etymology, as in the word *Arbutus*.

† *Mycale* and *Mycone*, [*Mutina*].—An English ear seems to have a strong predilection for the antepenultimate accent on these words; but all our prosodists accent them on the antepenultimate. The same may be observed of *Mutina*. See note on *Oryus*.—[Ovid. Met. xii. 263: *Mater erat Mycale*, &c.—vii. 463: *Iline humile Myconum*, &c.—xv. 823: *Vieta petent Mutina*, &c.—TROLLOPE.]

‡ *Myrina*.—Labbe is the only prosodist I have met with who accents this word on the antepenultimate syllable; and, as this accentuation is so contrary to analogy, I have followed Lempriere, Ainsworth, Gouldman, and Holyoke, with the accent on the penultimate. See the word in the *Terminational Vocabulary*.—[This may be true of the epithet of Apollo, so called from the town Myrina, but not of the name of a gladiator mentioned in Mart. Epig. xii. 29: *Nuper cum Myrino peteretur*, &c.—TROLLOPE.]

§ [*Nasica*.—The penultimate is long.—EDITOR. "*Nasica* except templi non exitit auctor."—OVID.]

|| [*Nemea*; *Nemea*.—The penultimate is short.—EDITOR. "Et vastum *Nemea* sub rupe leonem."—VIRGIL.]

¶ *Nebule*.—Labbe, Ainsworth, Gouldman, Littleton, and Holyoke, [also Carr,] give this word the penultimate accent; and therefore I have preferred it to the antepenultimate accent given it by Lempriere, not only from the number of authorities in its favor, but from its being more agreeable to analogy.—[Compare Hor. Od. iii. 13, 5.—TROLLOPE.]

** *Nereis*.—The authorities are nearly equally balanced between the penultimate and antepenultimate accent; and therefore I may say, as Labbe sometimes does, *ut volueris*; but I am inclined rather to the antepenultimate accent, as more agreeable to analogy, though I think the penultimate more agreeable to the ear.

†† *Nereus*.—[See *IDOMENEUS*.—EDITOR. "Old *Nereus* to the Sea was born of Earth,—*Nereus*, who claims the precedence in birth To their descendants; him old god they call, Because sincere and affable to all."]

* *Nonaeris*. — Labbe, Ainsworth, Gouldman, and Holyoke give this word the antepenultimate accent; but Lempriere, Littleton, and the Graduses, place the accent, more agreeably to analogy, on the penultimate. — [The latter is correct. See Ovid. Met. viii. 426. Fast. v. 97 — TROLLOPE.]

† *Nomicus*. —
 “ ———— Our fleet Apollo sends
 Where Tuscan Tyber rolls with rapid force,
 And where *Nomicus* opens his holy source.”
 DRYDEN.

‡ *Mundina*. — Lempriere places the accent on the penultimate syllable of this word, but Labbe, Gouldman, and Holyoke, [also Carr,] on the antepenultimate. Ainsworth marks it in the same manner among the appellatives, nor can there be any doubt of its propriety.

§ *Oceana*. — So prone are the English to lay the accent on the penultimate of words of this termination, that we scarcely ever hear the famous *Oceana* of Harrington pronounced otherwise.

|| *Qeagarus*, (*Qeagrus*). — This diphthong, like *ae*, is pronounced as the single vowel *e*. If the conjecture concerning the sound of *ae* was right, the middle sound between the *o* and *e* of the ancients must, in all probability, have been the sound of our *a* in *water*. — See the word *ÆA*.

¶ *Ogyges*. — This word is, by all our prosodists, accented on the first syllable, and consequently it must sound exactly as if written *Odd'je-ges*; and this, however odd to an English ear, must be complied with. — [*Ogyg'ges* is the most correct pronunciation. The quantity is marked in the derivative *Ogygius*, in Lucan. Phars. l. 675: *Edonis Ogygio decurrit plena Lyco*. — TROLLOPE.]

* *Omphale*. — The accentuation which a mere English speaker would give to this word was experienced, a few years ago, by a pantomime called *Hercules and Omphale*, when the whole town concurred in placing the accent on the second syllable, till some classical scholars gave a check to this pronunciation by placing the accent on the first. This, however, was far from banishing the former manner, and disturbed the public ear without correcting it. Those, however, who would not wish to be numbered among the vulgar, must take care to avoid the penultimate accent.

† *Orpheus*. — See *IDOMENEUS*.

† *Oryx*. —

“And, at once, Broteus and *Oryx* slew:
Oryx's mother, *My calē*, was known,
Down from her sphere to draw the lab'ring moon.”
GARTH'S *Ovid. Met.*

§ *Palmyra*. — Nothing can be better fixed, in an English ear, than the penultimate accentuation of this word. This pronunciation is adopted by Ainsworth and Lempriere. Gouldman and Holyoke seem to look the other way; but Labbe says the more learned give this the antepenultimate accent, and that this accent is more agreeable to the general

rule. Those, however, must be pedantic coxcombs, who should attempt to disturb the received pronunciation, when in English, because a contrary accentuation may, possibly, be proved to be more agreeable to Greek or Latin.

* *Pammēnes*. — I find this word nowhere but in Lem-priere, who accents it on the penultimate! But, as all words of this termination have the antepenultimate accent, till this appears an exception, I shall venture to alter it. — [Pám'mē-nēs, Carr. *Itaque* v. 1.]

† *Pantheon*. — This word is universally pronounced with the accent on the second syllable, in English; but, in Latin, it has its first syllable accented; and this accentuation makes so slight a difference to the ear, that it ought to have the preference.

‡ *Papias*. — This is the name of an early Christian writer, who first propagated the doctrine of the millennium; and it is generally pronounced with the accent on the second syllable, but I believe corruptly, since Labbe has adopted the antepenultimate accent, who must be well acquainted with the true pronunciation of ecclesiastical characters.

§ *Parysatis*. — Labbe tells us that some prosodists contend that this word ought to be accented on the antepenultimate syllable, and we find Lempriere has so accented it; but so popular a tragedy as *Alexander*, which every where accents the penultimate, has fixed this pronunciation, in our own country, beyond a doubt.

|| *Patroclus*. — Lempriere, Ainsworth, Gouldman, and Holyoke, accent the penultimate syllable of this word, but Labbe the antepenultimate; our Graduses pronounce it either way; but I do not hesitate to prefer the penultimate accent; and, till some good reason be given for the contrary, I think *Patrocles*, the historian, and *Patrocli*, a small island, ought to be pronounced with the same accent as the friend of Achilles. — [The *o* is the Greek *omicron*; and the name should, therefore, be pronounced *Patrocl'us*, rather than *Patro'cl'us*; but the penultimate is almost invariably long. See *Homēr, passim*. — TROLOPE.] [Patroclus: — generally made long by position. Carr.]

* *Phalerus*.—There is some doubt, among the learned, whether this word ought to be pronounced in three or four syllables; that is, as *Phal-e-reus* or *Pha-le-re-us*. The latter mode, however, with the accent on the antepenultimate, seems to be the most eligible.—[See *ΙΟΜΑΧΕΥΣ*.—*TROLLOPE*.]

† *Pharnaces*.—All our prosodists accent the antepenultimate syllable of this word; but an English ear is strongly inclined to accent the penultimate, as in *Arbaces* and *Arsac-*

ces, which see.—[The antepenultimate accentuation is more probably correct.—*TROLLOPE*.]

‡ *Philomedea*.—
 “Nor less by *Philomedea* known on earth,—
 A name derived immediate from her birth.”
COOKE'S Hesiod. Theog. v. 311.
 —[This name of *Venus* is properly *Philo-medea*; which *Cooke* has converted into *Philomedea*.—*TROLLOPE*.]

* *Seulencia*. — Lempriere and Labbe accent this word on the penultimate, but Ainsworth, Gouldman, and Holyoke, on the antepenultimate. As this word, according to Strabo, had its penultimate formed of the diphthong *ei*, Σελουκεια, this syllable ought to have the accent; but, as the antepenultimate accent is so incorporated into our tongue, I would strongly recommend the pronunciation which an English scholar would give it at first sight, and that is placing the accent on the *u*. This is the accent Milne gives it: —

“Eden stretched her line
From Auran eastward to the royal towers
Of great *Seulencia*, built by Grecian kings.”

Par. Lost, b. iv.

If, however, the English scholar wishes to shine in the classical pronunciation of this word, let him take care to pronounce the *c* like *s* only, and not like *sh*, which sound it necessarily has, if the accent be on the antepenultimate syllable. See Rules 10 and 31. — [And notes. The *c* should properly be pronounced like *k*; and the next word should also have the accent on the penultimate. — TROLLOPE. — Labbe, Carr, &c., accent the antepenultimate, *Se-leu-ci-dæ*. — ΕΙΡΩΤΑ.]

† *Serapis*. — There is not a dissenting voice among our prosodists against the pronouncing of this word with the accent on the penultimate syllable; and yet, to show the tendency of English pronunciation, when a ship of this name had a desperate engagement with one of the French, which attracted the attention of the public, everybody pronounced it with the accent on the first syllable. Milton has done the same, in his sublime description of the grandeur of Pandemonium: —

“Not Babylon
Nor great Alcairo such magnificence
Equalled in all their glories to enshrine
Belus or *Serapis*, their gods; or seat
Their kings, when Egypt with Assyria strove
In wealth and luxury.”

Par. Lost, b. i. v. 717.

† *Sergiolus*. — I find this word in no dictionary but Lempriere's, and there the accent is placed upon the penultimate, instead of the antepenultimate, syllable. — [Juv. Sat. vi. 105: *Sergiolus jam redere guttur*. — TROLLOPE.]

§ *Severus*. — This word, like *Serapis*, is universally mispronounced, by the mere English scholar, with the accent on the first syllable.

* *Taygetus*, or *Taygeta*. — All our prosodists, but Lempriere, accent these words on the antepenultimate syllable, as if divided into *Ta-yg'e-tus* and *Ta-yg'e-ta*. I am, therefore, rather inclined to suppose the position marked in his Dictionary an error of the press. The lines in Lily's *Quæ Genus* will easily call to the recollection of every scholar how early he adopted the antepenultimate pronun-

“Tartara, *Taygetus*, sic Tenara, Massica, et altus Gargarus”
 † *Tercus*. — For words of this termination, see ΙΟΜΕ-
 ΝΕΥΣ.
 ‡ *Thebes*. — Thebes in Egypt was called *Hecatompyllos*, from having a hundred gates; and Thebes in Greece, *Hep-
 tapyllos*, from its seven gates.

* *Thessalonica*. — This word, like every other of a similar termination, is sure to be pronounced, by a mere English scholar, with the accent on the third syllable; but this must be avoided, on pain of literary excommunication.

† *Thon*, a physician of Egypt. Milton spells this word

with the final *e*, making it one syllable only, and consequently pronouncing it so as to rhyme with *tone* 1.

“Not that Nepenthe, which the wife of *Thone*, In Egypt, gave to Jove-born Helena, Is of such power to stir up joy as this.”

* *Troilus*.—This word is almost always heard as if it were two syllables and as if written *Troylus*. This is a corruption of the first magnitude: the vowels should be kept separate, as if written *Tro'c'us*.—See ZOLLUS.

† *Tyaneus*.—This word is only used as an adjective to Apollonius, the celebrated Pythagorean philosopher, and is formed from the town of *Tyana*, where he was born. The natural formation of this adjective would, undoubtedly, be *Tyaneus*, with the accent on the antepenultimate syllable. Labbe, at the word *Tyana*, says, "Et inde deductum *Tyaneus*, quiddam sciam reclamare nonnullos sed immerito, ut satis norunt eruditi."

The numberless authorities which might be brought for pronouncing this word either way, sufficiently show how equivocal is its accent, and of how little importance it is to which we give the preference. My private opinion coincides with Labbe; but, as we generally find it written with the diphthong, we may presume the penultimate accent has prevailed, and that it is the safest to follow.—[Unquestionably.—TROLLOPE.—Carr accents it *Ty-a'ne-us*.—EDITOR.]

‡ *Tydeus*.—This word, like several others of the same termination, was pronounced by the Greeks sometimes in

three, and sometimes in two, syllables, the *eu* considered as a diphthong. When it was pronounced in three syllables, the penultimate syllable was long, and the accent was on it, as we find it in a verse of *WILKIE'S Epigoniad*:—

"Venus, still partial to the Theban arms,
Tydeus' son seduced by female charms."

But the most prevailing pronunciation was that with the antepenultimate accent, as we generally find it in *Pope's Homer*:—

"Next came Idomeneus and Tydeus' son,
Ajax the less, and Ajax Telamon."

—See *IDOMENEUS*.

POPE'S Hom. b. ii. v. 50.

§ *Venafrum*.—Though the accent may be placed either on the antepenultimate or the penultimate syllable of this word, the latter is by far the preferable, as it is adopted by *Lempriere*, *Labbe*, *Goldman*, [also *Carr*], and other good authorities.—[*Mart. Epig. xiii. 101. 1: Bacca Venāfrī. So Hor. Od. ii. 6. 16.—TROLLOPE.*]

|| *Verrago*.—I have given this word the penultimate accent, with *Lempriere*, in opposition to *Ainsworth*, who adopts the antepenultimate.

☞ By inspecting the foregoing Vocabulary, we see that, notwithstanding all the barriers with which the learned have guarded the accentuation of the dead languages, still some words there are which despise their laws, and boldly adopt the analogy of English pronunciation. It is true, the catalogue of these is not very numerous; for, as an error of this kind incurs the penalty of being thought illiterate and vulgar, it is no wonder that a pedantic adherence to Greek and Latin should, in doubtful cases, be generally preferred.

But as the letters of the dead languages have insensibly changed their sound by passing into the living ones, so it is impossible to preserve the accent from sliding, sometimes, into the analogies of our own tongue; and when once words of this kind are fixed in the public ear, it is not only a useless, but a pernicious, pedantry to disturb them. Who could hear, without pity, of Alexander's passing the River *Grani'cus*, † or of his marrying the sister of *Parys'atis*? These words, and several others, must be looked upon as planets shot from their original spheres, and moving round another centre.

After all the care, therefore, that has been taken to accent words according to the best authorities, some have been found so differently marked by different prosodists, as to make it no easy matter to know to which we shall give the preference. In this case, I have ventured to give my opinion, without presuming to decide, and merely as an *Ἐπιτομή*, or *Interim*, till the learned have pronounced the final sentence.

* *Zenodotus*. — All our prosodists but Lempiere give this word the antepenultimate accent; and, till a good reason be given why it should differ from *Herodotus*, I must beg leave to follow the majority.

† *Zoilus*. — The two vowels, in this word, are always separated in the Greek and Latin; but, in the English pronunciation of it, they are frequently blended into a diphthong, as in the words *oil*, *boil*, &c. This, however, is an illiterate

pronunciation, and should be avoided. The word should have three syllables, and be pronounced as if written *Zo'e-lus*.

‡ [Notwithstanding this remark, Walker has placed this word with the accent on the penultimate (*Grani'cus*) in his *Terminational Vocabulary*; and it stands first with the same accent in his *Initial Vocabulary*. — See *GRANICUS*. — *Edron.*]

PREFACE

TO THE TERMINATIONAL VOCABULARY.

TAKING a retrospective view of language, or surveying it in its terminations, affords not only a new, but an advantageous view of all languages. The necessity of this view induced me, several years ago, to arrange the whole English language according to its terminations; and this arrangement I found of infinite use to me in consulting the analogies of our tongue. A conviction of its utility made me desirous of arranging the Greek and Latin proper names in the same manner, and more particularly, as the pronunciation of these languages depends more on the termination of words than any other we are acquainted with. Of such utility is this arrangement supposed to be in the Greek language, that the son of the famous Hoogveen, who wrote on the Greek Particles, has actually printed such a Dictionary, which only waits for a preface to be published. The labor of such a selection and arrangement must have been prodigious. Nor is the task I have undertaken, in the present work, a slight one; but the idea of rendering the classical pronunciation of proper names still more easy, encouraged me to persevere in the labor, however dry and fatiguing.

I flattered myself I had already promoted this end, by dividing the proper names into syllables upon analogical principles, but hoped I could still add to the facility of recollecting their pronunciation, by the arrangement here adopted; which, in the first place, exhibits the accent and quantity of every word by its termination.

In the next place, it shows the extent of this accentuation, by producing, at one view, all the words differently accented, by which means may be formed the rule and the exception.

Thirdly, when the exceptions are but few and less apt to be regarded, by seeing them contrasted with the rule they are imprinted more strongly on the memory, and are the more easily recollected. Thus, by seeing that *Sperchius*, *Xenophontius*, and *Darius* are the only words of that very numerous termination which have the accent on the penultimate, we are at perfect ease about all the rest.

Fourthly, by seeing that all words ending in *enes* have universally the antepenultimate accent, we easily recollect that the pronunciation of *Eumenes* with the accent on the penultimate is radically wrong, and is only tolerated because adopted by some respectable writers. Thus, too, the numerous termination in *ades* is seen to be perfectly antepenultimate; and the ambiguous termination in *ides* is freed, in some measure, from its intricacy, by seeing the extent of both forms contrasted. This contrast, without being obliged to go to Greek etymologies, shows, at one view, when this termination has the accent on the penultimate *i*, as in *Tydidēs*, and when it transfers the accent to the antepenultimate, as in *Thucydides*; which depends entirely on the quantity of the original word from which these patronymics are formed.

And, lastly, when the number of words pronounced with a different accent are nearly equal, we can, at least, find some way of recollecting their several accentuations better than if they were promiscuously mingled with all the rest of the words in the language. By frequently repeating them, as they stand together, the ear will gain a habit of placing the accent properly, without knowing why it does so. In short, if Labbe's *Catholici Indices*, which is in the hands of all the learned, be useful for readily finding the accent and quantity of proper names, the present Index cannot fail to be much more so, as it not only associates them by their accent and quantity, but according to their termination also; and by this additional association, it must necessarily render any diversity of accent more easily perceived and remembered.

To all which advantages it may be added, that this arrangement has enabled me to point out the true sound of every termination; by which means, those who are totally unacquainted with the learned languages, will find themselves instructed in the true pronunciation of the final letters of every word, as well as its accent and quantity.

It need scarcely be observed, that in the following Index, almost all words of two syllables are omitted; for, as dissyllables in the Greek and Latin languages are always pronounced with the accent on the first, it was needless to insert them. The same may be observed of such words as have the vowel in the penultimate syllable followed by two consonants; for in this case, unless the former of these consonants were a mute, and the latter a liquid, the penultimate vowel was always long, and consequently always had the accent. This analogy takes place in our pronunciation of words from the Hebrew, which, with the exception of some few that have been Anglicized, such as *Bethlehemite*, *Nazarene*, &c., have the accent, like the Greek and Latin words, either on the penultimate or antepenultimate syllable.

It might have been expected that I should have confined myself to the insertion of proper names alone, without bringing in the gentile adjectives, as they are called, which are derived from them. This omission would, undoubtedly, have saved me immense trouble; but these adjectives, being sometimes used as substantives, made it difficult to draw the line; and, as the analogy of accentuation was, in some measure, connected with these adjectives, I hoped the trouble of collecting and arranging them would not be entirely thrown away.

* *Elegia*. — The ancients sometimes separated the vowels *ei* in this termination, and sometimes pronounced them as a diphthong. The general mode of pronouncing them with us is to consider them as a diphthong, and to pronounce it as long or double *e*; which, from its squeezed sound, approaches to the initial *y*, and makes these words pronounced as if written *Ele-je'yah*, *Hyg-je'yah*, &c. This is the pronunciation which ought to be adopted; but scholars who are fond of displaying their knowledge of Greek will be sure to pronounce *Elegia*, *Hygia*, or rather *Hygia*, *Anthia*, and *Deiopia*, with the diphthong like the noun *eye*; while *Cartheia*, or *Cartheia*, *Aquileia*, *Pompeia*, and *Tarpeia*, of Latin original, are permitted to have their diphthongs sounded like double *e*, or, which is nearly the same thing, if the vowels be separated, to sound the *e* long, as in *equal*, and the *i* as *y* consonant, articulating the final *a*. — See note on *Achaia*.

For a more complete idea of the sound of this diphthong, see the word *PLEIADES*, in the *Initial Vocabulary*. To which observations we may add, that when this diphthong in Greek is reduced to the single long *i* in Latin, as in *Iphigenia*, *Elegia*, &c., it is pronounced like single *i*, that is, like the noun *eye*.

† *Deidamia*. — See Rule 30.

‡ *Iphigenia*. — See this word in the *Initial Vocabulary*.

§ *Samaria*. — For the accent of this word and *Alexandria*, see Rule 30, prefixed to the *Initial Vocabulary*.

|| *-sia*. — The *s* in this termination, when preceded by a vowel, ought always to be sounded like *zh*, as if written *Amazhia*, *Aspazhia*, &c. *Asia*, *Theodosia*, and *Sosia*, seem to be the only exceptions.

* *eius*. — Almost all the words of this termination are adjectives, and in these the vowels *ei* form distinct syllables; the others, as *Cocceius*, *Saleius*, *Procleius*, *Canuleius*, *Apuleius*, *Egnatuleius*, *Scheneius*, *Lampeius*, *Vultureius*, *Atteius*, and *Minyeius*, are substantives; and which, though sometimes pronounced with the *ei* forming a diphthong, and sounded like the noun *eye*, are more generally heard like the adjectives; so that the whole list may be fairly included under the same general rule, that of sounding the *e* separately, and the *i* like *y* consonant, as in the similar terminations in *cia* and *ia*. This is the more necessary in these words, as the accented *e* and the unaccented *i* are so much alike as to require the sound of the initial or consonant *y*, in order to

prevent the hiatus, by giving a small diversity to the two vowels. — See *ACHAÏA*.

† *Heraclius*. — Labbe [also Carr] places the accent of this word on the penultimate *i*, as in *Heraclitus* and *Heraclida*; but the Roman emperor of this name is so generally pronounced with the antepenultimate accent, that it would savor of pedantry to alter it. Nor do I understand the reasons on which Labbe founds his accentuation.

‡ *Basilus*. — This word, the learned contend, ought to have the accent on the penultimate *i*; but that the learned frequently depart from this pronunciation, by placing the accent on the antepenultimate, may be seen, Rule 31, prefixed to the *Initial Vocabulary*. [Basilus, Carr. — *Enrico*.]

PRONUNCIATION

OF

SCRIPTURE PROPER NAMES.

ADVERTISEMENT.

THE true pronunciation of the Hebrew language, as Doctor Lowth observes, is lost. To refer us for assistance to the Masoretic points, would be to launch us on a sea without shore or bottom. The only compass by which we can possibly steer, on this boundless ocean, is the Septuagint version of the Hebrew Bible; and as it is highly probable the translators transfused the sound of the Hebrew proper names into the Greek, it gives us something like a clew to guide us out of the labyrinth. But even here, we are often left to guess our way; for the Greek word is frequently so different from the Hebrew, as scarcely to leave any traces of similitude between them. In this case custom and analogy must often decide, and the ear must sometimes solve the difficulty. But these difficulties relate chiefly to the *accentuation* of Hebrew words; and the method adopted in this point will be seen in its proper place.

I must here acknowledge my obligations to a very learned and useful work,—the “*Scripture Lexicon*” of Mr. Oliver. As the first attempt to facilitate the pronunciation of Hebrew proper names, by dividing them into syllables, it deserves the highest praise; but, as I have often differed widely from this gentleman in syllabication, accentuation, and the sound of the vowels, I have thought it necessary to give my reasons for this difference, which will be seen under the Rules; of the validity of which reasons the reader will be the best judge.

N. B. As there are many Greek and Latin proper names in Scripture, particularly in the New Testament, which are to be met with in ancient history, some of them have been omitted in this selection; and therefore, if the inspector do not find them here, he is desired to seek for them in the *Vocabulary of Greek and Latin Names*.

RULES FOR PRONOUNCING SCRIPTURE PROPER NAMES.

1. In the pronunciation of the letters of the Hebrew proper names, we find nearly the same rules prevail as in those of Greek and Latin. Where the vowels end a syllable with the accent on it, they have their long, open sound; as, *Na'bal*, *Jehu*, *Sirach*, *Go'shen*, and *Tu'bal*.—See Rule 1, prefixed to the Greek and Latin Proper Names.

2. When a consonant ends the syllable, the preced-

ing vowel is short; as, *Sam'u-el*, *Lem'u-el*, *Sim'e-on*, *Sol'o-mon*, *Suc'coth*, *Syn'a-gogue*. (See Rule 2, prefixed to the Greek and Latin Proper Names.) I here differ widely from Mr. Oliver; for I cannot agree with him that the *e* in *Abdiel*, the *o* in *Arnon*, and the *u* in *Ashur*, are to be pronounced like the *ee* in *seen*, the *o* in *tone*, and the *u* in *tune*, which is the rule he lays down for all similar words.*

* [Mr. Oliver is unquestionably right in principle, and Mr. Walker wrong; but, though the analogy both of the Greek and Hebrew is in favor of the former, the general

practice, and the analogy of the English language, are in favor of the latter.—TROLLOPE.]

3. Every final *i* forming a distinct syllable, though unaccented, has the long, open sound, as *A'i*, *Ari'a-i*. — See Rule 4, prefixed to the Greek and Latin Proper Names.

4. Every unaccented *i* ending a syllable not final, is pronounced like *e*, as *A'ri-el*, *Ab'di-el*, pronounced *A're-el*, *Ab'de-el*. — See Rule 4, prefixed to the Greek and Latin Proper Names.

5. The vowels *ai* are sometimes pronounced in one syllable, and sometimes in two. As the Septuagint version is our chief guide in the pronunciation of Hebrew proper names, it may be observed, that when these letters are pronounced as a diphthong in one syllable, like our English diphthong in the word *daily*, they are either a diphthong in the Greek word, or expressed by the Greek *ai* or *i*; as, *Bena'iah*, *Bavala*; *Hu'shai*, *Xaal*; *Hu'rai*, *Ougl*, &c.; and that when they are pronounced in two syllables, as *Sham'ma-i*, *Shash'a-i*, *Ber-a-iah*, it is because the Greek words by which they are translated, as, *Σαμυλ*, *Σολε*, *Βαβυλα*, make two syllables of these vowels. Mr. Oliver has not always attended to this distinction: he makes *Sin'a-i* three syllables, though the Greeks made it but two in *Σινω*. That accurate prosodist, Labbe, indeed, makes it a trisyllable; but he does the same by *Aaron* and *Canaan*, which our great classic, Milton, uniformly reduces to two syllables, as well as *Sinai*. If we were to pronounce it in three syllables, we must necessarily make the first syllable short, as in *Shim'e-i*; but this is so contrary to the best usage, that it amounts to a proof that it ought to be pronounced in two syllables, with the first *i* long, as in *Shinar*. This, however, must be looked upon as a general rule only; these vowels in *Isaiah*, Græcized by *Ἰσαΐας*, are always pronounced as a diphthong, or at least with the accent on the *a*, and the *i* like *y*, articulating the succeeding vowel; in *Cataphas*, likewise, the *ai* is pronounced like a diphthong, though divided in the Greek *Καταφας*;* which division cannot take place in this word, because the *i* must then necessarily have the accent, and must be pronounced as in *Isaac*, as Mr. Oliver has marked it, but I think contrary to universal usage. The only point necessary to be observed in the sound of this diphthong, is the slight difference we perceive between its medial and final position; when it is final, it is exactly like the English *ay* without the accent, as in *holyday*, *roundelay*, *galloway*; but when it is in the middle of a word, and followed by a vowel, the *i* is pronounced as if it were *y*, and as if this *y* articulated the succeeding vowel; thus *Ben-a'iah* is pronounced as if written *Ben-a'yah*.

6. *Ch* is pronounced like *k*, as *Chebar*, *Chemosh*, *Enoch*, &c., pronounced *Kebar*, *Kemosh*, *Enock*, &c. *Cherubim* and *Rachel* seem to be perfectly Anglized, as the *ch*, in these words, is always heard as in the English words *cheer*, *child*, *riches*, &c. — (See Rule 12, prefixed to the Greek and Latin Proper Names.) The same may be observed of *Cherub*, signifying an order of angels; but when it means a city of the Babylonish empire, it ought to be pronounced *Ke'rub*. †

7. Almost the only difference in the pronunciation of the Hebrew, and the Greek and Latin, proper names, is in the sound of the *g* before *e* and *i*. In the last two languages, this consonant is always soft before these

vowels; as, *Gellius*, *Glypius*, &c., pronounced *Jellius*, *Jippius*, &c.; and in the first it is hard; as, *Gera*, *Gerizim*, *Gideon*, *Gulgul*, *Megiddo*, *Megididon*, &c. This difference is without all foundation in etymology; for both *g* and *c* were always hard in the Greek and Latin languages, as well as in the Hebrew; but, the latter language being studied so much less than the Greek and Latin, it has not undergone that change which familiarity is sure to produce in all languages; and even the solemn distance of this language has not been able to keep the letter *c* from sliding into *s*, before *e* and *i*, in the same manner as in the Greek and Latin; thus, though *Gehazi*, *Aideon*, &c., have the *g* hard, *Cedron*, *Cedron*, *Cisal*, and *citern* have the *c* soft, as if written *Sedrom*, *Sedron*, &c. The same may be observed of *Igebarim*, *Igeal*, *Nagge*, *Shage*, *Pagiel*, with the *g* hard, and *Ocdebus*, *Ocina*, and *Pharacion*, with the *c* soft like a *z*.

8. Gentiles, as they are called, ending in *ines* and *ites*, as *Philistines*, *Hivites*, *Hittites*, &c., being Anglized in the translation of the Bible, are pronounced like formatives of our own; as, *Philistins*, *Whitfieldites*, *Jacobites*, &c.

9. The unaccented termination *ah*, so frequent in Hebrew proper names, ought to be pronounced like the *a* in *father*. The *a* in this termination, however, frequently falls into the indistinct sound heard in the final *a* in *Africa*, *Aina*, &c.; nor can we easily perceive any distinction, in this respect, between *Elijah* and *Elisha*; but the final *h* preserves the other vowels open; as, *Calchozeh*, *Shiloh*, &c., pronounced *Cothozee*, *Shilo*, &c. (See Rule 7, prefixed to the Greek and Latin Proper Names.) The diphthong *ei* is always pronounced like *ee*; thus *Sa-me'ius* is pronounced as if written *Sa-mee'us*. But if the accent be on the *ah*, then the *a* ought to be pronounced like the *a* in *father*; as, *Tah'era*, *Tah'pe-ne*, &c.

10. It may be remarked, that there are several Hebrew proper names, which, by passing through the Greek of the New Testament, have conformed to the Greek pronunciation; such as *Aceldama*, *Genezareth*, *Bethphage*, &c., pronounced *Aseldama*, *Jenezareth*, *Bethphaje*, &c. This is, in my opinion, more agreeable to the general analogy of pronouncing these Hebrew-Greek words, than preserving the *e* and *g* hard.

Rules for Ascertaining the English Quantity of the Vowels in Hebrew Proper Names.

11. With respect to the quantity of the first vowel in disyllables, with but one consonant in the middle, I have followed the rule which we observe in the pronunciation of such disyllables, when Greek or Latin words, (see Rule 13, prefixed to the Greek and Latin Proper Names;) and that is, to place the accent on the first vowel, and to pronounce that vowel long, as, *Ko'rah*, and not *Kor'ah*, *Mo'loch*, and not *Mol'och*, as Mr. Oliver has divided them, in opposition both to analogy and the best usage. I have observed the same analogy in the penultimate of polysyllables, and have not divided *Balthasar* into *Bul-thas'ar*, as Mr. Oliver has done, but into *Baltha'sar*.

* [It is not necessary to make either *Ἰσαΐας* or *Καταφας* more than a trisyllable. — TROLOPE.]

† [According to analogy, *ch* should always be pronounced like *k*; and a Hebraist, in reading Hebrew, would so pronounce it, as well in *Cherub* as in *Chebar*. This would, however, savor of affectation in English; and even the ap-

pearance of affectation, in reading the Scriptures, cannot be too studiously avoided. — TROLOPE.]

‡ [It is usual to hear the *g* and *c* pronounced universally hard, as partially; and as many of the clergy call the word *Cedron* as *Sedron*. — TROLOPE.]

12. In the same manner, when the accent is on the antepenultimate syllable, whether the vowel end the syllable or be followed by two consonants, the vowel is always short, except followed by two vowels, as in Greek and Latin proper names. (See Rules prefixed to these names, Nos. 13, 19, 20, &c.) Thus *Jehoshaphat* has the accent on the antepenultimate syllable, according to Greek accentuation by quantity, (see Introduction to this work,) and this syllable, according to the clearest analogy of English pronunciation, is short, as if spelt *Je-hos'a-phat*. The secondary accent has the same shortening power in *Othonias*, where the primary accent is on the third, and the secondary on the first syllable, as if spelt *Oth-oni'as*; and it is on these two fundamental principles of our own pronunciation, namely, the lengthening power of the penultimate, and the shortening power of the antepenultimate accent, that I hope I have been enabled to regulate and fix many of those sounds which were floating about in uncertainty, and which, for want of this guide, are differently marked by different orthoëpists, and often differently by the same orthoëpist.

Rules for Placing the Accent on Hebrew Proper Names.

13. With respect to the accent of Hebrew words, it cannot be better regulated than by the laws of the Greek language. I do not mean, however, that every Hebrew word which is Græcized by the Septuagint should be accented exactly according to the Greek rule of accentuation; for if this were the case, every word ending in *el* would never have the accent higher than the preceding syllable; because it was a general rule in the Greek language, that when the last syllable was long, the accent could not be higher than the penultimate. Nay, strictly speaking, were we to accent these words according to the accent of that language, they ought to have the accent on the last syllable, because *'Αβδηλ* and *'Ισραήλ*, *Abdiel* and *Israel*, have the accent on that syllable. It may be said that this accent on the last syllable is the grave, which, when on the last word of a sentence, or succeeded by an enclitic, was changed into an acute. But here, as in words purely Greek, we find the Latin analogy prevail; and because the penultimate is short, the accent is placed on the antepenultimate, in the same manner as in *Socrates*, *Sosthenes*, &c., though the final syllable of the Greek words *Σωκράτης*, *Σωσθένης*, &c., is long, and the Greek accent on the penultimate. (See Introduction prefixed to the Rules for Pronouncing Greek and Latin Proper Names.) It is this general prevalence of accenting according to the Latin analogy, that has induced me, when the Hebrew word has been Græcized in the same number of syllables, to prefer the Latin accentuation to what may be called our own. Thus, *Cathua* coming to us through the Greek *Καθουά*, I have accented it on the penultimate, because the Latins would have placed the accent on this syllable, on account of its being long, though an English ear would be better pleased with the antepenultimate accent. The same reason has induced me to accent *Chaseba* on the antepenultimate, because it is Græcized into *Χασεβιά*. But when the Hebrew and Greek word does not contain the same number of syl-

lables, as *Mes'o-bah*, *Μεσοβία*, *Id'u-el*, *'Ιδουήλος*, it then comes under our own analogy, and we neglect the long vowel, and place the accent on the antepenultimate. The same may be observed of *Mordecai*, from *Μαδοχαΐος*.*

14. As we never accent a proper name from the Greek on the last syllable, (not because the Greeks did not accent the last syllable, for they had many words accented in that manner, but because this accentuation was contrary to the Latin prosody,) so if the Greek word be accented on any other syllable, we seldom pay any regard to it, unless it coincide with the Latin accent. Thus in the word *Gede'rah*, I have placed the accent on the penultimate, because it is Græcized by *Γέδρηα*, where the accent is on the antepenultimate; and this because the penultimate is long, and this long penultimate has always the accent in Latin. (See this further exemplified, Rule 13, prefixed to the Greek and Latin Proper Names, and Introduction, near the end.) Thus, though it may seem, at first sight, absurd to derive our pronunciation of Hebrew words from the Greek, and then to desert the Greek for the Latin, yet, since we must have some rule, and, if possible, a learned one, it is very natural to lay hold of the Latin, because it is nearest at hand. For as language is a mixture of reasoning and convenience, if the true reason lie too remote from common apprehension, another more obvious one is generally adopted; and this last, by general usage, becomes a rule superior to the former. It is true, the analogy of our own language would be a rule the most rational; but while the analogies of our own language are so little understood, and the Greek and Latin languages are so justly admired, even the appearance of being acquainted with them will always be esteemed reputable, and infallibly lead us to an imitation of them, even in such points as are not only insignificant in themselves, but inconsistent with our vernacular pronunciation.

15. It is remarkable that all words ending in *ias* and *iah* have the accent on the *i*, without any foundation in the analogy of Greek and Latin pronunciation, except the very vague reason that the Greek word places the accent on this syllable. I call this reason vague, because the Greek accent has no influence on words in *acl*, *iel*, *ial*, &c.; as, *'Ισραήλ*, *'Αβδηλ*, *Βελλιά*, &c. &c.

Hence we may conclude the impropriety of pronouncing *Messias* with the accent on the first syllable, according to Labbe, who says we must pronounce it in this manner, if we wish to pronounce it like the French with the *os rotundum et facundum*; and, indeed, if the *i* were to be pronounced in the French manner, like *e*, placing the accent on the first syllable seems to have the bolder sound. This may serve as an answer to the learned critic, the editor of Labbe, who says, "The Greeks, but not the French, pronounce *ore rotundo*;" for though the Greeks might place the accent on the *i* in *Μααλας*, yet as they certainly pronounced this vowel as the French do, it must have the same slender sound, and the accent on the first syllable must, in that respect, be preferable to it; for the Greek *i*, like the same letter in Latin, was the slenderest of all the vowel sounds. It is the broad, diphthongal sound of the English *i*, with the accent on it, which makes this word sound so much better in English than it does in French, or even in the true ancient Greek pronunciation.

16. The termination *aim* seems to attract the accent

* [The reader must judge how far this rule, in minor points, is correct. It is needless to say, that the editor can-

not entirely accord with it. The accentuation should certainly be *Meso'bah*, *Idu'el*. — TROLLOPE.]

on the *a* only in words of more than three syllables, as *E'phra-im* and *Miz'ra-im* have the accent on the antepenultimate, but *Ho-ro-na'im*, *Ram-a-tha'im*, &c., on the penultimate syllable. This is a general rule; but, if the Greek word have the penultimate long, the accent ought to be on that syllable; as, *Phar-va'im*, *Φαροῦν*, &c.

17. *Kemuel*, *Jemuel*, *Nemuel*, and other words of the same form, having the same number of syllables as the Greek words into which they are translated, ought to have the accent on the penultimate, as that syllable is long in Greek; but *Emanuel*, *Samuel*, and *Lemuel*,* are irrecoverably fixed in the antepenultimate accentuation, and show the true analogy of the accentuation of our own language.

18. Thus we see what has been observed of the tendency of Greek and Latin words to desert their original accent, and to adopt that of the English, is much more observable in words from the Hebrew. Greek and Latin words are fixed in their pronunciation by a thousand books written expressly upon the subject, and ten thousand occasions of using them; but Hebrew words, from the remote antiquity of the language, from the paucity of books in it, from its being originally written without points, and the very different style of its poetry from that of other languages, afford us scarcely any criterion to recur to for settling their pronunciation, which must, therefore, often be irregular and desultory. The Septuagint, indeed, gives us some light, and is the only star by which we can steer; but this is so frequently obscured as to leave us in the dark, and force us to pronounce according to the analogy of our own language. It were to be wished, indeed, that this were to be entirely adopted in Hebrew words,

where we have so little to determine us, and that those words which we have worn into our own pronunciation were to be a rule for all others of the same form and termination; but it is easier to bring about a revolution in kingdoms than in languages. Men of learning will always form a sort of literary aristocracy; they will be proud of the distinction which a knowledge of languages gives them above the vulgar, and will be fond of showing this knowledge, which the vulgar will never fail to admire and imitate.

The best we can do, therefore, is to make a sort of compromise between this ancient language and our own; to form a kind of compound ratio of Hebrew, Greek, Latin, and English, and to let each of these prevail as usage has permitted them. Thus *Emanuel*, *Samuel*, *Lemuel*, which, according to the Latin analogy and our own, have the accent on the antepenultimate syllable, ought to remain in quiet possession of their present pronunciation, notwithstanding the Greek *Ἐμμανουήλ*, *Σαμουήλ*, *Λεμουήλ*; but *Elishua*, *Esdrelon*, *Gederah*, may have the accent on the penultimate, because the Greek words into which they are translated, *Ἐλισοῦν*, *Ἐσδρηλώμ*, *Γάδρα*, have the penultimate long. If this should not appear a satisfactory method of settling the pronunciation of these words, I must entreat those who dissent from it to point out a better. A work of this kind was wanted for general use; it is addressed neither to the learned nor the illiterate, but to that large and most respectable part of society who have a tincture of letters, but whose avocations deny them the opportunity of cultivating them. To these a work of this kind cannot fail of being useful; and by its utility to these the author wishes to stand or fall.

* [Not *Lemuel*, which is frequently pronounced with the penultimate accent. *Emanuel* and *Samuel* are so completely

Anglicized as to render the Hebrew and Greek pronunciation intolerable to an English ear. — TROLLOPE.]

SCRIPTURE PROPER NAMES.

INITIAL VOCABULARY.

In this edition of this Key, the pronunciation of the words is in accordance with Walker's principles, but designated by the use of marked letters. All the words that seemed to need it, have been respelled, and thus any special reference, by numbers, to the preceding *Rules of Walker*, is rendered unnecessary.

With respect to the pronunciation of a considerable number of words, the deviations of several ortho-

pists from Walker, are exhibited. These orthoepists are *Oliver, Perry, Smart, Carr*, and also *Taylor* the editor of "Calmet's Dictionary of the Bible."

In relation to the words of which there is a diversity of pronunciation, the pronunciation given by Walker always stands first.

The abbreviation (O.) stands for *Oliver*; (P) for *Perry*; (Sm.) for *Smart*; (C.) for *Carr*; and (T.) for *Taylor*.

* *Aaron*.—This is a word of three syllables in Labbe, who says it is used to be pronounced with the accent on the penultimate; but the general pronunciation of this word in English is in two syllables, with the accent on the first, and as if written *Aaron*. Milton uniformly gives it this syllabication and accent:—

“Till by two brethren (those two brethren call
Moses and *Aaron*) sent from God to claim
His people from intralment.”

Par. Lost, b. xii. v. 170.

† *Abarim*.—This and some other words are decided in their accentuation, by Milton, in the following verses:—

“From Arar to Nebo, and the wild
Of southmost *Abarim* in Hesebon,
And Horonaim, Seon's realm, beyond
The flowery dale of Sibma clad with vines,
And Elelé to th' Asphaltic pool.”

Par. Lost, b. i. v. 407.

“————— Yet his temple high
Reared in Azotus, dreathed through the coast
Of Palestine, in Gath and Ascalon,
And *Aacaron* and Gaza's frontier bounds.”

Id. 463.

‡ *Abram*, or *Abraham*.—The first name, of two syllables, was the patriarch's original name; but God increased it to the second, of three syllables, as a pledge of an increase in blessing. The latter name, however, from the feebleness of the *ā* in our pronunciation of it, and from the absence of the accent, is liable to such an hiatus, from the proximity of two similar vowels, that, in the most solemn pronunciation, we seldom hear this name extended to three syllables. Milton has but once pronounced it in this manner, but has six-times made it only two syllables; and this may be looked upon as the general pronunciation.

§ *Adonai*.—Labbe, says his editor, makes this a word of three syllables only; which, if once admitted, why, says

he, should he dissolve the Hebrew diphthong in *Sadaī, Sinaī, Tolmaī, &c.*, and at the same time make two syllables of the diphthong in *Castelw*, which are commonly united into one? In this, says he, he is inconsistent with himself.—See *SINAL*.

* [In most of the editions of Walker's Key, this word is placed in the *Initial Vocabulary* with the accent on the penultimate, (*À-mā'sa*); but in the *Terminational Vocabulary*, in the different editions, it has the accent on the antepenultimate, (*Àm'a-sa*).—EDITOR.]

† *Amen*.—The only simple word in the language which has necessarily two successive accents.—[See *AMEN* in this Dictionary.—EDITOR.]

‡ *Anathema*.—Those who are not acquainted with the profound researches of verbal critics, would be astonished to observe what waste of learning has been bestowed on this word by Labbe, in order to show that it ought to be accented on the antepenultimate syllable. This pronunciation has been adopted by English scholars; though some divines have been heard, from the pulpit, to give it the penultimate accent, which so readily unites it in a trochaic pronunciation with *maranatha*, in the First Epistle of St. Paul to the Corinthians: "If any man love not the Lord Jesus Christ, let him be *Anathema maranatha*."

§ *Areopagus*.—There is a strong propensity, in English readers of the New Testament, to pronounce this word

with the accent on the penultimate syllable; and even some foreign scholars have contended that it ought to be so pronounced, from its derivation from *Ἄρεος πάγος*, the Doric dialect for *πηγή*, the fountain of Mars, which was on a hill in Athens, rather than from *Ἄρεος πάγος*, the hill of Mars. But Labbe very justly despises this derivation, and says, that of all the ancient writers, none have said that the *Areopagus* was derived from a fountain, or from a country near to a fountain; but all have confessed that it came from a hill, or the summit of a rock, on which this famous court of judicature was built. Vossius tells us that St. Augustine, De Civ. Dei, l. x. cap. 10, calls this word *pagum Martis*, the village of Mars, and that he fell into this error because the Latin word *pagus* signifies a village or street; but, says he, the Greek word signifies a hill, which, perhaps, was so called from *πάγος* or *πηγή*, (that is, fountain,) because fountains usually take their rise on hills. Wrong, however, as this derivation may be, he tells us it is adopted by no less scholars than Beza, Budeus, and Sigonius. And this may show us the uncertainty of etymology in language, and the security of general usage; but, in the present case, both etymology and usage conspire to place the accent on the antepenultimate syllable. Agreeably to this usage, we find the prologue to a play observe that

"The critics are assembled in the pit,
And form an *Areopagus* of wit."

* *Amadai*. — Mr. Oliver has not inserted this word, but we have it in Milton: —

“On each wing
Uriel and Raphael his vaunting foe,
Though huge, and in a rock of diamond armed,
Vanquished, Adramelech and *Amadai*.”

Par. Lost, b. vi. v. 365.

Whence we may guess the poet's pronunciation of it in

three syllables; the diphthong sounding like the *ai* in *daily*. — See Rule 5, and the words *SNAI* and *ADONAI*.

† *Azazel*. — This word is not in Mr. Oliver's Lexicon; but Milton makes use of it, and places the accent on the second syllable: —

“_____ that proud honor claimed
Azazel as his right; a cherub tall.”

Par. Lost, b. i. v. 534.

‡ *Balaam*. — See *CANAAN*, *AARON*, and *ISRAEL*.

* Bethphage. — This word is generally pronounced, by the illiterate, in two syllables, and without the second h, as if written Beth'page.

† Canaan. — This word is not unfrequently pronounced in three syllables, with the accent on the second. But Milton, who, in his Paradise Lost, has introduced this word six times, has constantly made it two syllables, with the accent on the first. This is perfectly agreeable to the syllabication and accentuation of Isaac and Balaam, which are always heard in two syllables. This suppression of a syllable, in the latter part of these words, arises from the absence of accent. An accent on the second syllable would prevent the hiatus arising from the two vowels, as it does in Baal

and Baalim, which are always heard in two and three syllables respectively. — See ADONAI.

† Capernaum. — This word is often, but improperly, pronounced with the accent on the penultimate.

§ Cherub. — See Rule 6.

¶ Deborah. — The learned editor of Labbe tells us that this word has the penultimate long, both in Greek and Hebrew; and yet he observes that our clergy, when reading the Holy Scriptures to the people in English, always pronounce it with the accent on the first syllable; "and why not," says he, "when they place the accent on the first syllable of orator, auditor, and successor? But," continues he, "I suppose they accent them otherwise, when they speak Latin." Who doubts it?

* *Israel*.—This word is colloquially pronounced in two syllables, and not unfrequently heard in the same manner from the pulpit. The tendency of two vowels to unite, when there is no accent to keep them distinct, is the cause of this corruption, as in *Canaan, Isaac, &c.*; but, as there is a greater difficulty in keeping separate two unaccented vowels of the same kind, so the latter corruption is more excusable than the former; and therefore, in my opinion, this word ought always, in public pronunciation, especially in reading the Scripture, to be heard in three syllables. Milton introduces this word four times in his *Paradise Lost*, and constantly makes it two syllables only. But those who un-

derstand English prosody know that we have a great number of words, which have two distinct impulses, that go for no more than a single syllable in verse, such as *heaven, given, &c.*; *higher* and *dyer* are always considered as disyllables, and *hire* and *dire*, which have exactly the same quantity to the ear, but as monosyllables. *Israel*, therefore, ought always, in deliberate and solemn speaking, to be heard in three syllables. The same may be observed of *Raphael* and *Michael*.

† [*Jairus*.—Our author had accented this word *Jâ'i-rus*, and would pronounce it *Jâ'ê-rus*; but he is wrong beyond all dispute. The Greek name is *Ίακώβος*.—TROLLÖP.]

* *Raphael*.—This word has uniformly the accent on the first syllable throughout Milton, though Græcized by 'Paqahā; but the quantity is not so invariably settled by him; for, in his *Paradise Lost*, he makes it four times of three syllables, and twice of two. What is observed under *Israel* is applicable to this word. Colloquially, we may pronounce it in two, as if written *Raphel*; but, in deliberate and solemn speaking or reading, we ought to make the two last vowels be heard separately and distinctly. The same may be observed of *Michael*, which Milton, in his *Paradise Lost*, uses six times as a word of three syllables, and eight times as a word of two only.

† *Sabathani*.—Some, says the editor of Labbe, place the accent on the antepenultimate syllable of this word, and others on the penultimate; this last pronunciation, he says, is most agreeable to the Hebrew word, the penultimate of which is not only long, but accented; and, as this word is Hebrew, it is certainly the preferable pronunciation.

‡ *Sabaoth*.—This word should not be confounded in its pronunciation with *Sabbath*, a word of so different a signification. *Sabaoth* ought to be heard in three syllables, by keeping the *a* and *o* separate and distinct. This, it must be confessed, is not very easy to do, but is absolutely necessary to prevent a very gross confusion of ideas, and a perversion of the sense.—[According to the Masoretic points, the word is *Sab-a'oth*.—TROLLOPE. See SABAOth, in the Dictionary.—EDITOR.]

§ *Satan*.—There is some dispute, among the learned, about the quantity of the second syllable of this word, when Latin or Greek, as may be seen in Labbe, but none about the first. This is acknowledged to be short; and this has induced those critics who have great knowledge of Latin, and very little of their own language, to pronounce the first syllable short in English, as if written *Sattan*. If these gentlemen have not perused the *Principles of Pronunciation*, prefixed to

the *Critical Pronouncing Dictionary*, I would take the liberty of referring them to what is there said, for full satisfaction, for whatever relates to deriving English quantity from the Latin. But, for those who have not an opportunity of inspecting that work, it may, perhaps, be sufficient to observe, that no analogy is more universal than that which, in a Latin word of two syllables, with but one consonant in the middle, and the accent on the first syllable, leads us to pronounce that syllable long. This is, likewise, the genuine pronunciation of English words of the same form; and, where it has been counteracted, we find a miserable attempt to follow the Latin quantity in the English word, which we entirely neglect in the Latin itself. (See *Introduction*, page 845.) *Cato* and *Plato* are instances where we make the vowel *a* long in English where it is short in Latin, and *caligo* and *cogito* where we make the *a* and *o* in the first syllable short in English when it is long in Latin. Thus, if a word of two syllables, with one consonant in the middle, and the accent on the first, which, according to our *Cato* and *Plato*, with the first vowel long,—if this word, I say, happen to be derived from a word of three syllables in Latin, with the first short, this is looked upon as a good reason for shortening the first syllable of the English word, as in *magic*, *placid*, *tepid*, &c., though we violate this rule in the pronunciation of the Latin words *caligo*, *cogito*, &c., which, according to this analogy, ought to be *calc-i-go*, *cog-e-ito*, &c., with the first syllable long.

This pedantry, which ought to have a harsher title, has considerably hurt the sound of our language, by introducing into it too many short vowels, and consequently rendering it less flowing and sonorous. The tendency of the penultimate accent to open and lengthen the first vowel in dissyllables, with but one consonant in the middle, in some measure counteracts the shortening tendency of two consonants, and the almost invariable shortening tendency of the antepenultimate accent; but this analogy, which seems to be

the genuine operation of nature, is violated by these ignorant critics from the pitiful ambition of appearing to understand Latin. As the first syllable, therefore, of the word in question, has its first vowel pronounced short, for such miserable reasons as have been shown, and this short pronunciation does not seem to be general, as may be seen under the word in the *Critical Pronouncing Dictionary*, we ought certainly to incline to that pronunciation which is so agreeable to the analogy of our own language, and which is, at the same time, so much more pleasing to the ear. — [Whatever may be the analogy of English, it is clear that the true pronunciation is *Sav'an*. Neither are *caligo* and *cogito* pronounced as the author states them to be. In most schools, the long vowels retain their proper sound. — TROLLOPE. *Ca-ti-go*, not *Cal-ti-go*. See SATAN, in the Dictionary. — EDIRON.]

* *Silaa*. — This word, according to the present general rule of pronouncing these words, ought to have the accent on the second syllable, as it is Græcized by Σιλῶα; but Milton, who understood its derivation as well as the present race of critics, has given it the antepenultimate accent, as more agreeable to the general analogy of accenting English words of the same form: —

“Or if Sion hill
Delight thee more, or *Silaa's* brook, that flowed
Fast by the oracle of God.”

If criticism ought not to overturn settled usages, surely, when that usage is sanctioned by such a poet as Milton, it ought not to be looked upon as a license, but an authority. With respect to the quantity of the first syllable, analogy requires

that, if the accent be on it, it should be short. (See Rules prefixed to the Greek and Latin Proper Names, Rule 19.) — [Milton can be no authority against positive fact. The Greek name is decisive. See our author's next note. — TROLLOPE.] [SÍ'l'q-á, c. & T.]

† *Sinai*. — If we pronounce this word after the Hebrew, it is three syllables; if after the Greek, Σινῶ, two only; though it must be confessed that the liberty allowed to poets of increasing the end of a line with one, and sometimes two, syllables, renders their authority, in this case, a little equivocal. Labbe adopts the former pronunciation, but general usage seems to prefer the latter; and, if we almost universally follow the Greek in other cases, why not in this? Milton adopts the Greek: —

“Sing, heavenly muse! that on the secret top
Of Oreb or of *Sinai* didst inspire
That shepherd —”

“God, from the mount of *Sinai*, whose gray top
Shall tremble, he, descending, will himself,
In thunder, lightning, and loud trumpets' sound,
Ordain them laws.”

Par. Lost, b. xii. v. 227.

We ought not, indeed, to lay too much stress on the quantity of Milton, which is often so different in the same word; but these are the only two passages in his *Paradise Lost* where this word is used; and, as he has made the same letters a diphthong in *Asmadai*, it is highly probable he judged that *Sinai* ought to be pronounced in two syllables. (See Rules prefixed to this Vocabulary, No. 5.)

* *Zabulon*. — "Notwithstanding," says the editor of Labbe, "this word, in Greek, Ζαβυλὼν, has the penultimate long, yet in our churches we always hear it pronounced with the acute on the antepenultimate. Those who thus pronounce it plead that, in Hebrew, the penultimate vowel

is short; but, in the word *Zorobabel*, Ζοροβάβελ, they follow a different rule; for, though the penultimate in Hebrew is long, they pronounce it with the antepenultimate accent."

ADVERTISEMENT.

AFTER the many learned pens which have been employed on the subject of the following Observations, the author would have been much ashamed of obtruding his humble opinion on so delicate a point, had he not flattered himself that he had taken a material circumstance into the account, which had been entirely overlooked by almost every writer he had met with.

It is not a little astonishing, that, when the nature of the human voice forms so great a part of the inquiry into accent and quantity, its most marking distinctions should have been so little attended to. From a perusal of every writer on the subject,* one would be led to suppose that high and low, loud and soft, and quick and slow, were the only modifications of which the voice was susceptible; and that the inflections of the voice, which distinguish speaking from singing, did not exist. Possessed, therefore, of this distinction of sounds, the author at least brings something new into the inquiry; and if, even with this advantage, he should fail of throwing light on the subject, he is sure he shall be entitled to the indulgence of the learned, as they fully understand the difficulty of the question.

* The only exception to this general assertion is Mr. Steele, the author of "Prosodia Rationalis;" but the design of this gentleman is not so much to illustrate the accent and quantity of the Greek language as to prove the possibility of forming a notation of speaking sounds for our own, and of reducing them to a musical scale, and accompanying them with instruments. The attempt is undoubtedly laudable, but no further useful than to show the impossibility of it by the very method he has taken to explain it; for it is wrapped up in such an impenetrable cloud of

music as to be unintelligible to any but musicians; and the distinctions of sound are so nice and numerous as to discourage the most persevering student from laboring to understand him. After all, what light can we expect will be thrown on this subject by one who, notwithstanding the infinitesimal distinctions he makes between similar sounds, says that the *u* in *ugly*, and the *e* in *met* and *get*, are diphthongs; that the *a* in *may* is long, and the same letter in *nation* short; and that the *u* in *you, use, &c.* is always acute-grave, and the *i* in *idle, try, &c.* grave-acute?

PREPARATORY OBSERVATIONS.

As a perusal of the Observations on Greek and Latin Accent and Quantity requires a more intimate acquaintance with the nature of the voice than is generally brought to the study of that subject, it may not be improper to lay before the reader such an explanation of speaking sounds as may enable him to distinguish between high and loud, soft and low, forcibleness and length, and feebleness and shortness, which are so often confounded, and which consequently produce such confusion and obscurity among our best prosodists.

But, as describing such sounds upon paper as have no definite terms appropriated to them, like those of music, is a new and difficult task, the reader must be requested to give as nice an attention as possible to those sounds and inflections of voice, which spontaneously annex themselves to certain forms of speech, and which, from their familiarity, are apt to pass unnoticed. But if experience were out of the question, and we were only acquainted with the organic formation of human sounds, we must necessarily distinguish them into five kinds; namely, the monotone, or one sound continuing a perceptible time in one note, which is the case with all musical sounds; a sound beginning low and sliding higher, or beginning high and sliding lower, without any perceptible intervals, which is essential to all speaking sounds. The two last may be called simple slides or inflections; and these may be so combined as to begin with that which rises, and end with that which falls, or to begin with that which falls, and end with that which rises; and if this combination of different inflections be pronounced with one impulse or explosion of the voice, it may not improperly be called the circumflex, or compound inflection; and this monotone, the two simple and the two compound inflections, are the only modifications, independent on the passions, of which the human voice is susceptible.

The Different States of the Voice

The modifications of the voice, which have just been enumerated, may be called absolute, because they cannot be converted into each other, but must remain decidedly what they are; while different states of the voice, as high and low, loud and soft, quick and slow, are only comparative terms, since what is high in one case may be low in another, and so of the rest. Beside, therefore, the modifications of voice which have been described, the only varieties remaining, of which the human voice is capable, except those produced by the passions, are high, low, loud, soft, quick, slow, forcible, and feeble. Though high and loud, and low and soft, are frequently confounded, yet, when considered distinctly, their difference is easily understood; as, if we strike a large bell with a deep tone, though it gives a very low tone, it will still be a low one; and, if we strike a small bell with a high tone, it will still be a high tone, though the stroke be ever so soft. A quick tone, in music, is that in which the same tone continues but a short time, and a slow tone where it continues longer; but in speaking, a quick tone is that when the slide rises from low to high, or falls from high to low, in a short time, and a slow tone the reverse; while forcible and feeble seem to be severally compounded of two of these simple states; that is, force seems to be loudness and quickness, either in a high or low tone also; and feebleness seems to be softness and slowness, either in a high or a low tone likewise. As to the tones of the passions, which are so many and various, these, in the opinion of one of the best judges in the kingdom, are *qualities* of sound, occasioned by certain vibrations of the organs of speech, independent on high, low, loud, soft, quick, slow, forcible, or feeble; which last may not improperly be called different *quantities* of sound.

It may not, perhaps, be unworthy of observation, how few are these principles, which, by a different combination with each other, produce that almost unbounded variety of which human speech consists. The different quantities of sound, as these different states of the voice may be called, may be combined so as to form new varieties with any other that are not opposite to them. Thus high may be combined with either loud or soft, quick or slow; that is, a high note

may be sounded either in a loud or soft tone, and a low note may be sounded either in a loud or a soft tone also, and each of these tones may be pronounced either in a longer or a shorter time; that is, more slowly or quickly; while forcible seems to imply a degree of loudness and quickness; and feeble, a degree of softness and slowness, either in a high or a low tone. These combinations may, perhaps, be more easily conceived by classing them in contrast with each other:—

High, loud, quick.
Low, soft, slow.

Forcible may be high, loud, and quick; or low, loud, and quick. Feeble may be high, soft, and slow; or low, soft, and slow.

The different combinations of these states may be thus represented:—

High, loud, quick, forcible.	Low, loud, quick, forcible.
High, loud, slow.	Low, loud, slow.
High, soft, quick.	Low, soft, quick.
High, soft, slow, feeble.	Low, soft, slow, feeble.

When these states of the voice are combined with the five modifications of voice above mentioned, the varieties become exceedingly numerous, but far from being innumerable. Perhaps they may amount (for I leave it to arithmeticians to reckon them exactly) to that number into which the ancients distinguished the notes of music, which, if I remember right, was about two hundred.

These different states of the voice, if justly distinguished and associated, may serve to throw some light on the nature of accent. If, as Mr. Sheridan asserts, the accented syllable be only louder, and not higher, than the other syllables, every polysyllable is a perfect monotone. If the accented syllable be higher than the rest, which is the general opinion both among the ancients and moderns, this is true only when a word is pronounced alone, and without reference to any other word; for when suspended at a comma, concluding a negative member followed by an affirmative, or asking a question beginning with a verb, if the unaccented syllable or syllables be the last, they are higher than the accented syllable, though not so loud. So that the true definition of accent is this:—*If the word be pronounced alone, and without any reference to other words, the accented syllable is both higher and louder than the other syllables either before or after it; but, if the word be suspended, as at the comma, if it end a negative member followed by an affirmative, or if it conclude an interrogative sentence beginning with a verb, in each case the accented syllable is louder and higher than the preceding, and louder and lower than the succeeding syllables.* This will be sufficiently exemplified in the following pages. In the mean time, it may be observed, that if a degree of swiftness enter into the definition of force, and the accented syllable be the most forcible, it follows that the accent does not necessarily lengthen the syllable, and that if it fall on a long vowel, it is only a longer continuation of that force with which it quickly or suddenly commenced; for as the voice is an efflux of air, and air is a fluid like water, we may conceive a sudden gush of this fluid to continue either a longer or a shorter time, and thence form an idea of long or short quantity. If, however, this definition of force, as applied to accent, should be erroneous or imaginary, let it be remembered it is an attempt to form a precise idea of what has hitherto been left in obscurity; and that, if such an attempt should fail, it may at least induce some curious inquirer to show where it fails, and to substitute something better in its stead.

If these observations be just, they may serve to show how ill-founded is the opinion of that infinite variety of voice of which speaking sounds consist. That a wonderful variety may arise from the key in which we speak, from the force or feebleness with which we pronounce, and from the tincture of passion or sentiment we infuse into the words, is acknowledged; but, speak in what key we will, pronounce with what force or feebleness we please, and infuse whatever tincture of passion or sentiment we can imagine into the tones, still they must necessarily be pronounced with one of the foregoing modifications of the voice. Let us go into whatever twists or zigzags of tone we will, we cannot

go out of the boundaries of these inflections. These are the outlines on which all the force and coloring of speech is laid; and these may be justly said to form the first principles of speaking sounds.

Exemplification of the Different Modifications of the Voice. The Monotone, the Rising Inflection, the Falling Inflection, the Rising Circumflex, and the Falling Circumflex.

Though we seldom hear such a variety in reading or speaking as the sense and satisfaction of the ear demand, yet we hardly ever hear a pronunciation perfectly monotonous. In former times, we might have found it in the midnight pronunciation of the Bellman's verses at Christmas; and now the Town Crier, as Shakspeare calls him, sometimes gives us a specimen of the monotonous, in his vociferous exordium—"This is to give notice!" The clerk of a court of justice also promulgates the will of the court by that barbarous metamorphosis of the old French word *Oyez! Oyez!* Hear ye! Hear ye! into *O yes! O yes!* in a perfect sameness of voice. But however ridiculous the monotone in speaking may be in the above-mentioned characters, in certain solemn and sublime passages in poetry it has a wonderful propriety, and by the uncommonness of its use, it adds greatly to that variety with which the ear is so much delighted.

This monotone may be defined to be a continuation or sameness of sound upon certain words or syllables, exactly like that produced by repeatedly striking a bell: such a stroke may be louder or softer, but continues in exactly the same pitch. To express this tone, a horizontal line may be adopted;—such a one as is generally used to signify a long syllable in verse. This tone may be very properly introduced in some passages of Akenside's *Pleasures of Imagination*, where he so finely describes the tales of horror related by the village matron to her infant audience:—

"Breathing astonishment! of witching rhymes
And evil spirits; of the death-bed call
To him who robbed the widow, and devoured
The orphan's portion; of unquiet souls
Risen from the grave to ease the heavy guilt
Of deeds in life concealed; of shapes that walk
At dead of night, and clank their chains, and wave
The torch of hell around the murderer's bed."

If the words "of shapes that walk at dead of night" be pronounced in a monotone, it will add wonderfully to the variety and solemnity of the passage.

The rising inflection is that upward turn of the voice we generally use at the comma, or in asking a question beginning with a verb; as, "Nó, say you? did he say N6?" This is commonly called a suspension of voice, and may not improperly be marked by the acute accent, thus (´).

The falling inflection is generally used at the semicolon and colon, and must necessarily be heard in answer to the former question: "*He aid: he said Nò.*" This inflection, in a lower tone of voice, is adopted at the end of almost every sentence, except the definite question, or that which begins with the verb. To express this inflection, the grave accent seems adapted, thus (˘).

The rising circumflex begins with the falling inflection, and ends with the rising upon the same syllable, and seems, as it were, to twist the voice upwards. This inflection may be exemplified by the drawling tone we give to some words spoken ironically; as the word *Clódius*, in Cicero's Oration for Milo. This turn of voice may be marked in this manner (ˆ):—

"But it is foolish in us to compare Drusus Africanus and ourselves with Clódius; all our other calamities were tolerable, but no one can patiently bear the death of Clódius."

The falling circumflex begins with the rising inflection, and ends with the falling upon the same syllable, and seems to twist the voice downwards. This inflection seems generally to be used in ironical reproach; as on the word *you*, in the following example:—

"So, then, you are the author of this conspiracy against me? It is to you that I am indebted for all the mischief that has befallen me?"

If to these inflections we add the distinction of a phrase into accental portions, as,
"Prosperity | gains friends | and adversity | tries them," | and pronounce *friends* like an unaccented syllable of *gains*, and like an unaccented syllable of *adversity*, and *them* like an unaccented syllable of *tries*, we have a clear idea of the relative forces of all the syllables, and approximate closely to a notation of speaking sounds.

OBSERVATIONS

ON THE

GREEK AND LATIN ACCENT, &c.

1. In order to form an idea of the Accent and Quantity of the dead languages, it will be necessary first to understand what we mean by the accent and quantity of our own language;* and as quantity is supposed by some to regulate the accent in English as well as in Greek and Latin, it will be necessary first to inquire what we mean by long and short vowels, or, as some are pleased to term them, syllables.

2. In English, then, we have no conception of quantity arising from any thing but the nature of the vowels, as they are pronounced long or short. Whatever retardation of voice in the sound of a vowel there might be in Greek or Latin before two consonants, and those often twin consonants, we find every vowel in this situation as easily pronounced short as long; and the quantity is found to arise from the length or shortness we give to the vowel, and not from any obstruction of sound occasioned by the succeeding consonants. Thus the *a* in *banish, banner, and banter*, is short in all these words, and long in *paper, taper, and vapor*; the *i* long in *miser, minor, and mitre*, and short in *misery, middle, and mistress*; and so of the rest of the vowels; and though the accent is on the first syllable of all these words, we see it perfectly compatible with either long or short quantity.

3. As a further proof of this, we may observe, that unac-

cented vowels are frequently pronounced long, when the accented vowels are short. Thus the *o* in *Cicero*, in English as well as in Latin pronunciation, is long, though unaccented; and the *i* short, though under the accent. The same may be observed of the name of our English poet *Lillo*. So in our English words *cónclave, réconcile, chámonile*, and the substantives *cónfine, pérfume*, and a thousand others, we see the first accented syllable short, and the final unaccented syllable long. Let those who contend that the acute accent and long quantity are inseparable, call the first vowels of these words long, if they please; but by those who make their ear, and not their eye, the judge of quantity, when compared with the last vowels, they will always be esteemed short. †

4. The next object of inquiry is, What is the nature of English accent? Mr. Sheridan, ‡ with his usual decision, tells us, that accent is only a greater force upon one syllable than another, without any relation to the elevation or depression of the voice; while almost every other writer on the subject makes the elevation or depression of the voice inseparable from accent. When words are pronounced in a monotone, as the bellman repeats his verses, the clerical pronounces his advertisement, or the clerk of a church gives out the psalm, we hear an *ictus* or accentual force upon the

* It is not surprising that the accent and quantity of the accents should be so obscure and mysterious, when two such learned men of our own nation as Mr. Forster and Dr. Gally differ about the very existence of quantity in our own language. The former of these gentlemen maintains, that "the English have both accent and quantity, and that no language can be without them;" but the latter asserts, that, "in the modern languages, the pronunciation doth not depend upon a natural quantity, and therefore a greater liberty may be allowed in the placing of accents." And in another place, speaking of the northern languages of Europe, he says, that "it was made impossible to think of establishing quantity for a foundation of harmony, in pronunciation. Hence it became necessary to lay aside the consideration of quantity, and to have recourse to accents." "In these and some other passages, that writer," says Forster, "seems to look upon accents as alone regulating the pronunciation of English, and quantity as excluded from it." — *Forster's Essay on Accent and Quantity*, p. 23.

As a further proof of the total want of ear in a great Greek scholar, Lord Monbodo says, "Our accents differ from the Greek in two material respects; first, they are not appropriated to particular syllables of the word, but are laid upon different syllables, according to the fancy of the speaker, or rather as it happens; for I believe no man speaking English does, by choice, give an accent to one syllable of a word different from that which he gives to another."

"Two things, therefore, that, in my opinion, constitute our verse, are the number of syllables, and the mixture of loud and soft, according to certain rules. As to quantity, it is certainly not essential to our verse, and far less is accent." — See Steele's *Prosodia Rationalis*, p. 103, 110.

† A late very learned and ingenious writer tells us that our accent and quantity always coincide; he objects to himself the words *signify, magnify, qualify*, &c., where the final syllable is longer than the accented syllable; but this, he asserts, with the greatest probability, was not the accentuation of our ancestors, who placed the accent on the last syllable, which is naturally the longest. But this sufficiently proves that the accent does not necessarily lengthen the syllable it

falls on; that is, if length consist in pronouncing the vowel long, which is the natural idea of long quantity, and not in the duration of the voice upon a short vowel occasioned by the retardation of sounding two succeeding consonants, which is an idea, though sanctioned by antiquity, that has no foundation in nature; for who, that is not prejudiced by early opinion, can suppose the first syllable of *elbow* to be long, and the last short? — See *Essay on Greek and Latin Prosodies*: printed for Robson.

‡ The term (accent) with us has no reference to inflections of the voice or musical notes, but only means a peculiar manner of distinguishing one syllable of a word from the rest. — *Lectures on Elocution*, quarto edition, p. 41.

"To illustrate the difference between the accent of the ancients and that of ours," says Mr. Sheridan, "let us suppose the same movements beat upon the drum, and sounded by the trumpet. Take, for instance, a succession of words where the accent is on every second syllable, which forms an iambic movement; the only way by which a drum (as it is incapable of any change of notes) can mark that movement, is by striking a soft note first, followed by one more forcible, and so in succession. Let the same movement be sounded by the trumpet, in an alternation of high and low notes, and it will give a distinct idea of the difference between the English accents and those of the ancients." — *Art of Reading*, p. 75.

I am sorry to find one of the most ingenious, learned, and candid inquirers into this subject of the same opinion as Mr. Sheridan. The authority of Mr. Nares would have gone near to shake my own opinion, if I had not recollected that this gentleman confesses he cannot perceive the least of a diphthongal sound in the *i* in *strike*, which Dr. Wallis, he observes, excludes from the simple sounds of the vowels. For if the definition of a vowel sound be, that it is formed by one position of the organs, nothing can be more perceptible than the double position of them in the present case, and that the noun *eye*, which is perfectly equivalent to the pronoun *I*, begins with the sound of *a* in *father*, and ends in that of *e* in *equal*. — See NARES'S *English Orthoëpy*, pp. 2, 144.

several accented syllables, which distinguishes them from the others, but no more variety of tone than if we were to beat the syllables of the same words upon a drum, which may be louder or softer, but cannot be either higher or lower. This is pronouncing according to Mr. Sheridan's definition of accent; and this pronunciation certainly comes under the definition of singing; — it is singing ill, indeed, as Julius Cæsar said of a bad reader, but still it is singing, and therefore essentially different from speaking; for in speaking, the voice is continually *sliding* upwards or downwards, and in singing, it is *leaping*, as it were, from a lower to a higher, or from a higher to a lower tone, — the only two possible ways of varying the human voice, with respect to elevation or depression; — so that when we are told by some writers on this subject, that the speaking of the ancients was a *kind* of singing, we are led into the error of supposing that singing and speaking differ only in degree, and not in kind, whereas they are just as different as motion and rest.*

5. Whenever, in speaking, we adopt a singing tone, (which was formerly the case with Puritan preachers,) it differs essentially from speaking, and can be pricked down upon paper, and be played upon a violin; and whenever, in singing, we adopt a speaking tone, the slide of this tone is so essentially distinct from singing, as to shock the ear like the harshest discord. Those, therefore, who rank recitativo as a medium between singing and speaking, are utterly ignorant of the nature of both. Recitativo is just as much singing as what is called *air*, or any other species of musical composition.

6. If we may have recourse to the eye, the most distinct and definite of all our senses, we may define musical notes to be horizontal lines, and speaking tones oblique lines; the one rises from low to high, or falls from high to low, by distinct intervals, as the following straight lines

to the eye; — — — the other slides upwards or downwards, as the following oblique lines:  nor is

the one more different to the eye than the other is to the ear. Those, therefore, who gravely tell us that the enunciation of the ancients was a kind of musical speaking, impose upon us with words to which we can annex no ideas; and when they attempt to illustrate this musico-speaking

* It is not denied, that the slides in speaking may sometimes leap, as it were, from a low to a high, or from a high to a low note; that is, that there may be a very considerable interval between the end of one of those slides and the beginning of another; as between the high note in the word *no*, in the question, *Did he say No?* and the low note which the same word may adopt in the answer, *No, he did not*. But the sound which composes the note of speaking, as it may be called, and the sound which composes the note of singing, are essentially distinct; the former is in continual motion, while the latter is for a given time at rest. — See Note to sect. 23.

† How the ancients could make every monosyllable accented, (that is, according to their definition of accent, pronounced with an elevated tone of voice,) without telling us how this elevation happened, whether it were an elevation of one part of the syllable above the other, or the elevation of one word or syllable above other words or syllables, — how these distinctions, I say, so absolutely necessary to a precise idea of accent, should never be once mentioned, can be resolved into nothing but that attachment to words without ideas, and that neglect of experiment, which have involved the moderns in the same mist of ignorance and error.

‡ That excellent scholar, Mr. Forster, furnishes an additional instance of the possibility of uniting a deep and accurate knowledge of what is called the prosody of the ancients, with a total ignorance of the accent and quantity of his own language. After a thousand examples to show how the English is susceptible of every kind of metre among the ancients, (though in all his examples he substitutes English accent for Greek and Latin quantity,) he proceeds to show the difference between the English, the Irish, and the Scotch pronunciation.

“The English join the acute and long time together, as in *liberty*, *y* short. The Scotch observe our quantity, and alter our accent, *liberty*, *y* short. When I say they observe our quantity, I mean they pronounce the same syllable long circumflex with which they make it longer. In respect to the be remarked, that it is not formed as the Greek, Latin, and English, of an acute and grave, but of a grave and acute: *vôcés*, *rôcés*, *rôund*, English: *rôund*, Scotch.

“The Irish observe our quantity and accent too, but with a greater degree of spirit or emphasis, which Scaliger calls *afflato in latitudine*, giving to most syllables an aspiration.” — *Essay on Accent and Quantity*, p. 75.

pronunciation by referring us to the Scotch and other dialects, they give us a rhetorical flourish instead of a real example; for however the Scotch and other speakers may draw out the accent, and give the vowel a greater length than the English, it is always in an oblique, and not in a straight line; for the moment the straight line of sound, or the monotone, is adopted, we hear something essentially distinct from speaking.

7. As high and low, loud and soft, forcible and feeble, are comparative terms, words of one syllable pronounced alone, and without relation to other words or syllables, cannot be said to have any accent. † The only distinction to which such words are liable, is an elevation or depression of voice, when we compare the beginning with the end of the word or syllable. Thus a monosyllable, considered singly, rises from a lower to a higher tone in the question *No?* which may, therefore, be called the acute accent; and falls from a higher to a lower tone, upon the same word, in the answer *No*, which may, therefore, be called the grave. But when the accented word or syllable is associated with unaccented words or syllables, the acute accent is louder and higher than the preceding, and louder and lower than the succeeding syllables, as in the question, *Satisfactorily, did he say?* and the grave accent both louder and higher than either the preceding or succeeding syllables, in the answer, *He said satisfactorily*. Those who wish to see this explained more at large may consult *Elements of Elocution*, page 183, or *Rhetorical Grammar*, 3d edition, p. 77.

8. This idea of accent is so evident, upon experiment, as to defy contradiction; and yet, such is the general ignorance of the modifications of the voice, that we find those who pretend to explain the nature of accent the most accurately, when they give us an example of the accent in any particular word, suppose it always pronounced affirmatively and alone; † that is, as if words were always pronounced with one inflection of voice, and as if there were no difference with respect to the nature of the accent, whether the word is an affirmation or a question, in one part of the sentence or in another; when nothing can be more palpable, to a correct ear, than that the accents of the word *voluntary*, in the following sentences, are essentially different: —

His resignation was *voluntary*.

He made a *voluntary* resignation.

In both, the accent is on the first syllable. In the first sentence, the accented syllable is higher and louder than the

Mr. Forster falls exactly into the mistake of Mr. Sheridan, though he has a quite different idea of accent. He supposes *liberty* always pronounced by an Englishman in one manner, and that as a single word, or at the end of a sentence; he has not the least notion of the different inflection the same word may have, according as the accent is differently inflected, as we may plainly perceive in the following question: “Is it *liberty* or *licentiousness* you plead for?” where the English raise the voice on the latter syllable, as the Scotch too frequently do. With respect to the quantity of the first syllable, which Mr. Forster says the Scotch preserve in this word, I must dissent from him totally; for they preserve the accent, and alter the quantity, by pronouncing the first syllable as if written *leeberty*. If Mr. Forster call this syllable long in the English pronunciation of it, I should be glad to be told of a shorter accented syllable than the first of *liberty*; if he say the accent being on it renders it long, I answer, this subverts his whole system; for if accent falling on any vowel make it long, the quantity of the Greek and Latin is overturned, and *cæno*, in the first line of the *Æneid*, must be a spondee.

This is the consequence of entering on the discussion of a difficult point, without first defining the terms; — nothing but confusion and contradiction can ensue.

But I must give this writer great credit for his saying the Scotch pronunciation abounds with the circumflex; for this is really the case; and the very circumflex opposite to the Greek and Latin, beginning with the grave, and ending with the acute. I am not, however, a little astonished that this did not show him how deficient the ancients were in this modification of the voice; which, though used too frequently in Scotland, is just as much in the human voice as the other circumflex, and may be, and is often, used in England, with the utmost propriety. With respect to the common circumflex on Greek, Latin, and some French words, the accidental use of it is quite unknown, and it only stands for long quantity; but both these circumflexes are demonstrable upon the human voice in speaking, and may be made as evident by experiment as the stress of an accented syllable, by pronouncing the word on which it is placed. — See *Rhetorical Grammar*, 3d edit. p. 80.

I must just take notice of the inaccuracy of Mr. Forster, in saying the last syllable of *liberty* is short, and yet that it has the circumflex accent: this is contrary to all the prosody of antiquity, and contrary to the truth of the case in this instance; for it is the length of the first syllable, arising from the circumflex on it, which distinguishes the Scotch from the English pronunciation.

other syllables; and in the second, it is louder and lower than the rest. The same may be observed of the following question:—

Was his resignation *voluntary* or *involuntary*?

where the first syllable of the word *voluntary* is louder and lower than the succeeding syllables; and in the word *involuntary* it is louder and higher. Those who have not ears sufficiently delicate to discern this difference, ought never to open their lips about the acute or grave accent, as they are pleased to call them; let them speak of accent, as it relates to stress only, and not to elevation or depression of voice, and then they may speak intelligibly.

9. A want of this discernment has betrayed Mr. Forster into obscurity and contradiction. To say nothing of his asserting that the English, Irish, and Scotch accents differ, (where accent cannot possibly mean stress, for then English verse would not be verse in Ireland and Scotland,) what shall we think of his telling us, that in England, we pronounce the word *majesty* * with an acute accent and long quantity upon the first syllable, and the two last syllables with the grave accent and short quantity; and that in Scotland this word is pronounced with a grave accent and long quantity on the first syllable, and with an acute accent and short quantity on the last? Now, if by accent be meant stress, nothing is more evident than that the English and Scotch, with the exception of very few words, place the accent on the same syllable; but if elevation be included in the idea of accent, it is as evident that the English pronounce the first syllable louder and higher than the two last, when they pronounce the word either singly, or as ending a sentence; as,

“He spoke against the king’s *majesty*.”

and louder and lower than the two last, when it is the last accented word but one in a sentence; as,

“He spoke against the *majesty* of the king;”

or when it is the last word in asking a question, beginning with a verb; as,

“Did he dare to speak against the king’s *majesty*?”

10. Where then is the difference, it will be asked, between the English and Scotch pronunciation? I answer, precisely in this, that the Scotch are apt to adopt the rising circumflex and long quantity, where the English use the simple rising inflection and short quantity. Thus in the word *majesty*, as well as in every other of the same form, they generally adopt the rising inflection, as in the two last sentences, whether it end a question beginning with a verb, as, “Is this the picture of his *majesty*?” or whether it end an affirmative sentence, as, “This is the picture of his *majesty*.” And it is the prevalence of this long quantity with the rising inflection, that forms the principal difference between the English and Scotch pronunciation.

11. Having thus endeavored to ascertain the accent and quantity of our own language, let us next inquire into the nature of the accent and quantity of the ancients.

12. The long quantity of the ancients must arise either from a prolongation of the sound of the vowel, or from that delay of voice which the pronunciation of two or more consonants in succession are supposed naturally to require. Now, vowels were said to be either long by nature, or long by position. Those long by nature † were such as were long, though succeeded by a single consonant, as the *u* in *natura*, and were a sort of exception to the general rule; for a vowel before a single consonant was commonly short, as in every *u* in the word *tumulus*. Those vowels which were long by position were such as were succeeded by two or more consonants, as the first *o* in *sponsor*; but if the long and short quantity of the ancients was the same distinction of the sound of the vowel as we make in the words *cadens* and

magic, calling the first *a* long, and the second short, then the *a* in *mater* and *pater* § must have been pronounced like our *a* in *later* and *latter*; and those vowels which were long by position, as the *a* in *Bacchus* and *campus*, must have been sounded by the ancients as we hear them in the English words *bake* and *came*.

13. If, therefore, the long quantity of the ancients were no more than a retardation of voice on the consonants, or that duration of sound which an assemblage of consonants is supposed naturally to produce without making any alteration in the sound of the vowel, such long quantity as this an English ear has not the least idea of. Unless the sound of the vowel be altered, we have not any conception of a long or short syllable; and the first syllables of *banish*, *banter*, and *banter*, have, to our ears, exactly the same quantity.

14. But, if the long quantity of the ancients arose naturally from the obstruction the voice meets with in the pronunciation of two or more consonants, how does it happen that the preceding consonants do not lengthen the vowel as much as those which succeed? Dr. Gally tells us the reason of this is, “that the vowel being the most essential part of the syllable, the voice hastens to seize it; and in order to do this, it slurs over all the consonants that are placed before it, so that the voice suffers little or no delay. But the case of the consonant that follows is not the same; it cannot be slurred over, but must be pronounced full and distinct, otherwise it would run into, and be confounded with, the following syllable. By this means the voice is delayed more in the latter than in the former part of the syllable, and *δ'* is longer than *σσο*, and *η* longer than *σολη*.”

I must own myself at a loss to conceive the force of this reasoning. I have always supposed the consonant, when it forms part of a syllable, to be as essential to its sound as the vowel; nor can I conceive why the latter consonants of a syllable may not be pronounced as rapidly as the former, without running the former syllable into the latter, and thus confounding them together; since no such confusion arises when we end the first syllable with the vowel, and begin the following syllable with the consonants; as, *pro-crasino*, *pro-stratus*, &c.; as in this case, there is no consonant to stop the first syllable, and prevent its running into the second; so that Dr. Gally seems to have *slurred* over the matter, rather than to have explained it; but as he is the only writer who has attempted to account for the manner in which quantity is produced by consonants, he is entitled to attention.

15. In the first place, then, in words of more than one syllable, but one consonant can belong to the preceding vowel, as the others must necessarily be considered as belonging to the succeeding vowel, and, according to Dr. Gally, must be hurried over, that the voice may seize its favorite letter. As one consonant, therefore, does not naturally produce long quantity, where is the delay, if the other consonants be hurried over? and, consequently, where is the long quantity which the delay is supposed to produce? This is like adding two nothings together to produce a something.

16. But what does he mean by the necessity there is of pronouncing the latter consonant full and distinct, that it may not run into, and be confounded with, the following syllable? Must not every consonant be pronounced full and distinct, whether we pronounce it rapidly or slowly, whether before or after the vowel? Is not the *str* in *stratæmen* pronounced as full and distinct, as the same letters in *castra*, *castrator*, &c.? I know there is a shadow of difference, by pronouncing the vowel in our short English manner, so as to unite with the *s*, as if written *cas*; but if we make the preceding vowel long, as in *case*, and, according to the rules of syllabification laid down by Ramus, Ward, and the Latin grammarians, carry the consonants to the succeeding syllable, as if written *cas-stray*, we find these consonants pronounced exactly in the same manner; and this

* Would not any one suppose, by Mr. Forster’s producing this word as an example of the English accent, that the English always pronounced it one way, and that as if it ended a declarative sentence? This is exactly like the mistake of Priscian, in the word *Natura*.—See sect. 20, in the Notes.

† So much are the critics puzzled to reconcile the tragic and comic verses of the ancients to the laws of metre, that a learned writer in the *Monthly Review* for May, 1762, speaking of the corrections of Dr. Heath, in his notes or readings of the old Greek tragedians, says,—

“These emendations are much more excusable than such as are made merely for the sake of the metre, the rules of which are so extremely vague and various, as they are laid down by the metrical critics, that we will venture to say any chapter in *Robinson Crusoe* might be reduced to measure by them. This is not conjecture; the thing shall be proved:

‘As I was rummaging about her, { *lambicus dimeter hyper-*
I found several *catalectus.*
Things that I wanted, *Dochmaicus.*
A fire-shovel and tongs, *Dactylicus dimeter.*
Two brass kettles, *Dochmaicus ex epitrito*
 *quarto et syllabâ.*

A pot to make chocolate, { *Periodus brachycatalectus.*
Some horns of fine glazed powder, *Euripideus.*
A gridiron, and seven { *Dactylicus penthemimeris.*
Ral other necessaries? *Basis anapestica cum syllabâ.*‡

‡ If the long quantity of the Greek and Latin arose naturally from the retardation of sound occasioned by the succeeding consonants, the long vowels in this situation ought to have been termed long by nature, and those long vowels which come before single consonants should have been called long by custom; since it was nothing but custom made the vowel *e* in *decus* (honor) short, and in *dedo* (to give) long; and the vowel *o* in *ovum* (an egg) long, and in *ovo* (to triumph) short.

§ I do not here enter into the question concerning the ancient sound of the Latin *a*, which I am convinced was like our *a* in *water*; but whether it were like the *a* in *paper*, *father*, or *water*, is not of any importance in the present question; the quantity is the same, supposing it to have been any one of them.

|| *Dissertation against pronouncing the Greek Language according to Accents*, Dissert. ii. p. 50, second edition.

leads us to suppose that double consonants were the signs only, and not the efficient, of long quantity; and that this same long quantity was not simply a duration of sound upon the consonants, but exactly what we call long quantity, — a lengthening of the sound by pronouncing the vowel open, as if we were to pronounce the *a* long in *mater*, by sounding it as if written *mayer*; and the same letter short in *pater*, as if it were written *patter*.*

17. The reason of our repugnance to admit of this analogy of quantity in the learned languages is, that a diametrically opposite analogy has been adopted in the English, and, I believe, in most modern tongues, — an analogy which makes the vowel long before one consonant, and short before more than one.

18. If, however, the quantity of the ancients lay only in the vowel, which was lengthened and shortened in our manner by altering the sound, how strange must have been their poetical language, and how different from the words taken singly! Thus the word *nec*, which, taken singly, must have been pronounced with the vowel short, like our English word *neck*, — in composition, as in the line of Virgil, where it is long,

“Fulgura, *nec* diri toties arsere cometa,”

this word must have been pronounced as if written *neck*; just as differently as the words *proper*, *of*, *mankind*, *is*, and *man*, in the line of Pope, would be pronounced by the same rule,

“The proper study of mankind is man;”

and as if written,

“The *propeer* study *ove mane-kind ces mane*.”*

When to this alteration of the quantity, by the means of succeeding consonants, we add that rule,

“Finalem cæsura brevem producere gaudet,”

which makes the short or doubtful vowel long, that either immediately precedes the cæsura, or concludes the hexameter verse, — what must be our astonishment at this very different sound of the words, arising merely from a different collocation of them, and at the strange variety and ambiguity to the ear this difference must occasion! †

19. But if this system of quantity among the ancients appear strange and unaccountable, our wonder will not be diminished when we inquire into the nature of their accent.

20. From what has been said of accent and quantity in our own language, we may conclude them to be essentially distinct and perfectly separable; nor is it to be doubted that they were equally separable in the learned languages; instances of this from the scholiasts and commentators are innumerable; but so loose and indefinite are many of their expressions, so little do they seem acquainted with the analysis of the human voice, that a great number of quotations are produced to support the most opposite and contradictory systems. Thus Vossius, Henninius, and Dr. Gally, produce a great number of quotations which seem to confound ac-

* That exceedingly corroborates this idea of quantity is, the common or doubtful vowels, as they are called; that is, such as come before a mute and a liquid; as the first *a* in *patria*, the *e* in *refluo*, &c.; as in these words the vowel preceding the mute and liquid is either long or short, as the writer or speaker pleases to make it; but if the consonants naturally retarded the sound of the syllable, so as to make it long, how could this be? If the syllable were to be made long, did the speaker dwell longer on the consonants, and if it were to be made short, did he hurry them over? And did this make the difference in the quantity of these syllables? The utter impossibility of conceiving this to have been the case renders it highly probable that the long or short quantity lay only in the vowel.

† See this idea of the different sounds of words, when taken singly, and when in composition, most excellently treated by the author of the *Greek and Latin Prosodies*, attributed to the present bishop of St. Asaph, p. 101.

‡ It is not astonishing that learned men will wrangle with each other for whole pages about the sense of a word in Dionysius of Halicarnassus, upon the difference between singing and speaking sounds, when this difference is just as open to them, by experiment, as it was to him? Who can sufficiently admire the confidence of Isaac Vossius, who says, — “In cantu latus evagari sonos, quam in recitatione aut communi sermone, utpote in quo vitiosum habeatur, si vox ultra *diapente*, seu tres tonos et semitonum, acuat.” In singing, the sound has a larger compass than in reading or common speaking, inasmuch that, in common discourse, whatever is higher than the *diapente* is held to be extremely vicious.

§ Thus Priscian: “In unaquaque parte orationis *arsis* est *thesis* sunt velut in hac parte *natura*: ut quando dico *nata*, elevatur vox est *arsis* in *tu*; quando vero *ra*, deprimitur vox, est *thesis*.” Any one would conclude, from this description of the rising and falling of the voice upon this word, that it could only be pronounced one way, and that

cent and quantity, by making the acute accent and long quantity signify the same; while Michaelis, Melancthon, Forster, Primat, and many other men of learning, produce clouds of witnesses from the ancients to prove that accent and quantity are essentially different. † The only thing they seem to agree in is, that the acute accent always raises the syllable on which it is placed higher than any other in the word. § This is certainly true, in English pronunciation, if we pronounce the word singly, and terminate it as if no other were to follow; but if we pronounce it in a sentence, where it is the last accent beginning with a verb, when we suspend the voice in expectation of an answer, we then find the latter syllables of the word, though unaccented, are pronounced higher than the accented syllable in the former part of the word. — See No. 7.

21. But what are we to think of their saying that every monosyllable is either accented or circumflexed? || If the acute accent signify an elevation of voice, this, with respect to words of one syllable, must mean elevated above some other word either preceding or succeeding, since elevation is a mere comparative word; but this is not once mentioned by them; if it have any meaning, therefore, it must imply that the acute accent is the monosyllable, pronounced with, what I should call, the *rising inflection* or *upward slide*; and then we can comprehend how a monosyllable may have the acute accent without reference to any other word; as when we begin a syllable low, and slide it higher, or begin it high, and slide it lower, it may be said to be acute or grave of itself; that is, when it is pronounced alone, and independent of other words. Unless we adopt this definition of the acute and grave, it will be impossible to conceive what the old grammarians mean when they speak of a monosyllable having the grave or the acute accent. Thus Diomedes says, on some words changing their accent, — “*Si post cum gravi pronunciatu accentu, erit præpositio; si acuto, erit adverbium, ut longo post tempore veni*.”

22. It was a canon, in the prosody of the Greeks and Romans, that words of more than one syllable must have either an acute or a circumflex accent; and that the other syllables, without an accent, were to be accounted grave; but if this be so, what are we to think of those numerous monosyllables, and the final syllables of those dissyllables, that we may see marked with the grave accent, as, *Mis, rōs, pēs, Θός, Άσπης, κ. τ. λ.* ‡ “Why, these words,” says Mr. Forster, “whatever Dr. Gally may conceive, had certainly their elevation on the last syllable;” and this opinion of Mr. Forster is supported by some of the most respectable authorities. ¶

23. With respect to the power of the accent in both the Greek and Latin languages, nothing can be better established by the ancient grammarians, than that the acute accent did not lengthen the syllable it fell upon, and that short syllables, remaining short, had often the acute accent. This opinion has been irrefragably maintained by Mr. Forster,** and the author of “Observations on the Greek and

there was no difference in the comparative height of the vowel *u*, in the two following sentences: —

“Lucretius wrote a book *De Rerum Natura*.”

“Lucretius wrote a book *De Natura Rerum*.”

Whereas it is evident that the word *natura* is susceptible of two different pronunciations: in the first sentence the syllable *tu* is louder and higher than the last; and in the second it is louder and lower than the last; and this confounding of loud with high, and soft with low, seems to be the great stumbling-block both of ancients and moderns. — See No. 7, 8, &c.

¶ “*Ea vero, quæ sunt syllabæ unius, erunt acuta aut flexa; ne sit aliqua vox sine acutâ.*” *Quinct. lib. i. c. 5.*

¶ The seeming impossibility of reconciling accent and quantity made *Herman Vanderhardt*, the author of a small treatise entitled *Arcanum Accentuum Græcorum*, consider the marks of Greek accentuation as referring not to syllabic, but oratorical, accent. But, as Mr. Forster observes, “If this supposition were true, we should not meet with the same word constantly accented in the same manner as we see it at present. A word’s oratorical accent will vary according to the general sentiment of the passage wherein it occurs; but its syllabic accent will be invariably the same, independent of its connection with other words in the same sentence, except in the case of enclitics and a few others.” — *Essay on Accent and Quantity*, p. 25.

** But when Mr. Forster endeavors to explain how this is to be done, he has recourse to music: —

“Notwithstanding the reluctance of Vossius, Henninius, and thousands after them, to admit the acute as compatible with a short time, if I could have them near me, with a flute in my hand, or rather with an organ before us, I would engage to convince them of the consistency of these two. I would take any two keys next to each other, one of which would consequently give a sound lower than the other: suppose the word *αἶθε* before us, or *ἀνοσταν*; both which words Vossius would circumflex on the penultimate, in-

Latin Prosodies," though as strenuously denied by Dr. Gally,* Isaac Vossius, and Henningius; and these last seem to have been persuaded of the inseparable concomitancy of the acute accent and long quantity, from the impossibility they supposed there was of separating them in any language. But if we make our ears, and not our eyes, judges of quantity, can any thing be more palpable than the short quantity of the accented syllables of *próselyte, ánodyne, tribune,* and *innate,* and the long quantity of the final syllables of these words? And when we pronounce the Greek and Latin words, *σφάλλο, fallo, áμφο, ambo,* nothing can be more evident than the long quantity of the final vowel, though without the accent, and the short quantity of the initial and accented syllable.

24. As to the long quantity arising from the succession of two consonants, which the ancients are uniform in asserting, if it did not mean that the preceding vowel was to lengthen its sound, as we should do by pronouncing the *a* in *scatter* as we do in *skater*, (one who skates,) I have no conception of what it meant; for if it meant that only the time of the syllable was prolonged, the vowel retaining the same sound, I must confess as utter an inability of comprehending this source of quantity in the Greek and Latin as in English. *Banish, banner, and banter,* have, to our ears, the first syllable equally short; the same may be observed of *senate, seminary, sentence, and sentiment;* and if, as an ingenious critic † has asserted, the ancients pronouncing both the consonants in *callidus, fallo, &c.*—that is, finishing one *l*, by separating the tongue from the palate, before the other is begun,—such a pronunciation must necessarily augment the number of syllables, nearly as if written *callidus, falelo, &c.*, and is therefore contrary to all the rules of ancient prosody; nor would this pronunciation to our ears give the least length to the preceding vowel, any more than the succeeding mute does in *sentence* and *sentiment*.

25. When these observations on the accent and quantity of the ancients are all put together, shall we wonder that the learned and ingenious author of "Elements of Criticism" § should go so far as to assert that the dactyls and spondees of hexameter verse, with respect to pronunciation, are merely ideal, not only with us, but that they were so with the ancients themselves? Few, however, will adopt an opinion which will necessarily imply that the Greek and Latin critics were utterly ignorant of the nature of their own language; and every admirer of those excellent writers will rather embrace any explanation of accent and quantity, than give up Dionysius of Halicarnassus, Cicero, Quintilian, and Longinus. Suppose then, as a last refuge, we were to try to read a Greek or Latin verse, both by accent

stead of giving an acute to the first, according to our present marks; I would, conformably to these marks, just touch the higher key for the initial *á*, and take my finger off immediately; and then touch the lower key, on which I would dwell longer than I did on the higher, and that would give me a grave with a long time for the syllable *ei*; the same lower key I would just touch again, and instantly leave it, which would give me a grave with a short time for *de*: *aeiúe*. Now, if this can be done on a wind instrument, within the narrow compass of two notes, it may be done by the organs of human speech, which are of the nature of a wind instrument, in ordinary pronunciation. For the sounds of our voice, in common speech, differ from those of such musical instruments, not in *quality*, but in arithmetical discrete quantity or number only, as hath been observed before, and is confirmed by the decisive judgment of that nice and discerning critic, Dionysius of Halicarnassus. Here then is, to demonstration, an acute tone consistent with a short time, and a grave tone with a long one." pp. 342, 343. To this I may add the observation made by the author of the "Essay on the Harmony of Language:" "Strange it seems, that the author of this passage should maintain an opinion so contrary to truth, so repugnant to his own purpose, so belied by daily and hourly experience, as that the union of the acute tone with a short quantity seldom occurs in English pronunciation, and is hardly practicable by an English voice." And still more strange, I may add, is it, that these two authors should not see that the experiment, which is called a demonstration, has nothing to do with the point in question. It regards tones that rise or fall by perceptible intervals, and not such as rise or fall by slides or imperceptible ones. Let it once be allowed that the Greeks and Romans sung their language, instead of speaking it, and then the acute or grave accent, with long or short quantity, is easily conceived; but it is not about musical, but speaking tones that we inquire; and though the authority of Dionysius of Halicarnassus is cited for the nature of the speaking voice, as distinct, in degree only, and not in kind, from singing, I boldly assert that this is not matter of authority, but of experiment, and that singing and speaking are as distinct as motion and rest. It is true, some motion may be so slow as not to be perceived; but then it is to be considered as rest; as a curve may approach so near to a right line as not to be distinguishable from it; but in these

and quantity, in the manner they have prescribed, and see what such a trial will produce.

26. By quantity, let us suppose the vowel lengthened to express the long quantity; and by the acute accent, the rising inflection, as explained above.

27. Now there are but four possible ways of pronouncing these verses without going into a perfect song; || one is, to pronounce the accented syllable with the falling inflection, and the unaccented syllable with the same inflection in a lower tone, which is the way we pronounce our own words when we give them the accent with the falling inflection; the second is, to pronounce the accented syllable with the rising inflection, and the unaccented syllables with the same inflection in a lower tone, which we never hear in our own language; the third is, to pronounce the accented syllable with the falling inflection, and the unaccented syllables with the rising, in a lower tone; and the fourth, to pronounce the accented syllable with the rising inflection, and the unaccented with the falling, in a lower tone. None of these modes but the first and last do we ever hear in our own language; the second and third seem too difficult to permit us to suppose that they could be the natural current of the human voice in any language. The first leaves us no possible means of explaining the circumflex; but the last, by doing this, gives us the strongest reason to suppose that the Greek and Latin acute accent was the rising inflection, and the grave accent the falling inflection, in a lower tone.

28. But if the reader were sufficiently acquainted with these inflections of voice, or could be present while I exemplified them to him, I doubt not that he would immediately say it was impossible so monotonous a pronunciation.

cases, where the senses, and not the understanding, are addressed, things are to be estimated for just what the senses value them at. *De non apparentibus, et de non existentibus, eadem est ratio.*

* If the acute accent, or stress, as Dr. Gally calls it, made the short syllable long, what becomes of the metre of verse? How will he scan "Arma virumque cano"?

† If the double consonants naturally made a syllable long, I should be glad to know how there could be exceptions to this rule. How could Ammonius say that the second syllable of *κάταμα* was long, when the word was used in one particular sense, and short in another? And how could Cicero say that the first letter of *inclutus* was short, and the first of *insanus* and *infelix* long, if two succeeding consonants naturally lengthened the syllable? Dr. Forster, indeed, attempts to reconcile this contradiction, by observing that Cicero does not say the first syllable of *inclutus* is short, but the first letter; but it may be demanded, What is it that makes the syllable long or short, but the length or shortness of the vowel? If the double consonants necessarily retard the sound of the vowel, the second syllable of *κάταμα*, and the first of *inclutus*, could not possibly be pronounced short; and particularly the latter word could not be so pronounced, as it has the accent on the first syllable. See sect. 16, in the Note.

|| This, I may be bold to say, is coming to the point at once, without hiding our ignorance, by supposing that the ancients had some mysterious way of pronouncing, which we are utterly incapable of conceiving. Mr. Sheridan tells us that "the ancients did observe the distinction of accents by an elevation and depression of voice; but the manner in which they did it must remain for ever a secret to us; for with the living tongue perished the tones also, which we in vain endeavor to seek for in their visible marks."—*Lectures on Elocution*, 4to. edition, p. 39. From these—and similar observations in many of our writers, one would be tempted to imagine that the organs of speaking in ancient Greece and Rome were totally different from those of the present race of men in Europe.

could be that of the Greeks and Romans;* but when we consider the monotony of the Scotch, Welsh, and Irish, why should we wonder that other nations should be as monotonous? Let us view the Greek and Latin pronunciation on which side we will, we must, to be consistent with their own rules, feel them to be extremely monotonous. According to the laws of ancient prosody, every unaccented syllable must be lower than that which is accented; and if so, a most disagreeable monotony must necessarily ensue; for as every word in Latin, and almost every word in Greek, of more than one syllable, ended with the grave accent,—that is, in a lower tone than the preceding syllables,—almost every word in those languages ended with the same tone, let that tone have been what it would.†

29. I am supported in this conjecture, notwithstanding all the fine things‡ the ancients, and many of the moderns, say of the variety and harmony of the Greek and Latin languages, by the definition which they give of the circumflex accent; which is, that it was a combination of the acute and grave upon the same syllable. This is so incomprehensible to modern ears, that scarcely any one but the author of the present Observations has attempted to explain it by experiment. It stands for nothing but long quantity in all our schools; and, contrary to the clearest testimonies of antiquity, it has, by Dr. Gally,§, and a late respectable writer on the “Greek and Latin Prosodies,” been explained away into nothing more than the acute accent. But if it means a raising and falling of the voice upon the same syllable, which is the definition the ancients uniformly give of it, it is just as easy to conceive as raising and falling the voice upon successive syllables; or, in other words, as going from a lower tone to a higher upon one syllable, and from a higher to a lower upon the next; and this consideration leads me to conjecture that the acute accent of the ancients was really the rising inflection, or upward slide of the voice; for this being once supposed, nothing is so easy as to demonstrate the circumflex in our own language, which,

* Dr. Burney tells us that Meibomius, the great and learned Meibomius, when prevailed upon, at Stockholm, to sing Greek strophes, set the whole court of Christina in a roar, as Naudé did in executing a Roman dance. And Scaliger observes, that if the nice tonical pronunciation of the ancients could be expressed by a modern, it would be disagreeable to our ears.

† This is certainly too general an assertion, if we consider the real pronunciation of the Greek language according to accent; as it must be allowed that a great number of Greek words were accented with the acute or circumflex on the last syllable. But when we consider the modern pronunciation of Greek, which confounds it with the Latin, we shall not have occasion to recall the assertion. To which we may add, that those words in Greek that were circumflexed on the last syllable, may very properly be said to end with the grave accent; and that those which had a grave upon the final syllable altered the grave to an acute only when they were pronounced alone, when they came before an enclitic, or when they were at the end of the sentence.

‡ The Grecian sage, (says Dr. Burney,) according to Gravina, was at once a philosopher, a poet, and a musician. “In separating these characters,” says he, “they have all been weakened; the system of philosophy has been contracted; ideas have failed in poetry, and force and energy in song. Truth no longer subsists among mankind; the philosopher speaks not, at present, through the medium of poetry, nor is poetry heard any more through the vehicle of melody.”—“Now, to my apprehension,” says Dr. Burney, “the reverse of all this is exactly true; for, by being separated, each of these professions receives a degree of cultivation which fortifies and renders it more powerful, if not more illustrious. The music of ancient philosophers, and the philosophy of modern musicians, I take to be pretty equal in excellence.”—*History of Music*, vol. i. p. 162. Here we see good sense and sound philosophy contrasted with the blind admiration and empty flourish of an overgrown schoolboy concluding his theme.

§ “Dissertation against Greek Accents,” p. 53.

|| To add to our astonishment, that the Greek and Latin languages had but one circumflex, what can be more wonderful than that, among so many of the ancients who have written on the causes of eloquence, and who have descended to such trifling and childish observations upon the importance of letters and syllables, we should not find a single author who has taken notice of the importance of emphasis upon a single word? Our modern books of elocution abound with instances of the change produced in the sense of a sentence by changing the place of the emphasis; but no such instance appears among the ancients; not one poor *Will you ride to town to-day?*

Our wonder will increase, when we consider that the ancients frequently mention the different meaning of a word as it was differently accented; that is, as the acute or circumflex was placed upon one syllable or another; but they never hint that the sense of a sentence is altered by an em-

phasis being placed upon different words. The ambiguity arising from the same word being differently accented is so happily exemplified by the author of the “Greek and Latin Prosodies,” that I shall use his words: “*Alexander Aphrodisiensis* illustrates this species of sophism by a well-chosen example of a law in which the sense depends entirely upon the accuracy of accentuation. *Ἐραία χρυσία εἰ ἑσπέρην ἀνυπόστα ἔρω.* The word *ἀνυπόστα*, with the acute accent upon the antepenult, is the neuter nominative plural, in apposition with *χρυσία*. And the sense is, ‘if a courtesan wear golden trinkets, let them (viz., her golden trinkets) be forfeited to the public use.’ But if the accent be advanced to the penult, the word, without any other change, becomes the feminine nominative singular, and must be taken in apposition with *ἔραία*. And thus the sense will be, ‘if a courtesan wear golden trinkets, let her become public property.’ This is a very notable instance of the political importance of accents, of written accents, in the Greek language. For if this law had been put in writing, without any accent upon the word *ἀνυπόστα*, there would have been no means of deciding between two constructions, either of which the words, in this state, would equally have admitted; and it must have remained an inexplicable doubt, whether the legislator meant that the poor woman should only forfeit her trinkets, or become a public slave.”

¶ We have the strongest proof in the world, that the ancient Greeks made use only of capital letters, that they were utterly ignorant of punctuation, and that there was not the least space between words or sentences, but that there was an equal continuation of letters, which the reader was obliged to decipher, without any assistance from points or distances. Without the clearest evidence, could we suppose that, while composition had reached the perfection it had done in Greece, orthography was in a state of barbarity worthy of the Cape of Good Hope?

Can any thing give us a more ludicrous idea than the practice of the ancients in sometimes splitting a word at the end of the line, and commencing the next line with the latter part of the word? This must have been nearly as ridiculous as the following English verses, in imitation of this absurd practice:—

Pyrrhus, you tempt a danger high,
When you would steal from angry li-
Oness her cubs, and soon shall fly
inglorious.

For know the Romans, you shall find
By virtue more and generous kind-
Ness, than by force or fortune blind,
victorious.

Notwithstanding the hackneyed epithet of Gothic barbarity applied to verse in rhyme, is it not wonderful that a species of versification, approved by Italy, France, and England, in their best periods of poetry, should never once have been tried by the Greeks and Romans?—that they should never have straggled, either by chance or for the sake of change

people, who, though remarkably excellent in some things, are surprisingly deficient in others? So true is the observation of Middleton, who, speaking of those who have written on the pronunciation of the Greek and Latin languages, says, "Ab illis verò scriptoribus etsi plurima ingeniosè atque eruditè disputata sunt, nonnulla tamen deesse, multa dubiè, quædam etiam falsò posita animadverti; idque hæc in causâ accessisse, quod in cæteris plerisque solet, ut mortaliùm nemini detur rem invenisse simul et percipisse."—*De Lat. Lit. Pronun.*

32. That singing a part in a tragedy should seem so unnatural * to us, arises chiefly from our being so little accustomed to it. Singing in the pulpit seems to the full as extraordinary; and yet this song was so powerful about a century or two ago, and later in Scotland, † as to make mere speaking, though with the utmost energy, appear flat and insipid. Let the human voice be but in a fine tone, and let this tone be intensely impassioned, and it will infallibly, as Milton expresses it,

"——— take the prisoned soul,
And lap it in Elysium ———"

33. What may tend to reconcile us still more to this dramatic music, is the *sing-song* manner, as it is called, of pronouncing tragedy, which very generally prevailed before the time of Mr. Garrick, and which now prevails among some classes of speakers, and is preferred by them to what we call the more natural manner. This drawing, undulating pronunciation is what the actors generally burlesque by repeating the line,

Tum ti tum ti, tum ti tum ti tum ti;

and though this mode of declamation is now so much de-

into so pleasing a jingle of sounds? They who would write poems, and so lengthen or shorten the lines as to form axes, wings, and altars, might, without any imputation on their taste, have, now and then, condescended to rhyme. In short, that the ancients should never have slid into rhyme, is a circumstance which would never have been believed, had it been possible to doubt it; and I fear it must be classed with that long catalogue of unaccountables, with which their prosody, their rhetoric, and their drama, abound.

* Perhaps our unwillingness to believe that the ancient dramas were set to music, arises from a very mistaken notion we have of their skill in that art. It is true we have not the same materials for judging of their music as we have of their poetry and sculpture; but their ignorance of counterpoint, and the poverty of their instruments, sufficiently show what little progress they had made in it. Those very few remains of their music which have reached us, confirm us in this conjecture; and it is to the indefatigable pains of so good a scholar and so excellent a musician as Dr. Burney, that we are indebted for an illustration of it.

† At the end of a Greek edition of the astronomical poet Aratus, called *Phænomena*, says Dr. Burney, "and their Scholia, published at Oxford in 1702, the anonymous editor, supposed to be Dr. John Fell, among several other pieces, has enriched the volume with three hymns, which he supposed to have been written by a Greek poet called Dionysius; of which the first is addressed to the muse Calliope, the second to Apollo, and the third to Nemesis; and these hymns are accompanied with the notes of ancient music to which they used to be sung.

"I know not whether justice has been done to these melodies; all I can say is, that no pains have been spared to place them in the clearest and most favorable point of view; and yet, with all the advantages of modern notes and modern measures, if I had been told that they came from the Cherokees or the Hottentots, I should not have been surprised at their excellence.

"I have tried them in every key and in every measure that the feet of the verses would allow; and as it has been the opinion of some that the Greek scale and music should be read Hebrew-wise, I have even inverted the order of the notes, but without being able to augment their grace and elegance. The most charitable supposition that can be admitted concerning them is, that the Greek language, being itself accentuated and sonorous, wanted less assistance from musical refinements than one that was more harsh and rough; and music being still a slave to poetry, and wholly governed by its feet, derived all its merit and effects from the excellence of the verse, and sweetness of the voice that sung, or rather recited it; for ineffectual and affecting verses nature bestows, from time to time, on some gifted mortals in all the habitable regions of the earth; and even the natural effusions of these must ever have been heard with delight. But, as music, there needs no other proof of the poverty of ancient melody, than its being confined to long and short syllables. We have some airs of the most graceful and pleasing kind, which will suit no arrangement of syllables to be found in any poetical numbers, ancient or modern, and which it is impossible to express, by mere syllables, in any language with which I am at all acquainted."

spised, it is highly probable that it was formerly held in estimation. †

34. Now, if we suppose this drawing pronunciation, which, though very sonorous, is precisely *speaking*, and essentially different from singing; — if we suppose this to have been the conversation pronunciation of the Greeks and Romans, it may possibly throw some light upon the manner in which they pronounced by accent and quantity at the same time; for though we can sufficiently conceive that, in common speaking in our own language, we can make the accented syllable short, and the unaccented syllable long, as in the words *qualify, specify, elbow, inmate*, &c., yet in the drawing pronunciation we have been speaking of, the long unaccented vowels in these words are made much longer, and consequently more perceptible.

35. But if the accent of our language be so different from that of the Greek and Latin, our pronunciation must necessarily be very different likewise. The acute accent of the ancients being always higher than either the preceding or succeeding syllables, and our accent, though always higher than the preceding, being sometimes lower than the succeeding syllables, (see sect. 7,) there must certainly be a wide difference between our pronunciation and theirs. Let us, however, explain the Greek and Latin accent as we will, — let it be by singing, drawing, or common speaking, — it will be impossible to tell how a monotony could be avoided, when almost every word of more than one syllable in these languages, must necessarily have ended in the same tone, or, if you will, with the same grave accent. §

36. After all, that the Greeks and Romans, in explaining the causes of metrical and prosaic harmony, should sometimes descend to such minute particulars || as appear to us

Dr. Burney's conjecture, that the Greek music was entirely subservient to verse, accounts for the little attention which was paid to it in a separate state; it accounts for the effects with which their music was accompanied, and for the total uselessness of counterpoint. Simple melody is the fittest music to accompany words, when we wish to understand what is sung: simple melody is the music of the great bulk of mankind; and simple melody is never undervalued till the ear has been sufficiently disciplined to discover the hidden melody, which is still essential to the most complicated and elaborate harmony.

† The Rev. Mr. Whitefield was a highly animated and energetic preacher, without the least tincture of that tone which is called *canting*. When he went to Scotland, where this tone was in high estimation, though his doctrine was in perfect unison with that of his auditors, his simple and natural, though earnest, manner of speaking was looked upon, at first, as a great defect. He wanted, they said, the holy tone.

‡ This cant, which, though disgusting now to all but mere rustics, on account of its being out of fashion, was very probably the favorite modulation in which heroic verses were recited by our ancestors. So fluctuating are the taste and practices of mankind! But whether the power of language have received any advantage from the change just mentioned, (namely, pronouncing words in a more simple manner,) will appear at least very doubtful, when we recollect the stories of its former triumphs, and the inherent charms of musical sounds. — *The Art of delivering Written Language*, p. 73.

§ Where was all that endless variety with which the moderns puff off the Greek language, when it had but one circumflex? The human voice is just as capable of falling and rising upon the same syllable as rising and falling; and why so palpable a combination of sounds as the former should be utterly unknown to the Greeks and Latins, can be resolved into nothing but (horresco referens!) their ignorance of the principles of human speech.

|| "Nec illi [Demostheni] turpe videbatur vel optimis relictis magistris ad canes se conferre, et ab illis *l* iterum viam et naturam petere, illorumque in sonando, quod satis esset, morem imitari." — *Ad. Mækerk. de vet. et rect. Pron. Ling. Græcæ*, p. 14.

It is an observation of Chambers, author of the "Cyclopaedia," that nonsense sounds worse in the English than in any other language. Let us try the experiment by translating the above passage; — Nor did Demosthenes think it below him to leave the company of the most respectable people of Athens, and go to the dogs, in order to learn from them the nature of the letter *r*, and, by observing the sound they gave it, to imitate, as much as was necessary, their manner of pronouncing it.

What encomiums do we meet with in Cicero, on the delicacy of the ears even of the common people of Rome, who, if an actor on the stage made the least error in accent or quantity, were immediately sensible of it, and would express their disapprobation! But I am apt to think that an English actor, who should pronounce *théâtre, sénator, or conquêt*, with the accent on the second syllable, would not escape better than the Roman.

trifling and imaginary, and at the same time neglect things which appear to us so essential; that they should be so dark, and sometimes so contradictory, in their account of accent and quantity, as to furnish opposite systems among the moderns, with ample quotations in favor of each;—is this more wonderful than that Mr. Sheridan,* who was so good an actor, and who had spent so much time in studying and writing on elocution, should say that accent was only a louder pronunciation of the accented syllable, and not a higher. But as this same Mr. Sheridan, in his *Art of Reading*, has excellently observed, that our perception of Latin quantity is imaginary, and arises not from the ear, but only from association, like spelling, so it may be observed, that the confusion and obscurity which reign among all our writers on accent and quantity, seem to arise from an ideal perception of long quantity produced by double consonants; from confounding stress and quantity, which are so totally

* "The Scotchman utters the first syllable of *battle*, *bor-rov*, *habit*, in the middle tone, dwelling on the vowel; and the second with a sudden elevation of the voice, and short; as, *bā-tle*, *bā-v-rō*, *hā-bit*. The Englishman utters both syllables without any perceptible change of tone, and in equal time; as, *bat'tle*, *bor'rov*, *hab'it*."—*Art of Reading*, p. 77. The smallest degree of attention might have taught Mr. Sheridan that, though this is the prevailing, it is not the invariable, pronunciation of a Scotchman; and that this elevation of voice, though more perceptible in a Scotchman, from his drawing out his tones, is no less real in an Englishman, who pronounces them quicker, and uses them less frequently; that is, he mixes the downward inflection with them, which produces a variety. But these two inflections of voice Mr. Sheridan was an utter stranger to.—See *Elements of Elocution*, part ii. p. 183.

† Nothing is more fallacious than that perception we seem to have of the sound of words being expressive of the ideas, and becoming, as Pope calls it, *an echo to the sense*. This coincidence, as Dr. Johnson observes in one of his *Rambles*, seldom exists any where but in the imagination of the reader. Dryden, who often wrote as carelessly as he thought, and often thought as carelessly as he lived, began a commendation of the sweetness and smoothness of two lines of Denham in praise of the Thames—

different; and from mistaking loud for high, and soft for low, contrary to the clearest definitions of each.†

37. But till the human voice, which is the same in all ages and nations, be more studied and better understood, and till a notation of speaking sounds be adopted, I despair of conveying my ideas of this subject with sufficient clearness upon paper. I have, however, marked such an outline as may be easily filled up by those who study speaking with half the attention they must do music. From an entire conviction that the ancients had a notation of speaking sounds, and from the actual experience of having formed one myself, I think I can foresee that some future philosophical inquirer, with more learning, more leisure, and more credit with the world, than I have, will be able to unravel this mystery in letters, which has so long been the *opprobrium et crux grammaticorum*,—the reproach and torment of grammarians.

"Though deep, yet clear, though gentle, yet not dull;
Strong without rage, without o'erflowing full;"

and this commendation of Dryden's has been echoed by all subsequent writers, who have taken it for granted that there is a flow in the lines similar to that of the object described; while the least attention to those stops so necessary on the accented and antithetic words will soon convince us that, however expressive the lines may be, they are as rugged and as little musical as almost any in the language.

A celebrated critic observes, "I am apt to think the harmony of the verse was a secret to Mr. Dryden; since it is evident he was not acquainted with the cæsural stops, by which all numbers are harmonized. Dr. Bentley has observed, the beauty of the second verse consists in the *ictus* that sounds on the first syllable of the verse, which, in English heroics, should sound on the second; for this verse is derived from the *Trimeter Iambic*, *Brachycatalectic*."—*Manwaring's Söchology*, p. 71.

When I read such profound observations in such learned terms, it brings to my mind the Mock Doctor in the farce, who shines away to the illiterate knight, by repeating *Propria que maribus*, &c., and makes him most pathetically exclaim, "O, why did I neglect my studies!"

THE
PRONUNCIATION
OF
MODERN GEOGRAPHICAL NAMES.

REMARKS

ON THE

PRONUNCIATION OF MODERN GEOGRAPHICAL NAMES.

THE pronunciation of geographical names is a very difficult branch of orthoëpy. These names pertain to all parts of the globe; their vernacular or native pronunciation is regulated or affected by every variety of language; and it would be impossible to represent, in all cases, the native pronunciation by any combination of English letters.

There are a great many names, respecting the pronunciation of which it is difficult to determine how far the English analogy should be allowed to prevail over the analogy of the languages to which the words respectively belong. If we look for authorities for the pronunciation of these names, we find comparatively few; and such authorities as exist embrace but a small part of the words of this class; and there is also much disagreement among orthoëpists with respect to the pronunciation of such of these names as they undertake to pronounce.

With regard to the geographical names which pertain to all the countries in which the English language is spoken, including the British empire in Europe, the United States, and the British provinces generally, their pronunciation is, of course, conformed, for the most part, to the analogy of the English language. In addition to these, all the geographical names which belong to other parts of the globe, but which have become Anglicized by having changed their native form and assumed an English orthography, are also conformed to the general principles of English pronunciation. The most common geographical names, such as those which relate to the great divisions of the globe, the names of the countries, kingdoms, states, principal cities, &c., are differently written, as well as differently pronounced, in different languages. The following table exhibits a few examples of this diversity, by way of illustration:—

<i>English.</i>	<i>French.</i>	<i>German.</i>	<i>Spanish.</i>	<i>Italian.</i>
Asia,	Asie,	Asien,	Asia,	Asia.
Africa,	Afrique,	Afrika,	Africa,	Africa.
Europe,	Europe,	Europa,	Europa,	Europa.
America,	Amérique,	Amerika,	America,	America.
England,	Angleterre,	England,	Inglaterra,	Inghilterra.
Spain,	Espagne,	Spanien,	España,	Spagna.
Germany,	Allemagne,	Deutschland,	Alemania,	Germania.
Italy,	Italie,	Italien,	Italia,	Italia.
Austria,	Autriche,	Oesterreich,	Austria,	Austria.
Sweden,	Suède,	Schweden,	Suecia,	Svezia.
London,	Londres,	London,	Londres,	Londra.
Naples,	Naples,	Napoli,	Napoles,	Napoli.
Leghorn,	Livourne,	Livorno,	Liorna,	Livorno.

There can be no doubt but that geographical names, which assume such different forms in different languages, should be pronounced differently by the inhabitants of different countries, and in accordance with the analogies of their respective languages. All the common geographical names, such as are familiar to all intelligent persons, have become more or less Anglicized, and their pronunciation is more or less conformed to the English analogy. Many of these words may be considered as perfectly Anglicized, and are pronounced as common English words; but there are many that are only partially Anglicized, and with regard to such, it is often difficult to determine how far, in pronouncing them, the English analogy should be allowed to prevail over that of the language to which the words properly belong.

Some foreign geographical names are introduced into the English language without changing their orthography, but are, nevertheless, in their pronunciation, conformed to the English analogy. The word *Paris*, for example, an Englishman or an Anglo-American, in speaking his own language, would pronounce, in conformity to it, *Par'is*; though, if he were speaking French, he would pronounce it *pär-é*, in conformity with the French language.

With respect to the class of words which are partially Anglicized, there is a great diversity in the manner of pronouncing them. Some respectable speakers incline to pronounce them, for the most part, according to the English analogy, while others aspire to pronounce them as they are pronounced in the several languages to which they appertain; and there are many cases in which it is difficult to determine which is most to be approved, the English or the foreign method; but a medium between the two extremes may be regarded generally as a judicious course. A person conversant with foreign languages will be likely to pronounce such words in the foreign manner; while a mere English scholar may be naturally expected and permitted to incline more strongly to the English mode. It may be often desirable to know what the native mode of pronouncing such words is, though it may not be advisable, in common use, to adopt it.

Proper names are more subject to a corrupt pronunciation, or one which is not conformed to the orthography, than common names. A considerable number of the geographical names pertaining to England are pronounced very differently from what their orthography indicates; as, for example, *Chertsey* and *Cirencester*, pronounced *ches'se* and *sis'e-ter*. Americans are somewhat less inclined to deviate from orthography, in the pronunciation of some words, than the English are. *Berwick* and *Warwick*, for example, which are pronounced in England *ber'ik* and *wor'ik*, are very often pronounced, in the United States, as they are spelled.

The following Vocabulary was prepared some years since, and annexed to the *Comprehensive Dictionary*, and to the *Elements of Geography*, of the author. It has now been somewhat enlarged and improved, by further inquiry, and by the examination of various new authorities, particularly Mr. Baldwin's *Universal Pronouncing Gazetteer*, a work in which the subject of the pronunciation of geographical names has been attended to with much care and intelligence. Still this Vocabulary, in its present state, is very imperfect. The pronunciation affixed to many of the words may be objected to, as not the most proper. A person much versed in foreign languages will be likely to think that the pronunciation generally has been too much Anglicized; while a mere English scholar will think it is not sufficiently so; and both may doubtless make out a plausible case in favor of their respective views. But, defective as it is, it is hoped that it will not be found a useless appendage to a pronouncing dictionary.

PRINCIPLES

OF

PRONUNCIATION OF SEVERAL EUROPEAN LANGUAGES.

THE following Rules, respecting the pronunciation of certain letters in the principal modern languages of continental Europe, may be of some use in relation to the pronunciation of names pertaining to the several countries where these languages are spoken, though it may be advisable for a mere English scholar to make but a partial application of them in practice.

VOWELS.

A.—The vowel *a*, in situations in which the analogy of the English language would naturally give it the sound of long *a*, has, in the languages of the continent of Europe, what is called the *Italian* sound, that is, the sound of *a* in *far* and *father*. In other situations, its sound approaches nearly to its short English sound, in *man*, *fat*.

E.—The sound of the vowel *e*, at the end of an accented syllable, is the same as that of the English long *a*, in *fate*, *name*. In other situations, it has the sound of the English short *e*, in *met*, *men*.

I.—The long sound of *i*, in these languages, is the same as in the English word *marine*, being the same as the English sound of long *e* in *mete*, *seen*. The short sound is the same as its English short sound in *pin*.

O.—The vowel *o* has the same sounds that it has in English in the words *note*, *not*, and *nor*.

U.—The vowel *u*, in most of these languages, has the same sound that it has in English in the word *rule*, being the same as *oo* in *fool*, *moon*; and when short, it has the sound of *u* in *bull*, or of *oo* in *good*. The sound of *u*, in the French language, and also in the Dutch, has no equivalent sound in English; and it can be learned only by oral instruction. It may be regarded as inter-

mediate between the sound of long *e* and *oo*, partaking of both.

Y.—The vowel *y* has, in most of these languages, the same sound as *i*, that is, of long *e*, as in *me*; but in the Dutch language, it has the sound of the English long *i*, in *pine*.

DIPHTHONGS.

AE or *Æ*.—The sound of the diphthong *æ*, in Dutch, is like the English sound of *a* in *far*; in German, *æ* or *a* like that of the English *a*, in *fate*.

AI.—The sound of the diphthong *ai*, in French, is like that of the English long *a*, in *fate*; in Italian, Spanish, and Portuguese, like that of the English long *i*, in *pine*.

AU and *EAU*.—The diphthong *au*, and the triphthong *eau*, in French, have the sound of the English long *o*, in *note*; as, *Chaumont*, (shō-mōng',) *Beauvais*, (bō-vā'.) In German, Italian, Spanish, and Portuguese, the diphthong *au* has the English sound of *ow* in *now*; as, *Austerlitz*, (ōs'ter-lits.) The German diphthongs *au* and *eu* have a sound like that of the English diphthong *oi*, in *toil*; as, *Neustadt*, (nōi'stāt.)

EI and *EY*.—The diphthongs *ei* and *ey*, in German, have a sound similar to the English sound of long *i*, in *pine*; as, *Leipsic*.

EU.—The French diphthong *eu* has a sound similar to that of the English sound of *e* in *her*, or *u* in *fur*.

IE.—The diphthong *ie*, in French, German, Dutch, &c., has the sound of the English long *e*, in *mete*; as, *Wæ'land*.

UE or *Ü*.—The sound of the German diphthong *ue* or *ü* is like that of the French *u*.

OU.—The French diphthong *ou* has the sound of the English *oo*, in *tool*; as, *Tou-louse*, (tō-lōz'.)

OE or *Ö*.—The sound of the German diphthong *oe* or *ö* resembles that of the French *eu*; but it has no equivalent sound in English, and is not easily explained. It may be conceived, in the name of *Goethe*, or *Göthe*, thus represented, (guët'ta,) pronounced in two syllables, the sounds of *u* and of *e* in *her*, in the first syllable, being blended together.

CONSONANTS.

The sounds of most of the consonants, in the continental languages, are the same as in English. Some of the principal exceptions are the following:—

B.—The sound of *b*, in German, at the end of a word, is like that of the English *p*;—in Spanish, between two vowels, similar to *v*.

C.—The sound of *c*, in German, before *e*, *i*, and *y*, is like that of *ts* in English;—in Italian, before *e* and *i*, like that of *ch* in the English word *chill*;—in Spanish, before *e* and *i*, like that of *th* in *thin*.

D.—The sound of *d*, in German and Dutch, at the end of a word, is like that of *t* in English;—in Danish and Spanish, between two vowels or at the end of a syllable, like that of *th* in *this*.

G.—The sound of *g*, in French, before *i*, *e*, and *y*, is like that of *zh* in English;—in Spanish, before *e* and *i*, the same as the Spanish *j*;—in Italian, before *e* and *i*, like that of *g* in the English word *gem*, or *j* in *jet*;—in German, at the beginning of words, it is hard, like *g* in *get*; and in words ending in *gen*, it is thrown back on the penultimate syllable; as, *Hech'ing-en*.

J.—The sound of *j*, in French and Portuguese, is like that of *zh* in English;—in Spanish, it is like that of *h* strongly aspirated;—in the other languages, like that of *y* consonant.

X.—The sound of *x*, in Spanish, is like that of *h* strongly aspirated, being the same as that of the Spanish *j*, and also of *g* before *e* and *i*.

Z.—The sound of *z*, in German and Swedish, is like that of *ts* in English;—in Italian, like *dz*; *zz*, in Italian, like *ts*.

CH.—The sound of the digraph *ch*, in French and Portuguese, is the same as the English *sh*, or of *ch* in *chaise*;—in Spanish, the same as *ch* in the English word *chill*;—in Italian, (as in words from the ancient languages, Hebrew, Greek, and Latin,) like that of *k*.—In German and Dutch, it has a hard, guttural sound, not easily represented in English, but resembling that of *h* strongly aspirated. It is represented in this Vocabulary, as it is in others, by the letter *k*.

TH.—The digraph *th*, in these several languages, has the sound of *t*; as, *Theis*, (tis.)
